# STOCHASTIC

-----

"A process in which  
a sequence of values  
is drawn from a  
CORRESPONDING  
Sequence of jointly  
distributed RANDOM  
Variables"

HORSE RACE HANDICAPPING is a STOCHASTIC endeavor.

It is NOT governed by set rules. It is not an event controlled by man, despite numerous myths to the contrary. The highest percentage of winners achieved by the very BEST JOCKEY or TRAINER averages around 20% per year. Even mediocre Sartin Methodologists can average 60%.

The HORSE runs the race!

Mainstream handicapping procedures have never truly conquered the Stochastic nature of Horse Racing. Velocity and Rate of Velocity concepts have come closest. They are quite adequate for many racing situations. However, procurers of handicapping material are notorious for imitating and pirating anything that is popular or successful.

Since 1983 OURS has been the most imitated method of ALL.

To keep well ahead of the field we have expanded our procedural horizons BEYOND THE LINEAR. We are taking PACE to the final Frontier. To a 2001 PACE ODYSSEY.

ENERGY/KGEN/DECELERATION  
With Thoramation

This Manual is dedicated to all those who are willing to go with us as pioneers of the Final Frontier.

Howard Sartin  
Jim Bradshaw  
January, 1992

# SPENCER TONER

## Abductive Modeling

Spencer Toner, PIRCO researcher, has found a computer program that is based on an innovative new approach to numerical problem solving - abductive modeling. Abductive modeling consists of a novel form of numeric reasoning called abduction and innovative machine learning techniques called abductive induction. These combine to yield a problem solving technology that offers practical solutions to problems which are impractical to solve using other computer methods.

The term abduction was popularized by the philosopher Charles S. Peirce in the late 1800s. Although Peirce's description of abduction and later definitions have differed in various ways, all have centered around the same issue -

reasoning under uncertainty. Uncertainty exists when there is insufficient information to draw conclusions with absolute certainty, as is the case in most problems. It is caused by factors such as missing, noisy, unreliable or contradictory data. Because abductive modeling provides a practical and cost-effective means for solving problems which involve **uncertainty**, it is useful for real-world problems.

Abduction differs from deduction, where decision factors are assumed to be known with complete certainty. Conventional software and expert systems generally perform deduction, and are **unable** to deal effectively with **uncertainty**. Deductive reasoning is performed using true/false and black/white relationships rather than continuous numeric ones. Numeric functions compactly describe complex relationships which could otherwise require many thousands of symbolic rules or decision table entries. Therefore, because abduction involves reasoning using functions, it can often handle much more complexity than deductive methods.

# THE SARTIN METHODOLOGY - TODAY! An overview By Howard G. Sartin, Ph.D

In mid 1991 I sent out a plea to all Sartin Methodology clients to send me their LOSING RACES. I asked for the Past Performance charts with their contenders and pace line choices clearly marked; their computer readouts and Results Charts. Within a few weeks I received over 300 LOSING races. 84% of them were quite winable when ALL the current Methodology principles were applied. Those 300 plus races were divided about equally between VELOCITY and ENERGY/KGEN users. In this treatise I will isolate both the basic and the glaring malpractices I encountered while re-doing those races.

TODAY'S Methodology is focused on concepts derived from ENERGY and DECELERATION. Advancing into these areas is as natural as going from propeller driven aircraft to jets. While our evolution from Velocity to Energy/Deceleration is a natural progression, it was accelerated by the fact that since 1983 our velocity procedures have been copied, pirated and duplicated by every legitimate and nefarious purveyor in the Systems and Methods business.

So, rather than fight against the trend we started with velocity pace, we have, of late, encouraged it in the hope that it will be several years before the Systems carrion pounce again. To this end we encouraged the writing of Tom Brohamer's MODERN PACE HANDICAPPING and participated in the project from which came PACE MAKES THE RACE. These are excellent books. Their scope far exceeds the limitations of computer programs and goes right to the heart of successful handicapping.

The propeller craft of velocity will still get us a plethora of winners but, in light of the above developments, with average mutuels that are considerably lower than those previously enjoyed through the use of Incremental Velocity.

At the Fall 1991 Las Vegas seminar, Tom Brohamer announced that he was entering the jet age of handicapping through his use and demonstration of The Super Match Up program with Thoromation. This program shows certain readouts in Velocity, but internally, utilizes both Energy and Deceleration. Tom's unique abilities do not absolutely require advanced procedures but he finds them easier to use and far less taxing on his energies. He is now less prone to burnout, has more time left to apply his considerable insight to interpretation and is getting higher mutuels.

While most of the following data comes from the perspective of ENERGY/KGEN and Thoromation, the principles discussed are generic to ALL PHASES of the Sartin Methodology as it has evolved from static velocity numbers to the Methodology of TODAY!. I will repeat what I have so often stated:

Advanced programs are designed to make the basic material from the Yellow Manual and subsequent manuals, more clear and precise; AND to reflect the benefits of our ongoing research BEYOND simple velocity. In short, the more ADVANCED the procedure, the LESS complicated the implementation.

Too many clients think in terms of PROGRAMS winning races rather than THEY, THEMSELVES winning races with their Methodology. Once again I beseech ALL clients to view our informational material NOT only from the perspective of a given computer program but from certain basic handicapping truths and contra-mainstream realities inherent in the Methodology itself and NOT found in the works of contemporary experts. Most of these principles are either delineated or implied in the Yellow Manual. Advanced concepts and procedures beyond those in the pages of 'Ol Yaller' are available in ancillary manuals and in The FOLLOW UP, the Bi-Monthly Journal of the Sartin Methodology.

Much of our advanced material was born out of material contained in the Yellow Manual. Unfortunately many clients read that manual only as specific instructions for Phase III and not as a generic work in the structural analysis of winning races.

The true etiology of Successful handicapping lies more in philosophy than in numerical recipes. Many people with the keys to the mint fail to open the door because they refuse to change their basic philosophy.

-----0-----

The dust jacket of Tom Brohamer's MODERN PACE HANDICAPPING states: "There is a revolution going on in the world of Thoroughbred Handicapping..." It goes on to say that WE'RE the revolution. Since it started in 1975 it may go down as history's longest revolution. But apparently the vast majority of North American "horseplayers" are just hearing the first shots.

ENERGY/KGEN and now, DECELERATION, as manifest through THOROMATION, represent the current Evolution of the Handicapping Revolution. Over the past couple of years I have received many calls and letters from clients saying that they barely understood the initial phase of the revolution and "Don't Understand" or are "confused" by many aspects of the Evolution. Such questions are most often directed toward ENERGY/KGEN and their non-linear NUMERICAL readouts, as opposed to the accompanying graphs. Actually the graphs are there to supplant the numbers for those who are numerically blind; the numbers are there to authenticate the graphs for those who are graphically dysloptic.

USUALLY when people say they "CAN'T" understand, they really mean, "WON'T" understand. When they say "confused" about handicapping procedures, they often reveal that they are truly confused by all non cause-effect aspects of life in general. Such reactions typically come from persons who, despite all my teaching and preaching, insist on holding fast to "Horseplayer" mentality; viewing revolutionary concepts from a mainstream frame of reference. That's like watching a technicolor movie from behind eyeglasses tinted to filter out all color so that everything is seen only in black and white. There are still many Methodologists who, despite their protestations to the contrary, are seeking a simplistic, magical formula and persist in playing the game of "Do me something." They should all go back and begin again with Phase I and not try to pass "GO" until they master IT!

Or they should do as YOU have done, get a THOROMATION program which performs ALL the essential interpretations and makes all the decisions for the user -except going to the window and placing the bets.

KGEN'S graphs are merely a more detailed version of the Phase III Compugraph, dividing the race by sixteenths of a mile instead of by only three increments. The program clearly ranks the contenders in over all order on the right side of the graphics screen, so there is really little to understand about the basic KGEN picture. By running each contender's graph slowly you can see how those rankings are achieved. As I have repeatedly stated, a horse getting a high ranking with a big DIP in the middle part of the graph might be suspect.

Eliminating such a horse from contention, regardless of rank, would depend on several factors: primarily the distance of the race and the profile of the track on which the race is being run. By the same token, a horse with a pronounced BULGE in the middle of the graph should be examined further. Much further. Again by distance and track surface.

When we look at the per furlong and per half-furlong numbers we see numbers descending from highs that are in the 20's. I'm asked what do these "20's mean - they're not feet per second, are they?" No, they're not. All you need to know is that high is best. If 21 is high and the next horse is 20.12, what is the difference between them? In your mind you can divide 20.12 by 21. The percentage difference is 4.2%. The numerical difference is .88. Differences are relative regardless of whether the numbers are in the 20's, 50's, 60's or 80's.

So, a portion of this treatise is offered to further help you understand KGEN's many intricacies all of which can be potent weapons in your handicapping arsenal if you will take the trouble to use them. I will also review some basic insights from the Yellow Manual that many seem to have forgotten or are ignoring.

To begin with I ask you to go back in time to your first reading of the Yellow Manual. Beginning on page 34 we discuss PACE of RACE/PACE of HORSE. Let's review two and a half pages in the hope that you will re-read ALL of this section in the Yellow Manual and thoroughly understand its significance.

### P A R T   T H R E E

PACE IS CLASS, IS FORM, IS PACE.....

.....and They are all dependant upon CURRENT CONDITION!

Choosing the proper pace-line from which to rate a horse is the single most important element in this, or any other method. However, unless a horse's current condition is equal to the pace-line, the selection process will suffer. Your computer can quickly and accurately help you determine current condition by plotting a con-

tender's FORM CYCLE. The arbitrary use of final times in plotting form has proven less than satisfactory. Our computerized study of this subject shows that HOW A HORSE RUNS AGAINST THE PACE OF HIS RACES dictates both its Class and Current Condition.

The late Ray Taulbot pioneered the concept that the PACE of the RACE was the class of the race. How a given contender handled the pace of its race became the measure of its class and hence its condition. Only in the case of a wire-to-wire victory is any ONE horse the Pace of the Race. Usually it is shared by two, even three horses. Huey Mahl described the Pace of the Race as an imaginary fly on the nose of the horse that broke the wire at each call. In our efforts to further the concepts of Taulbot and Mahl we have devised a special form that you and your computer can use to graphically project a contender's Pace-class profile. Ironically, the picture is predictive when taken from a race that was NOT a wire-to-wire win.

28 DEC (8TH) 32,000 Cl.

**PACE-FORM-CLASS MEASUREMENT**

| 1 | 2 | 3 | 1+2 | TOTAL/3 |
|---|---|---|-----|---------|
|---|---|---|-----|---------|

CUMP

|       |       |       |      |       |
|-------|-------|-------|------|-------|
| 61.11 | 57.89 | 52.33 | 59.5 | 57.13 |
| 61.11 | 57.88 | 50.1  | 59.4 | 56.30 |

DIFFERENCE IS..... ,83

This is definately not CUMP'S level. Against seasoned \$32,000 winners he has his worst race to date. A pace rating of  $-.83$ . CUMP is now five years old. We still don't know his true class level although we are certain it's not \$32,000. It is probably even less than \$20,000 where he won only because of the Conditions of the Race. The trainer agrees with this assessment and enters CUMP at \$16,000 on February 24.

24 FEB (6<sup>th</sup>) 16,000 CL.

~~PACE-FORM-CLASS MEASUREMENT~~

| 1 | 2 | 3 | 1+2 = TOTAL/3 |
|---|---|---|---------------|
|---|---|---|---------------|

CUMP

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
| 60.55 | 57.39 | 51.56 | 53.27 | 56.5  |
| 60.55 | 57.35 | 50.43 | 53.95 | 56.11 |

DIFFERENCE 13.....0.39

Almost. Only  $-.39$  off the total pace of the race. The trainer now remembers that before his FIRST win, CUMP was only  $-.32$  off the pace. In between these two races CUMP was entered into a route. Possibly to determine if he could go the distance. More likely to toughen him for future sprint efforts. Obviously not a router, let's see if CUMP is tougher. Feeling that CUMP might really be a \$20,000 horse, the trainer tries again at this level on March 5.

6 FEB ROUTE 1 1/4 20,000 CL.

~~PACE-FORM-CLASS MEASUREMENT~~

| 1 | 2 | 3 | 1+2 = TOTAL/3 |
|---|---|---|---------------|
|---|---|---|---------------|

CUMP

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
| 56.9  | 55.15 | 49.7  | 53.03 | 53.92 |
| 56.47 | 54.48 | 42.77 | 55.47 | 51.23 |

DIFFERENCE .... -2.69

5 MARCH (8th) 20,000 CL

~~PACE-PHASE-CLASS MEASUREMENT~~

| 1 | 2 | 3 | 1+2 = TOTAL | 3 |
|---|---|---|-------------|---|
|---|---|---|-------------|---|

CUMP

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
| 60.55 | 56.9  | 50.3  | 53.73 | 55.92 |
| 60.55 | 58.35 | 46.37 | 53.7  | 51.53 |

Diff. = - 1.33

Our suspicions are proven correct. CUMP is not a \$20,000 claimer when the conditions are written for veteran winners.

While I give some credit to Ray Taulbot in the manual, his contributions to the subject were rather obscure compared to those offered by Huey Mahl in "THE RACE IS PACE" and in his "CALCULATING RACETRACKER" articles in Systems & Methods.

The true power of PACE lies not just in a HORSE'S PACE FIGURES, but in the figures produced by the PACE IT RAN AGAINST!

This assertion is BASIC to the Sartin Methodology and applies equally to ALL phases, I through VII.

While I give some credit to Ray Taulbot in the manual, his contributions to the subject were rather obscure compared to those offered by Huey Mahl in "THE RACE IS PACE" and in his "CALCULATING RACETRACKER" articles in Systems & Methods.

The true power of PACE lies not just in a HORSE'S PACE FIGURES, but in the figures produced by the PACE IT RAN AGAINST!

Bearing this in mind let's first view the entry lines of horse A & B:

| # | NAME | DIST. | 1ST CALL | 2ND CALL | FIN. CALL | 1st B/L | 2nd B/L | Stretch B/L | Final B/L |
|---|------|-------|----------|----------|-----------|---------|---------|-------------|-----------|
| 1 | AAA  | 8.5   | 46.0     | 111.0    | 143.3     | 1.00    | 0.75    | 0.15        | 0.00      |
| 2 | BBB  | 8.5   | 46.1     | 111.1    | 143.1     | 6.00    | 3.00    | 1.00        | 1.75      |

Now we'll analyze the Race of the Race these contenders ran against:

## PACE OF RACE / PACE OF HORSE

|       |       |       |         |        |
|-------|-------|-------|---------|--------|
| POR   | 35.74 | 34.68 | 31.97 ✓ | 102.39 |
| CCC   | 35.20 | 34.15 | 32.07 † | 101.42 |
| ***** |       |       |         |        |
| RATIO | 98.48 | 98.48 | 100.30  |        |

|       |        |        |         |        |
|-------|--------|--------|---------|--------|
| POR   | 35.58  | 34.10X | 31.97   | 101.67 |
| DDD   | 35.58  | 34.10X | 31.97 ○ | 101.65 |
| ***** |        |        |         |        |
| RATIO | 100.00 | 100.00 | 100.00  |        |

- 1: Figure the Total Energy of C's Pace of Race. 102.39
- 2: Do the same for D. 101.67
- 3: Figure C's Total Energy Pace of HORSE. 2
- 4: Do the same for D.
- 5: Figure the 3rd fraction of C's POR.
- 6: Figure C's 3rd fraction against that POR.
- 7: Do the same for D.

Horses with less innate class or who are not in top form, often reveal their weakness in the second fraction. Therefore,

- 8: compile C' and D's 2nd fraction pace of Race.
- 9: Compare them against each other.
- 10: Do the same for C & D's own Pace of Horse.
- 11: Compare them against each other.
- 12: Now do all of the above using all four contenders against each other and write down your conclusions.

Alcoholics and Gamblers Anonymous have twelve step help programs. This is our 12 step program to help you comprehend the match up.

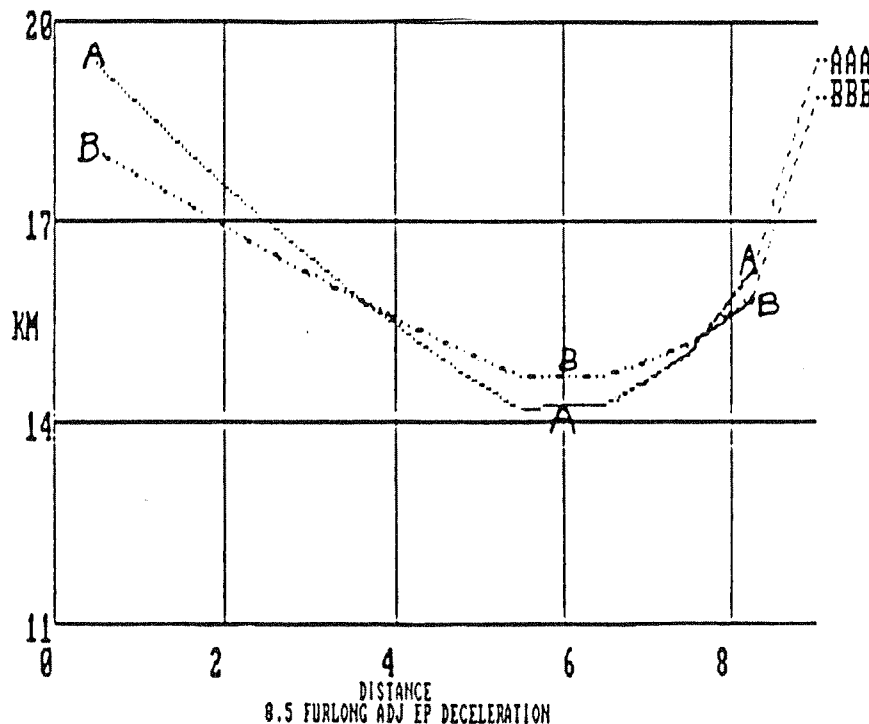

In answer to the frequent questions about the meaning of various readout numbers I can only respond by saying that in our early elementary school years we learned numerical differences through empiricism, and from playing games and through our involvement in sporting events. We perceived that in Baseball, after nine innings, a team with 4 runs was considered victorious if the opposing team only had 3 runs. Same in football. After four quarters the team with seven points always got the nod over the team with 6. In our own readouts HIGH is always best except where otherwise designated. In Velocity programs, beaten lengths at the second call and the sort numbers are based on LOW being best. In ENERGY, the LOWER UXR, HUV and EXDC deficiency numbers are nominally best. In the case of ZMED we're looking for numbers within designated parameters; so neither low nor high is best.

With our third grade arithmetic solidly behind us, lets do some more analysis of the A vs. B matchup. Go back and look at their entry screen readout.

By mainstream running time standards A finishes this race in a time of 1:43:3. B's Final time, employing the mainstream fifth of a second standard where  $3/4$  of a length equals one, is also 143:3. B's Total Energy exceeds A's by an inconsequential .35 which is equalized by the Auto Adjust. Speed (final time) Handicappers would see this race as a dead heat. Those mainstream handicappers who have adopted what they erroneously perceive as "pace," 2nd Call + Final TIME, would favor A because they are hung up on the illusion that what they call "early speed" is dominant in all circumstances.

To make more sense out of the A & B match up go back and take another look at PACE OF THE RACE against which each ran:

Now let's see how KGEN views this Match-Up.  
First on the Early Bias Graph:

We see A starting off well ahead of B. Beginning at about 4 furlongs they become about even with B drawing ahead at about the 6 furlong point. At the 8 furlong line A makes a minute upward move through the last half furlong. A's advantage in the early stages of this Match-Up are weighted more precisely by the per half-furlong numbers seen here:

## KINETIC POTENTIAL FOR 1/2 FURLONG

RAW

|     |           |       |       |       |           |       |           |       |       |
|-----|-----------|-------|-------|-------|-----------|-------|-----------|-------|-------|
| AAA | 19.65     | 18.99 | 18.38 | 17.79 | 15.36     | 13.39 | 13.07     | 12.77 | 12.50 |
| BBB | 18.21     | 17.82 | 17.45 | 17.08 | 15.53     | 14.19 | 13.97     | 13.75 | 13.55 |
|     | < _____ > |       |       |       | < _____ > |       | < _____ > |       |       |
|     | Ekp       |       |       |       | Mkp       |       | Lkp       |       |       |

## KINETIC POTENTIAL FOR 1/2 FURLONG

AUTO-Adj

|     |           |        |        |        |           |        |           |        |        |
|-----|-----------|--------|--------|--------|-----------|--------|-----------|--------|--------|
| AAA | +19.76    | +19.10 | +18.48 | +17.89 | 15.45     | 13.46  | 13.14     | 12.85  | 12.57  |
| BBB | 18.26     | 17.87  | 17.49  | 17.13  | +15.57    | +14.23 | +14.00    | +13.79 | +13.58 |
|     | < _____ > |        |        |        | < _____ > |        | < _____ > |        |        |
|     | Ekp       |        |        |        | Mkp       |        | Lkp       |        |        |

|           |   |           |
|-----------|---|-----------|
| R         |   | Abi       |
| 15.56     | A | 16.94     |
| 15.62     | B | 16.50     |
| < _____ > |   | < _____ > |
| Kexdc     |   | Kexdc     |

In the first four Auto Adjusted increments A has pluses of 1.50, 1.23, .93 and .76. A's KEXDC (Kinetic Energy/Deceleration) is +.44. A's pluses total 4.92.

Cumulative numbers, first four increments:

A = 75.23

B = 70.15

A's advantage: 4.96

B starts earning pluses in segment 5. It has Pluses of .15, .77, .86, .94 and 1.01. Total: 3.58.

Cumulative numbers, final five increments:

B = 71.17

A = 67.47

B's advantage = 3.70

Subtracting B's advantage from A's, A gets a plus of 1.26.

How will this advantage be reflected in a race. In a match race on a track with no late bias for 8.5 furlongs, A should win handily. Even on a track with a degree of sustained bias, A might win by a neck.

But this is NOT a match race between A & B.

This is where ENERGY! has the edge over pure velocity. As other horses are added to a velocity procedure, the numbers of A & B remain static. In ENERGY and Thoromation the numbers will change in accordance with the ENERGY inter-dynamic produced by the contenders themselves. Hence the Match-Up creates the profile for the race itself.

An ENGEN profile of just these two contenders shows A as a Presser/Early and B as a Presser/Sustained.

Race: testa. Dist = 8.5 FURLONGS Comments: FU

=====

ENERGY FACTORS

| Name | Total  | Hidden | Fx    | Med   | Lex   | 3rd   | ESP Type    |
|------|--------|--------|-------|-------|-------|-------|-------------|
| AAA  | 180.79 | 64.41  | 67.14 | 68.40 | 31.60 | 31.53 | E/P Presser |
| BBB  | 181.28 | 65.21  | 68.98 | 67.88 | 32.12 | 32.19 | S/P Presser |

A's %MED is 68.40% B's is 67.88. What does your profile say? How about your HIDDEN Energy Profile? A's is 64.41% B has 65.21%. Now look at the individual fractions:

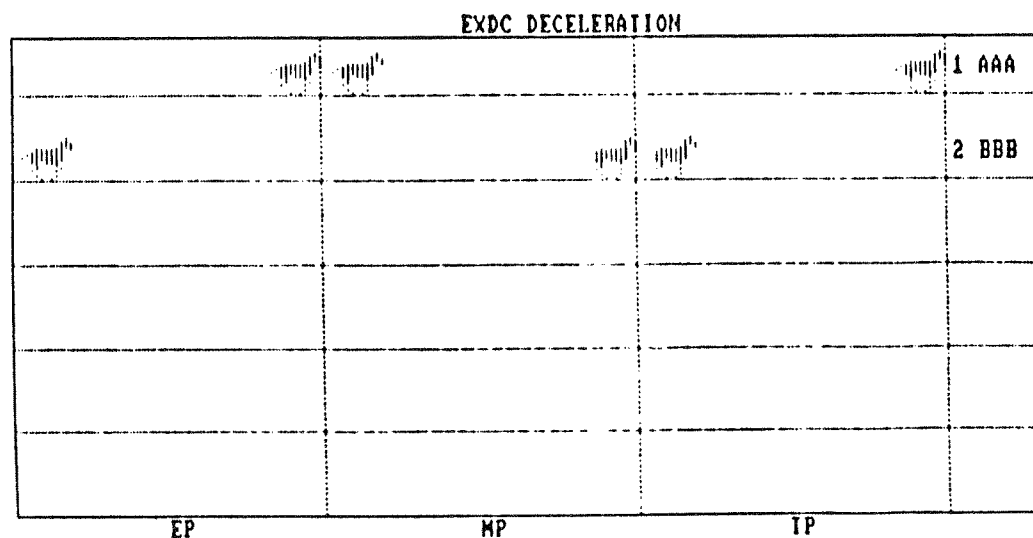

| Pace | Matchup |         |         |
|------|---------|---------|---------|
|      | F 1     | F 2     | F 3     |
| AAA  | 35.45 ✓ | 32.73   | 31.43   |
| BBB  | 34.72   | 32.98 ✓ | 32.11 ✓ |

A owns Dream Race F-1. B owns F-2 and F-3. (A Velocity readout would give F-2 to A.) A's F-1 advantage is .73. B's 2nd fraction Energy advantage is .25, but A is still ahead. B's 3rd fraction advantage is .68. B's Total advantage in Hidden Fraction Energy is 98-73 or +.25. The question here is THAT enough to overcome a .73 first fraction deficit?

If the date were August 14, 1991 at Del Mar The answer would be, YES. B would win. If the date were in June at Hollywood Park, January at Santa Anita or Aqueduct or Golden Gate, the answer would still be NO, A should win.

Indeed, even on THOROMATION'S EXDC (Energy Exertion/Deceleration) graph, which views the race from a perspective of an EARLY or NO bias, when an EARLY or NO bias, A wins the matchup.

Indeed, even on THOROMATION'S EXDC (Energy Exertion/Deceleration) graph, which views the race from a perspective of an EARLY or NO bias, A appears to win the two horse matchup.

## NEURO-SYNAPTIC RESPONSE SYSTEM

Again I must stress that this is NOT a 2 horses match race. In a moment we will see that by adding the ENERGY DYNAMIC of Contenders C & D, the picture will change. That change will be affected by what we call a Neuro-Synaptic Response System which functions on the principle of Neuro Networking. When the Match Up of this race is altered by the addition of a NEW ENERGY DYNAMIC: contenders C and D, the ENERGY FIELD is substantially altered. This is where the Sartin Methodology TODAY differs drastically from contemporary handicapping thought. Mainstream philosophy views pace from STATIC numbers. They handicap HORSES as entities. WE see numbers as reflections of TODAY'S Match-Up.

WE handicap RACES and the COLLECTIVE inter-dynamic of the horses in relationship to each other in an ENERGY FIELD!

There are those, like Jim "The Hat" Bradshaw, who can sense this inter-dynamic through observation of the Racing Form with NO track profile to assist them. This kind of perception is very rare. For the vast majority of handicappers a TRACK PROFILE is essential.

Those who refuse to keep any kind of a win profile for their track and then complain that they "Don't Understand" their programs, are not USING the Methodology, they're ABUSING it. And I'm not talking about a comprehensive, complex profile. All you need to know is - by class level, (high, medium and low), and by distance and surface: HOW much EARLY advantage do horses atop the EP graph NEED at YOUR TRACK(s) to justify using your Early KGEN graph. And, how much surplus HIDDEN ENERGY over Early is required for horses atop the SP graph to win?

Am I saying that you should do as I did and add up all those little numbers on the KGEN per half Furlong graph?

NO, NO, a thousand NO's. Merely peruse the numbers. Look for and remember patterns. Pattern Recognition is the key to successful handicapping. Energy users have many other readout sources to guide them. Look at this:

| Name | Various<br>Modules of Exdc |         |         | Muv<br>=== |
|------|----------------------------|---------|---------|------------|
|      | Emuv                       | Smuv    | UXr     |            |
| AAA  | 0.000                      | 0.220 ✓ | 0.220   | 0.00       |
| BBB  | 0.059 ✓                    | 0.059 ✓ | 0.118 ✓ | 1.66       |

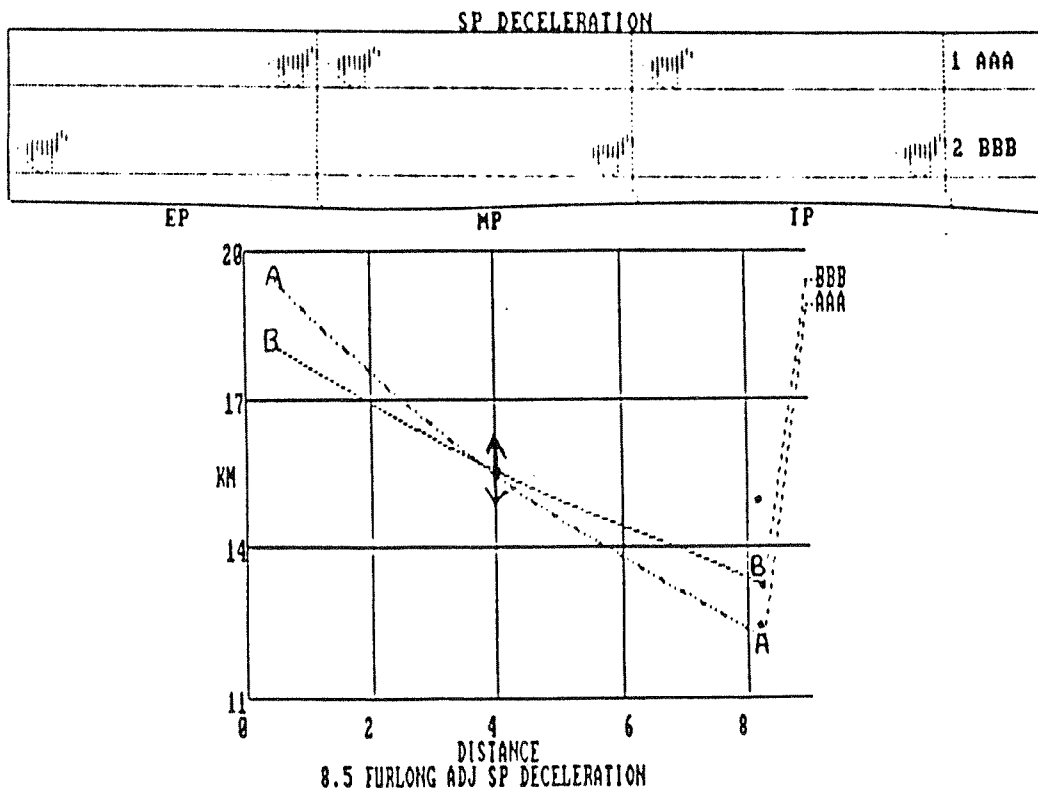

A has a 0.00 Emuv deficiency from the Dream Race. B's Emuv deficiency is .059. A's Smuv deficiency is .22. B's stays a consistent .059. Except in the case of a VALID EARLY ENERGY Bias, as distinguished from horses merely winning on the lead. B has a slight advantage in this matchup, as indicated by its LOWER UXr. The key to its possibility of NOT winning against a marked Early Bias lies in the MUV rating.

MUV  
 ===  
 A: = 0.00  
 B: = 1.62

When YOUR PROFILE shows that a deficiency of 1.62 is too great, B is not likely to win. This kind of extreme bias will be RARE at many North American tracks. But where it exists, recognizing it is simple IF you keep a Brohamer Model. Energy users should always model their WINNER'S MUV and UXR.

Finally, we have the Variegate problem. Or, in truth, a perceived Variegate problem. The A Vs. B Matchup would Variegate Early. You may say that A is the Early Horse and B is not. But look again at EMUV, SMUV and UXR. Now look at the rankings.

|     |           |     |     |     |     |     |
|-----|-----------|-----|-----|-----|-----|-----|
|     | E X D C   |     |     |     |     |     |
|     | * * * * * |     |     |     |     |     |
|     | E P       | P R | H E | S P | L X | F X |
|     | ===       | === | === | === | === | === |
| AAA | 1         | 2   | 2   | 2   | 2   | 1   |
| BBB | 2         | 1   | 1   | 1   | 1   | 2   |

WHERE might B take over in the race? Answer: BEFORE the second call. B is #1 Presser, Hidden and Sustained. Too many clients are confusing Sustained with LATE. Always bear in mind that the Sustained formula is TWO PARTS Early to one part late.

At this point, matching up only TWO animals against each other, we may find ourselves still in a quandary and perceive a possible dead heat. So, I will further explain what I mean by the INTER-DYNAMIC of Energy Forces that take place within a race with multiple contenders. We add two new forces to our Energy Field. They are C and D. Here are their Pace Lines, along with those of A and B:

| # | NAME | DIST. | 1ST CALL | 2ND CALL | FIN. CALL | 1st B/L | 2nd B/L | Stretch B/L | Final B/L |
|---|------|-------|----------|----------|-----------|---------|---------|-------------|-----------|
| 1 | AAA  | 8.5   | 46.0     | 111.0    | 143.3     | 1.00    | 0.75    | 0.15        | 0.00      |
| 2 | BBB  | 8.5   | 46.1     | 111.1    | 143.1     | 6.00    | 3.00    | 1.00        | 1.75      |
| 3 | CCC  | 8.5   | 45.4     | 110.4    | 142.4     | 5.00    | 5.00    | 4.00        | 4.00      |
| 4 | DDD  | 8.5   | 46.0     | 112.0    | 144.0     | 0.00    | 0.00    | 0.00        | 0.00      |

Now please observe the subtle changes undergone by A & B's numbers in the KINETIC POTENTIAL readout. Compare these NEW numbers to the ones on the readout where ONLY A & B were being matched against each other.

#### KINETIC POTENTIAL AND DECELERATION

|     |     |         |       |       |         |       |       |       |         |       |
|-----|-----|---------|-------|-------|---------|-------|-------|-------|---------|-------|
| AAA | 8.5 | 19.41   | 18.17 | 17.05 | 16.04   | 15.14 | 14.33 | 13.62 | 12.98   | 12.42 |
| BBB | 8.5 | 18.05   | 17.32 | 16.64 | 16.00   | 15.39 | 14.82 | 14.29 | 13.79   | 13.32 |
| CCC | 8.5 | 18.95   | 17.64 | 16.55 | 15.66   | 14.96 | 14.42 | 14.04 | 13.81   | 13.73 |
| DDD | 8.5 | 20.56   | 17.67 | 15.61 | 14.23   | 13.42 | 13.12 | 13.32 | 14.02   | 15.28 |
|     |     | <-----> |       |       | <-----> |       |       |       | <-----> |       |
|     |     | Ep      |       |       | Hp      |       |       |       | Lp      |       |

This is what I mean when I say that Energy is a DYNAMIC measure of a race whereas Velocity is STATIC. To demonstrate, here are the Velocity (Phase III) Fractional readouts from the same running lines. First a look at the A & B Matchup;

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
|       | F 1   | F 2   | F 3   | S C   |
| Pace  | 57.17 | 52.90 | 51.95 | 55.66 |
| ===== |       |       |       |       |
| AAA   | 57.17 | 52.90 | 50.84 | 55.66 |
| BBB   | 57.07 | 51.92 | 51.95 | 55.19 |

Now we add C & D:

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
|       | F 1   | F 2   | F 3   | S C   |
| Pace  | 57.39 | 52.90 | 51.95 | 55.66 |
| ===== |       |       |       |       |
| DDD   | 57.39 | 50.76 | 51.56 | 54.99 |
| AAA   | 57.17 | 52.90 | 50.84 | 55.66 |
| BBB   | 57.07 | 51.92 | 51.95 | 55.19 |
| CCC   | 56.55 | 52.79 | 51.87 | 55.22 |

Note that A & B's Velocity fractional readouts DO NOT change. In ALL programs reflecting TODAY'S METHODOLOGY - Energy!/KGEN, Thoromation, of course, they do.

In a velocity program they would not change no matter HOW MANY horses were added to the Match-Up.

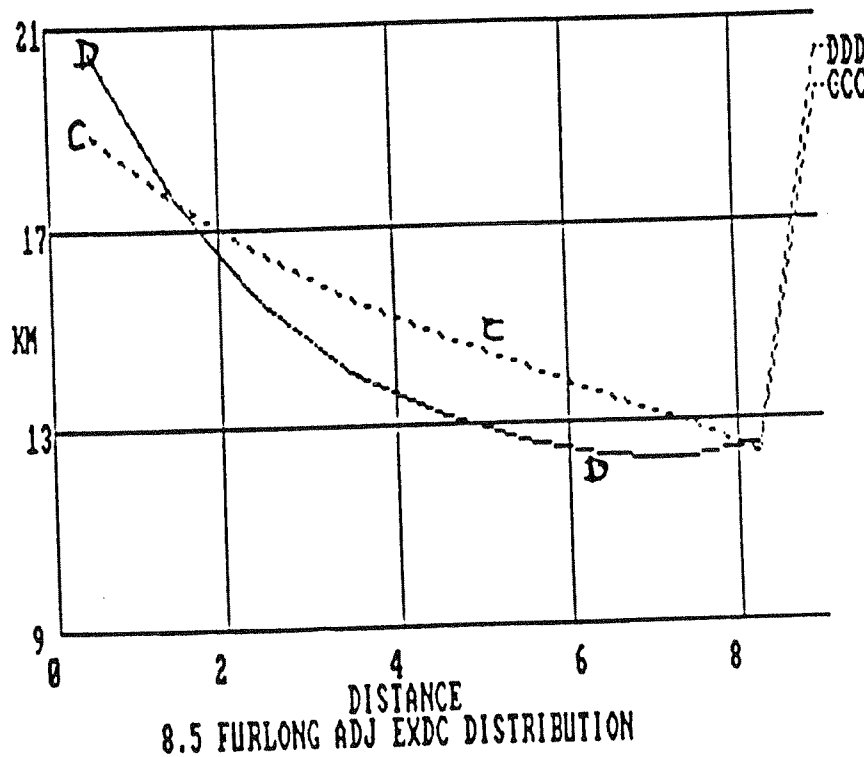

| Pace | Matchup |       |       |
|------|---------|-------|-------|
|      | F 1     | F 2   | F 3   |
|      | 35.65   | 33.00 | 32.06 |
| DDD  | 35.65   | 31.54 | 32.03 |
| AAA  | 35.46   | 32.75 | 31.44 |
| CCC  | 35.15   | 32.69 | 32.02 |
| BBB  | 34.75   | 33.00 | 32.06 |

This is another illustration of the fact that Velocity is STATIC. It measures each contender's rate of velocity as a distinct entity, NOT as a dynamic force in the energy field that constitutes TODAY's Match-Up.

Velocity measures a race only by three fractions. ENERGY/KGEN by each half-furlong. In Velocity's static view A's 2nd Fraction is faster than B's. ENERGY/KGEN detects a substantial move by B that began the 3rd half-furlong point in the race and shows it overtaking A in the fifth one half-furlong.

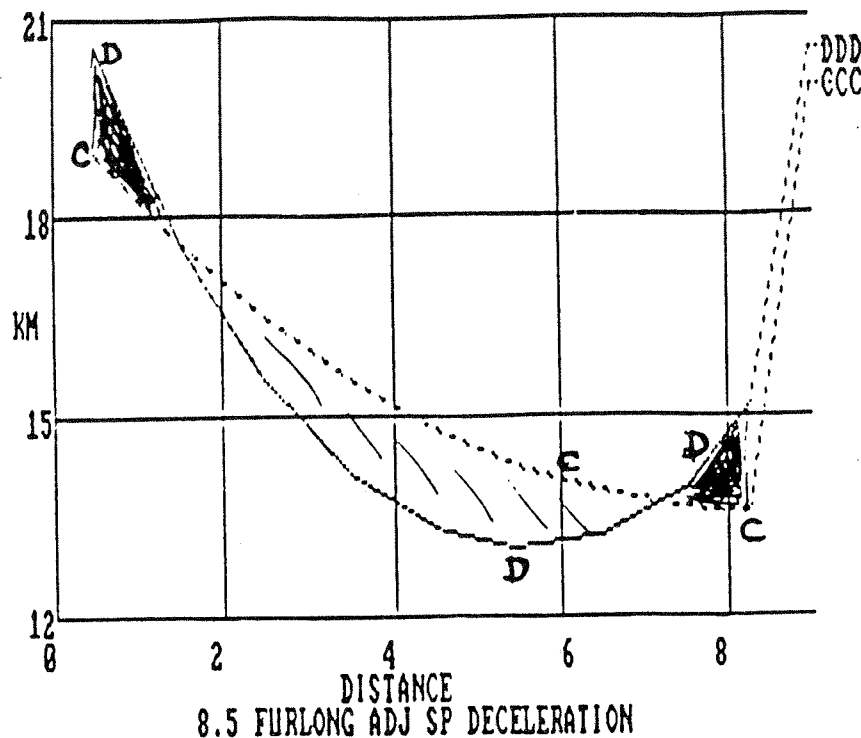

Now lets match up C vs. D on KGEN:

|     |     |        |       |       |        |       |       |       |        |       |
|-----|-----|--------|-------|-------|--------|-------|-------|-------|--------|-------|
| CCC | 8.5 | 18.95  | 17.64 | 16.55 | 15.66  | 14.96 | 14.42 | 14.04 | 13.81  | 13.73 |
| DDD | 8.5 | 20.56  | 17.67 | 15.61 | 14.23  | 13.42 | 13.12 | 13.32 | 14.02  | 15.28 |
|     |     | < Ep > |       |       | < Hp > |       |       |       | < Lp > |       |

While D is ranked above C on the right hand margin, we must ask ourselves if that early margin is enough to compensate for D's big DIP in the middle of the race. D makes a slight comeback at the end but the area of D's dip is considerably larger than the area of its early lead. Next, the SP graph:

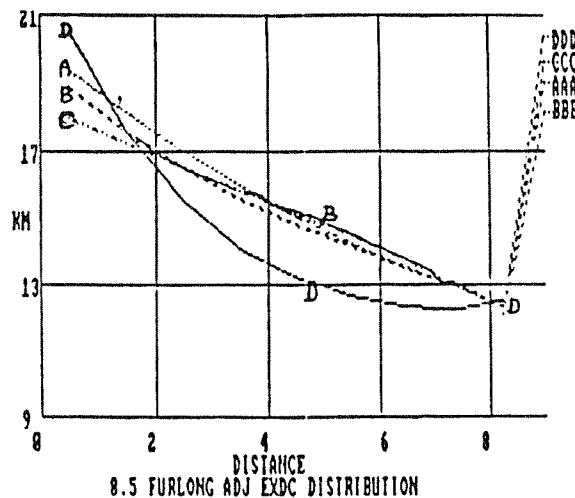

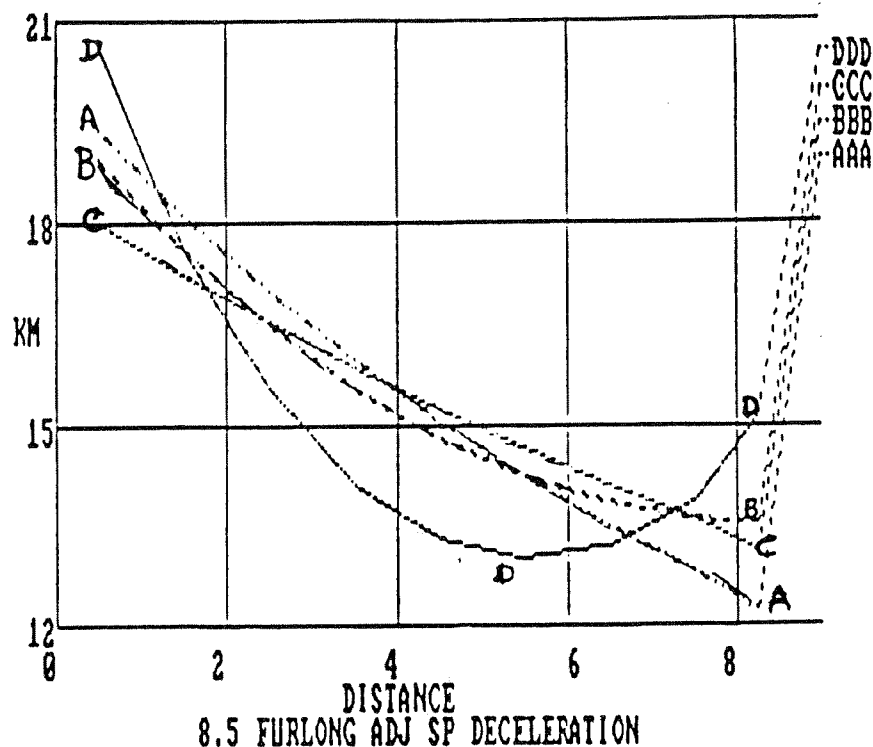

On this graph I have gray shaded the areas of D's superiority. I've indicated the area where C prevails with // //. Which area is the greatest? Despite the order on the right hand margin, I perceive C as superior.

One of the principle thrusts of the Match-Up Manual, Pirco's all time best seller, was aimed at bringing home the fact that when a horse on the lead WHO NEEDS TO LEAD, is challenged it will instinctively try to accelerate in order to stave off that challenge. In so doing, the "Hat: patiently explains, it will use up much of its potential 3rd fraction energy and WILL NOT run to its projected Late Pace. Hence, D's late upswing is an illusion based on a pace line taken from an unchallenged wire-to-wire victory last race. It will NOT run this well late today. SO, DISCOUNT ALL of D'S late readouts.

Next a look at ALL FOUR contenders running against each other on the KGEN graphs:

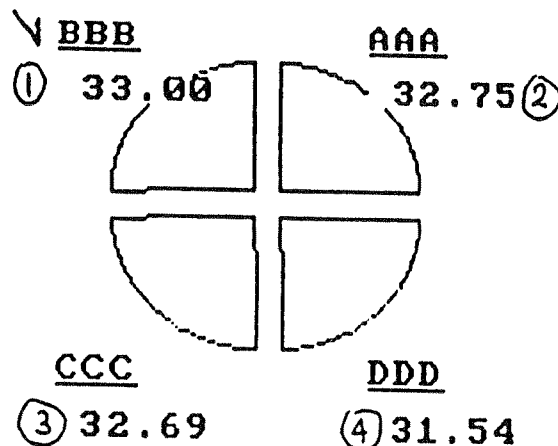

While ranked last on EXDC in the right hand margin, B shows a subtle mid-race upswing. Now, since this race figures to run Sustained, a look at KGEN'S SP graph:

In the margin D is ranked on top. But we now know that this is an illusion. D's significant middle dip should be enough to convince even the least astute of this fact. Were this a SPRINT a different analysis would be in order. But this is an 8.5 furlong ROUTE and it behooves every client to recognize racing patterns by distance. An astute handicapper would have eliminated D from the beginning. However, this discourse is not designed to educate the astute.

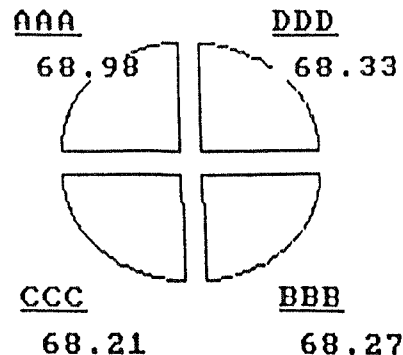

Our sustained Match-Up is now between B & C. For a final analysis and eventual wagering decision we must consult our other readouts. First, lets look at Turn Time:

### TURN TIME

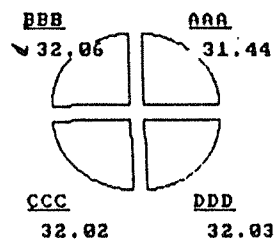

We see D with a severe loss of energy on the turn. It has already succumbed to pressure and lost its lead. B shows a BIG move and is now pressing A for the lead. We move to the Second Call:

### SECOND CALL

Bearing in mind that Sustained Pace is two parts EARLY, we see A with an edge over D. But we know that D is decelerating rapidly. B holds only a slight margin over C but has its big Turn Time Momentum going for it. Now for the Final Fraction:

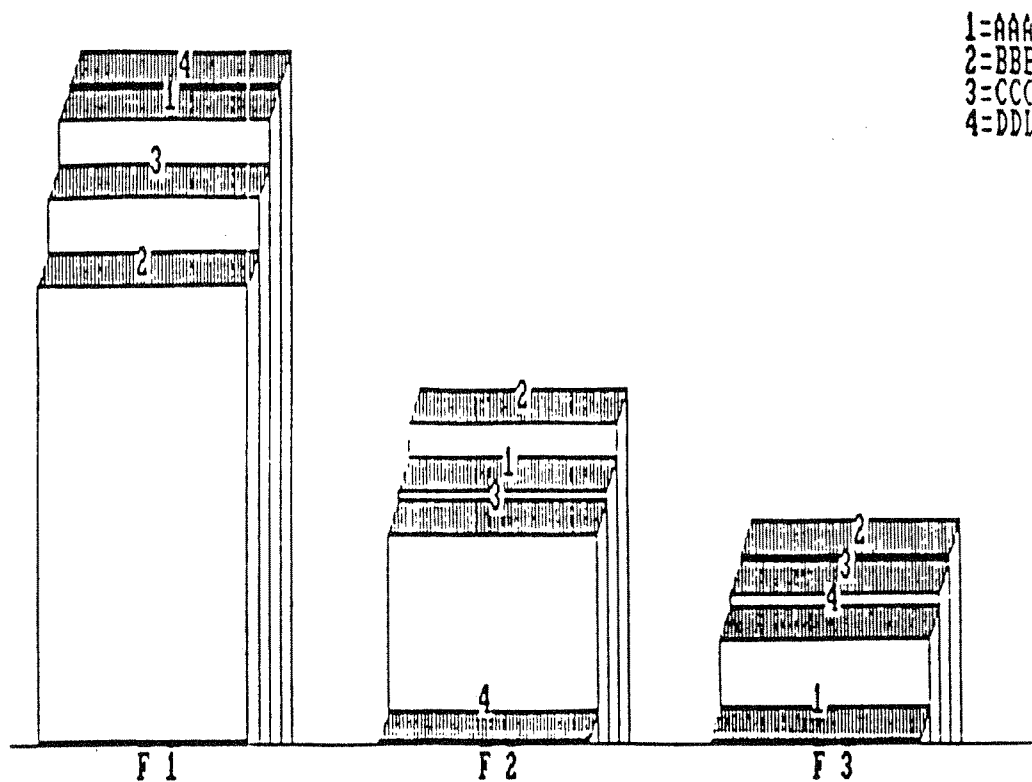

### Final Fraction

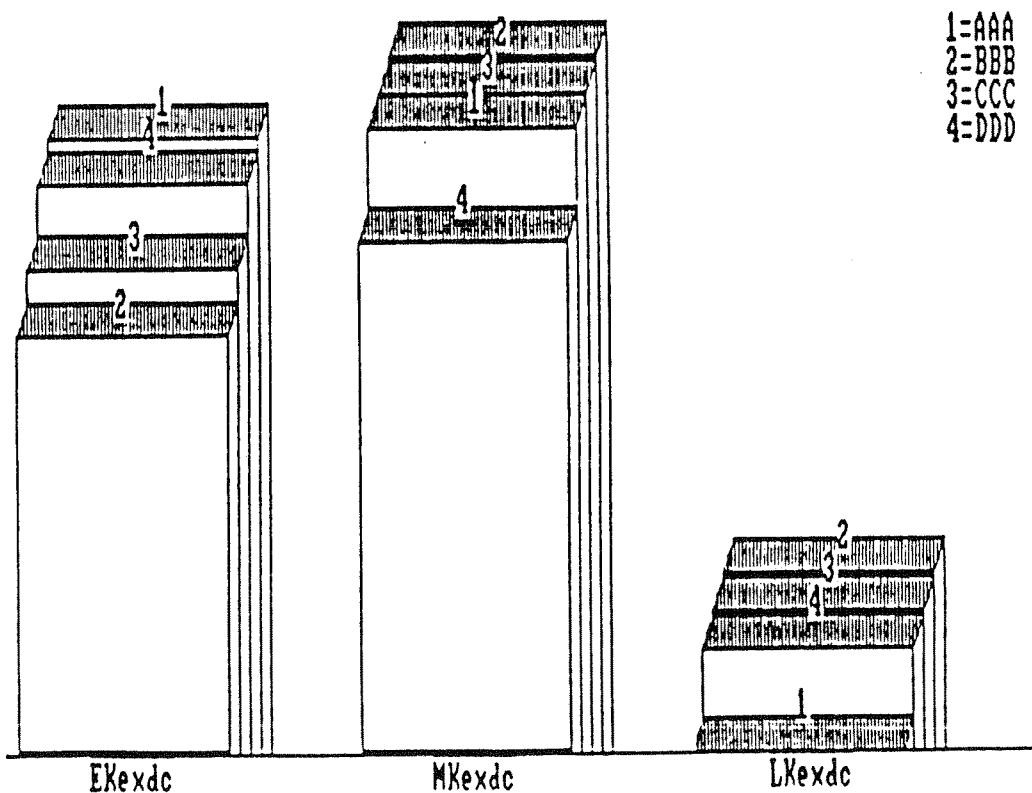

B's Turn Time Momentum is sustained in the third fraction. THIS IS a MOST IMPORTANT factor. A SINGLE increment move, no matter WHERE it takes place, is NOT as significant as the perpetuation of a move into the next increment. B does NOT disappoint. It is number ONE in the third fraction. We have already discounted D so C becomes the next most likely win candidate. A's 3rd Fraction deficiency is marked, considering that this is a route. Were it a SPRINT A's Second Call lead would be enough to make it the prime win suspect. Recognizing the DIFFERENT emphasis placed on any and all readouts by distance, especially between sprints and routes is YOUR job. Pattern Recognition comes from continued practice AND remembering what you learn from that practice. Under any condition, B's Turn Time Move, sustained through the 3rd Fraction, is a significant factor.

Now let's look at the graphs I seldom see when clients send me problem races. First the Fractional Bar Graphs:

We see D starting off with a slight lead then taking a considerable dip in F-2. It makes slight recovery in F-3. But it will not run to its PP projected 3rd fraction today. B's surge from last in F-1 to first in F-2 & F-3 make it a standout. The EXDC bar graphs tell pretty much the same story. The difference is that A, with less Deceleration than D, is atop the F-1 graph and C with its lesser Early Deceleration ranks 2nd on both the MKEXDC and LKEXDC

Next the readout I deplore the most; but the one clients usually use to make their final decisions. I hope one look here will alter your FUTURE use of Energy! Look!

# ENERGY

## Sustained

|     | E P | P R | H E | S P | L X | F X | Muv  |

|     |       |
|-----|-------|
| AAA | ----- |
|-----|-------|

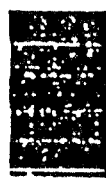

## VARIEGATE

|           |       |
|-----------|-------|
| Sustained | ----- |
|-----------|-------|

## Late Exdc

BBB

DDD

CCC

## Late Match Up Exdc

| Name | 1st  | 2nd  | 3rd          |
|------|------|------|--------------|
| DDD  | 0.00 | 0.95 | 0.09         |
| AAA  | 0.52 | 0.00 | 1.92         |
| CCC  | 1.40 | 1.11 | 0.11         |
| BBB  | 2.53 | 1.04 | <u>0.00X</u> |

While D should have been eliminated from contention long ago, with a Sustained Variegate D is number one Sustained! Too many clients are looking at those TWO FACTORS ONLY and would bet D. True B is the next best Sustained and would also be a wager; and B is the number One Paragon B horse. However, D shows up as 1st on EP and is number one Paragon A. Thus most people would include it in an Exacta.

Most Clients FAIL to look at HIDDEN ENERGY. This is the average of the TWO hidden fractions, 2nd and 3rd. They are at least as good a measure of Sustained Energy as the Sustained Pace rating itself. LOOK, D is LAST! Last on both Hidden and Presser. Were this a SPRINT we might place a different interpretation on these readouts. The problem with the SORT is that it is necessarily STATIC and is designed to measure relationships at ALL distances with equal emphasis. The SORT is the LEAST potent readout in Energy!/KGEN.

For a final analysis of this Match Up, let's go to THOROMATION:

# Thoromation™

WITH INSTANT PRE-PLAY

|                                                                                     |       |
|-------------------------------------------------------------------------------------|-------|
|  | 1 AAA |
|  | 2 BBB |
|  | 3 CCC |
|  | 4 DDD |

Our interpretation problems are over. B wins, C places. That's the way the race was run. A showed. Here is the race in Stop Action Instant PREplay:

## SP DECELERATION

|                                                                                     |                                                                                       |                                                                                       |       |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|-------|
|    |      |      | 1 AAA |
|  |    |  | 2 BBB |
|  |    |  | 3 CCC |
|  |  |  | 4 DDD |

So a Match-Up that originally favored A over B ends up reducing A to a distant 3rd when the Energy Dynamic of the other contenders is considered. This is our big edge over mainstream practitioners. THEY figure horses, WE figure races. They will insist, even after they lose the race, that A is a better horse than B. In a different Match-Up, perhaps. But with TODAY'S REAL Match-Up, NO!

Did Phase III get this race. I would say yes, but with less clarity.

## RANKINGS

=====

|     | F W | E P | S P | T T | F X | W X | L P | D R | MED E | Line Score | Rank |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-------|------------|------|
|     | === | === | === | === | === | === | === | === | ===== |            |      |
| AAA | 1   | 1   | 2   | 2   | 3   | 3   | 3   | 1   | 68.40 | 2.0        | 2    |
| CCC | 2   | 2   | 1   | 1   | 2   | 2   | 2   | 4   | 67.82 | 2.25       | 3    |
| BBB | 2   | 2   | 1   | 3   | 1   | 1   | 1   | 3   | 67.72 | 1.75       | 1    |
| DDD | 3   | 3   | 2   | 4   | 1   | 2   | 2   | 2   | 67.72 | 2.35       | 4    |

How Did Phase I treat this race?

This was the kind of race where Phase I excels IF THE USER KEEPS A RUNNING TRACK PROFILE. Phase I does not utilize 1st or second fraction (Turn Time), so in certain kinds of races it does not detect hidden moves. When 2nd Calls and Final fractions are true determinants, Phase One does an admirable job, especially in contender selection. Look how well it got rid of D. The TPR ratings are quite accurate IF one knows that the correct variegation of a race. In this case, SUSTAINED. The margins between A, B & C are small, but happily the TPR numbers rank B #1. So does the FFR.

RACE:                      PHASE I REPORT                      DIST: 8.5

#### EARLY PACE RANKING

| NAME  | EPR   |   | FFR   |   | T P R |   |
|-------|-------|---|-------|---|-------|---|
| ----- | ----- |   | ----- |   | ----- |   |
| AAA   | 84.2  | 1 | 81.4  | 4 | 165.6 | 2 |
| CCC   | 80.9  | 2 | 84.6  | 2 | 165.5 | 3 |
| BBB   | 80.9  | 2 | 84.8  | 1 | 165.7 | 1 |
| DDD   | 79.9  | 4 | 83.6  | 3 | 163.5 | 4 |

#### TOTAL PACE RANKING

| NAME  | EPR   |   | FFR   |   | T P R |   |
|-------|-------|---|-------|---|-------|---|
| ----- | ----- |   | ----- |   | ----- |   |
| BBB   | 80.9  | 2 | 84.8  | 1 | 165.7 | 1 |
| AAA   | 84.2  | 1 | 81.4  | 4 | 165.6 | 2 |
| CCC   | 80.9  | 2 | 84.6  | 2 | 165.5 | 3 |
| DDD   | 79.9  | 4 | 83.6  | 3 | 163.5 | 4 |

Here the Place horse, CCC did not fare so well. But frequently the TOP TPR ranked contender will place more often than it will win, making Phase I a remarkable program for detecting place horses for Exacta wagers. This matchup turned out to be almost a perfect textbook example of Phase I's simple effectiveness.

| AAA | 1          | 1          | 2          | 2          | 1          | 1          | 3          | 1          | 68.45          | 1.50       | 1    |
| BBB | 2          | 2          | 1          | 1          | 3          | 2          | 1          | 2          | 67.92          | 1.75       | 2    |
| CCC | 3          | 3          | 3          | 3          | 2          | 3          | 2          | 3          | 67.86          | 2.75       | 3    |

Pros would also eschew the Line Scores as a means of interpretation. They would have a profile showing that TT and SP were the most important readouts in this match-up and favor B. Pros also only bet one horse and feel that place betting is for wimps, so the lower rankings of C, the place horse, would not bother them.

You may be asking WHY I used the designation A,B,C & D instead of using the Past Performance charts of the actual race. The reason is primarily psychological. All too often, when looking at actual pace lines, clients tend to see peripheral factors that have no bearing on optimal race analysis.

I have displayed the four true contenders in this race as commodities competing for your investment dollars. With their names, jockeys, trainers, man-made class levels, post positions and other ancillary information withheld, you can view this race from a perspective that is not clouded by the many subconscious factors that are subject to emotion and mythical fancy.

This was a very  
simple match-up.  
All the tools in our  
arsenal will point to  
the Winner with no  
problem. Even eye-ball  
scan should get it.

**HOWEVER,**  
the **PROCEDURES**

outlined, if properly implemented, will  
find you winners in  
the more complex  
kinds of races  
where the match-up  
is **NOT** so obvious.  
Review the procedure.  
Practice it until it  
becomes second nature  
to you.

1. Find the energizer,  
the O Muv horse.

2. Determine who the  
**OTHER** contenders  
are who also want  
the lead.

3. Now see which  
can hold it longest.

4. Who has the best  
2nd Fraction?

5. Who has the best  
3rd fraction?

6. Can one of these  
horses overtake the  
O Muv horse?  
That's the Matchup

## A NEW PARADIGM FOR EARLY SPEED

---

### The Old Paradigm

One of the most insidious of all mainstream, Old Paradigm myths is the one involving what is euphemistically called, Early Speed. A 1979 statistical study by Dr. William Quirin of Adelphi University indicating that horses on or near the lead in a race dominate the winners circle produced a monumental flood of erroneous handicapping literature. While it is true that at many tracks a majority of winners come from the ranks of horses inclined to be among the early leaders on both Results and Past Performance charts, it is equally true that in any given race SEVERAL entrants meet this qualification. While ONE of them may enter the winner's circle much of the time, POSITION CALL analysis does little to predict WHICH one.

Quirin, himself, is not the culprit. False conclusions derived from his study ARE. They represent a classic example of Premature Cognitive Commitment. First let's look at the actual results of Quirin's study:

Quoting From WINNING AT THE RACES (Wm. Morrow, 1979)  
Chapter I, "The Significance of Early Speed."

"Most significantly the % Win column points out that the early leaders - The FCP (First Call Position) 1, 2 or 3 group, accounts for 57 percent of the victories."

Quirin states that FCP, position at the FIRST call means the quarter mile call in sprints and the half mile call in routes. In his 1983 work, HANDICAPPING STATE OF THE ART, Quirin capsulates his 1979 statistics with this statement: (page 71)

"Early speed is very closely tied to winning. Five of nine races on a typical card were won by horses who were among the FIRST THREE at the First Call."

From this innocuous statistic, contemporary experts and system sellers alike, have produced a bevy of early speed methods that thoroughly distort the true value of Quirin's statistic. There are a number of tracks in North America where, at most distances, this statistic is completely invalid. There are many days in the racing year where, even at tracks where early pace dominates, when the complete reverse of Quirin's data is true.

After-the-fact, RESULT CHARTS statistics DO reflect the accuracy of Quirin's research much of the time. In fact, at a many tracks horses that are 1st, 2nd or 3rd at the first call, win more than 57% of the time. But detecting the actual winner by looking only at Past Performance position calls is quite another matter, as we shall soon see.

Here is a 1992 Race at Santa Anita, traditionally an Early Bias track. There are seven contenders in this 6.5 furlong event. FIVE of them eminently qualify as EARLY by the Quirin standard.

Quirin also said that horse's who project to be 1-2 or 3 at the first call tend to be heavily OVER BET. Not so in the above example. But if that was generally true in 1979, think how much more true it must be today within so many systems dedicated to the misinterpretation of Quirin's findings. If these 1-2-3 horses are OVER BET it stands to reason that the rest of the field is UNDER BET. So profitable wagers could be made by betting the 43% odds on winners who are NOT 1, 2 or 3!

In his 1986 revision of AINSLIE'S COMPLETE GUIDE TO THOROUGHBRED HANDICAPPING, Tom Ainslie restates Quirin's findings which, he said, were an outgrowth of a previous study by Frederick Davis wherein 62% of all winners came from the ranks of the early runners at "the half mile." (he did not delineate between sprints and routes).

In Quirin's third book, HANDICAPPING BY EXAMPLE, (Wm. Morrow, 1985) little mention was made of "early speed" or the importance of first call position. Instead, he wrote:

"At Handicapping Expo '84 (1984) Howard Sartin spoke of Incremental Velocity and Energy Distribution. He described how individual horses tend to distribute their energy between the pace (second call by Quirin's definition) and stretch portions of a race consistently from race to race. And how the racing surface itself, on any given day, places certain demands on energy distribution that a horse must meet, or face an uphill climb to the winner's circle. I find them (Sartin's concepts) most fascinating and would recommend that the interested reader take a closer look."

We learn from this statement that by 1985 Quirin had reconsidered his emphasis on the importance of early speed as seen from the perspective of early POSITION CALLS, and had begun to accept the importance of ENERGY distribution.

Can ANYONE clearly predict, by looking ONLY at the charts of CANDYMAN, C.T. EXPRESS, SNIPLEDO, SAFE TO SAY or DOMINATED DEBUT which will emerge victorious? I'll give you a hint it is not CURE or HOUSE. One of the designated early horses DID win.

Was it CANDY, who ran the best average first fraction over its past three races? Was it DOMINATED, who has the highest speed rating? Was it SAFE, who finished closest to the winner last out? Was it SNIP who went wire-to-wire at today's distance two races back? Or, was it C.T. EXPRESS who ran the fastest first fraction last out but finished so badly, 14.25 lengths behind?

I'm sure that most handicappers who subscribe to mainstream standards of CLASS will discount SNIP who comes from Longacres and C.T. EX. from Exhibition Park in Vancouver, Canada. Fast horses from these tracks DO win at Santa Anita, but "conventional" wisdom says play against them. My own position on the matter is: If they don't belong, accurate ENERGY analysis will eliminate them.

In this race NO speed or velocity pace handicapping procedure will point decidedly to the winner in its top two ratings. So, let's run the race through one of our advanced computer programs and see if one or more of its readouts will point to the winner.

2

**6 1/2 FURLONGS.** (14) CLAIMING. Purse \$35,000 4-year-olds and upward. Weights, 4-year-olds, 120 lbs.; older, 121 lbs. Non-winners of two races since November 15 allowed 2 lbs.; of a race since January 1, 4 lbs.; since November 15, 6 lbs. Claiming price \$62,500, for each \$2,500 to \$55,000 allowed 1 lb. (Maiden or races when entered for \$50,000 or less not considered.)

**LASIX—Cure Thyself, Candyman Bee, C. T. Express, Snipledo, Safe to Say, Dominated Debut.**

As the horses approach the stretch, CANDY-2 and SNIP-2 trail the field. C.T. EXPRESS is well in the lead.

The TURN TIME pie chart reveals weakness in SNIP, DOMI and CANDY-2.

On this Graph, C.T. EX dominates the Early Fractions.

| # | NAME  | DIST. | 1ST<br>CALL | 2ND<br>CALL | FIN.<br>CALL | 1st<br>B/L | 2nd<br>B/L | Stretch<br>B/L | Final<br>B/L |

We scratch the trailers. Leaving CANDY, SAF-2, C.T, SNIP and DOMI as the contenders on our final Entry Screen.

## NOTE:

In our ADVANCED PROCEDURES we NEVER enter more tha 9 beaten lengths at ANY call.  
This procedure has upped CONSIDERABLY our win proficiency, especially our LONG SHOT Win proficiency.

Energy running styles show that SNIP-2 and DOMI are not truly early. Already we know that DOMI is the least likely to win. So before decision time, scratch DOMI.

On the KGEN Early Pace graph, C.T. with the early bulge, ranks right in the middle among the true contenders.

The per furlong Kinetic Potential shows C.T. with a commanding lead through 3 furlongs. Only Snip 2 moves on CT at the 4 furlong point. Horses with a commanding lead THROUGH the 2nd fraction cause the other contenders to NOT run to their projected final fraction.

## KINETIC POTENTIAL FOR EACH FURLONG

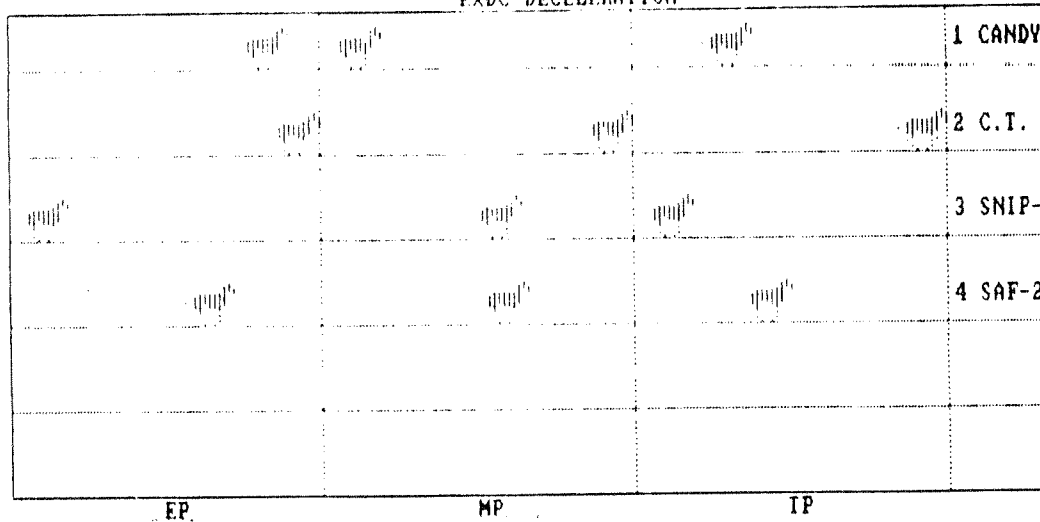

|        | <u>1</u>  | <u>2</u> | <u>3</u> | <u>4</u> |

## EXDC DECELERATION

On the EXDC Stop Action Instant PREplay graph Candy dominates the first segment of the race. CANDY, the ultimate place horses is 2nd. C.T. Dominates MP (median Pace). Energy PLUS Deceleration factors predict C.T. Ex as the ultimate winner in this match-up.

## Early Exdc

C.T.  
SAF-2  
CANDY

| Exdc Deceleration Ratio |                      |                     |                      |
|-------------------------|----------------------|---------------------|----------------------|
| Name                    | 1st                  | 2nd                 | 3rd                  |
| C.T.                    | 100.00 <sup>x</sup>  | 100.00 <sup>x</sup> | 94.78                |
| CANDY                   | 99.57 <sup>(2)</sup> | 97.81               | 97.68 <sup>(2)</sup> |
| SAF-2                   | 98.77                | 99.08               | 97.21                |
| SNIP-                   | 96.41                | 99.02               | 100.00               |

Note C.T.'s 100 (zero deficiency) ratings in both 1st and 2nd segments. The place horse is second in #1 and in #3. Notice also that SNIP, the Longacres horse that probably would be eliminated by mythical mainstream concepts, eliminated ITSELF with no man imposed adjustment.

**9362**—SECOND RACE. 8 1/4 Furlongs. Purse \$35,000. 4-year-olds and up. Claiming price \$62,500-\$5,000.

## KGEN'S MOVING GRAPHS

---

If they have included it in their computations, most clients have the winner somewhere in their readouts. All of our computer programs tend more often than not to elevate the winner into the top three on one or more readouts. The key to profitable wagering success, therefore, is readout interpretation.

One of the major problems expressed by many clients is CONFUSION over which readout – or which adjustment – to believe. Often this confusion arises because they fail to PRACTICE looking at the various screens, detecting PATTERNS and filing them away into their subconscious.

PATTERN RECOGNITION is the key to successful handicapping.

Pattern Recognition is a learned skill. Like playing a musical instrument or identifying planets and constellations on a starry night or just knowing how to find one's way home from work. It's all pattern recognition. And it comes from DOING. From practice.

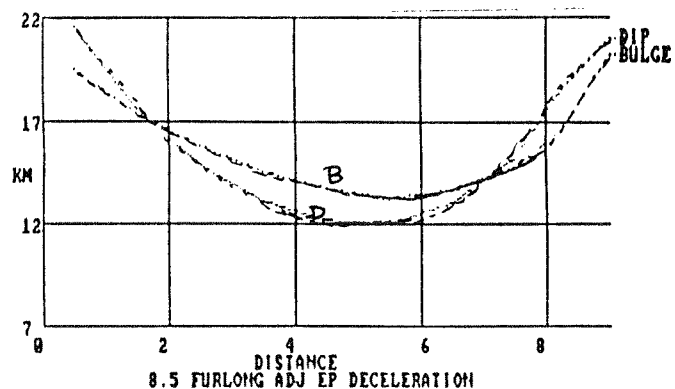

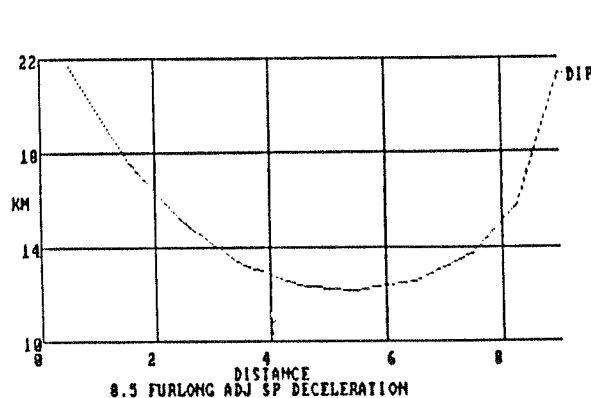

In 1989, we began adding graphics to our programs because most people are more picture than number oriented. This goes back to our childhood when picture books were one of our main delights. Movies and Television have served to fortify our picture orientation.

KGEN draws a moving picture of a race unfolding, both from a Sustained and, most importantly, from an OTHER than sustained perspective. The TWO most important patterns to recognize and analyze are the DIP and the BULGE.

A dip is usually NEGATIVE no matter where the horse's NAME ranks on the right of the screen. Contrariwise a BULGE is a positive sign, even when the horse's name is NOT among the first three or four.

At shorter distances a pronounced dip is even more significant. A bulge is important at any distance.

RECOGNIZE THESE PATTERNS

# Velocity

there is a popular misconception that a horse beaten by 4.75 lengths won't come up strong. Off its last line Beaul ranks tied for second. A good enough reason to go back to its better line.

# The Results:

## 4520—FIRST RACE. 1 1/16 Miles. Purse \$25,000. Claiming. Fillies and Mares. 4-years-old and upward. Claiming price \$32,000-28,000

Thormation  
Tester From  
Hot Springs. Ark.  
Tracks:  
Oaklawn, La. Downs

Hi Jim

THESE ARE THE RACES I WORKED UP USING THE  
NEW K GEN PROGRAM WITH THORO-MATION. I ONLY  
GET TO GO ON WEDNESDAY AND THURSDAY'S SO I STARTED  
RIGHT AFTER THE NEW ORLEANS SEMINAR IN MARCH.

THE ONLY RACES I SKIPPED WERE THE ONES I DIDN'T  
HAVE THE WIN HORSE ENTERED OR A MAIDEN RACE  
WITH NO PACE LINE.

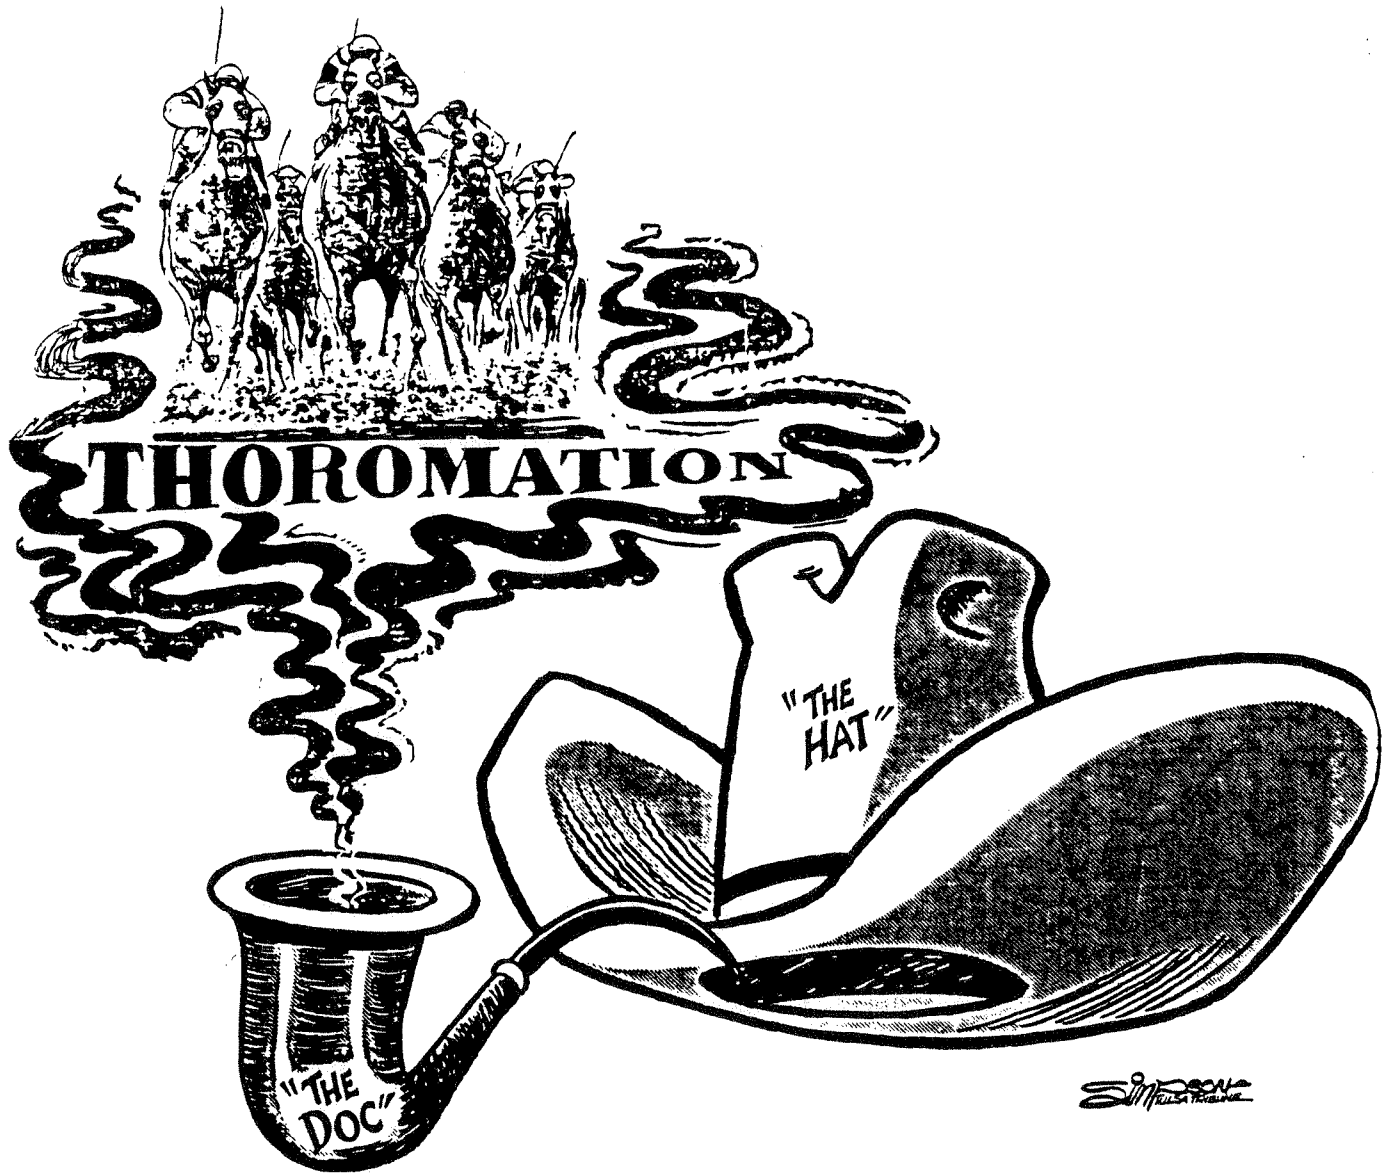

|                |            |
|----------------|------------|
| TOTAL RACES    | 81         |
| TOP 2 WON      | 63 = 77.7% |
| TOP 3 WON      | 68 = 83.9% |
| AVERAGE MUTUEL | \$9.94     |

Two musical notes, one eighth note and one sixteenth note, are positioned to the left of the text.

# DECELERATION PARS & VARIANTS

Before I begin the discussion of DECELERATION PARS let me dwell momentarily on some of the significant FIRSTS contributed by this Methodology. I do so as reminder to all that when these FIRSTS were introduced they were discounted by the mainstream as ivory tower theory at best or just sheer madness wafting like smoke from a pipe.

- 1: The foot per second value of a point of Daily Racing Form Variant and the accurate use of Average Daily Variant; and a way to incorporate both into a more successful variant adjustment.
- 2: Accurately identifying and distinguishing between Early Speed and Early Pace.
- 3: The fact that individual tracks demand different Energy Distributions for winners by distance. A satisfactory explanation for the ancient term "horses for courses."
- 4: The concept of track bias measured in Energy Expenditure rather than position calls.
- 5: The fact that the inter-related energies of the contenders in any given match-up has more influence on the final time of the race than track surface conditions.
- 6: Debunking the popular notion of pace as Final Time weighted by 2nd Call and demonstrating the importance of including 3rd fraction.
- 7: Isolating the importance of 2nd Fraction. (Turn Time.)

That's just seven. I could modestly cite several dozen more. My reason for reviewing some of these FIRSTS is to provide background for my assertion that within the next few years DECELERATION PARS, being presented HERE for the first time, will be in standard usage. Used in conjunction with our PARMAKER program, DC/Pars will offer a distinct picture of designated win parameters that far supersede the current capacities of Par Times, especially as used by the mainstream. Conventional use of par times for making variants and adjustments have been around since the 1920's. Andy Beyer made some minor revisions in their use in 1975. William Quirin added Second Call times and occasional First Fractiones in 1979 and 1981. These created false Turn Times and 3rd fractions. The mainstream placidly accepted the erroneous result. No cries of protest -except from us - and nothing really new has been produced since. Until NOW!

## WHAT ARE DECELERATION PARS

To help explain WHAT, here are the relative DC/Pars for a class taken from races as they were ACTUALLY run at Del Mar All times are RAW.

RAW

| # | NAME | DIST. | 1ST<br>CALL | 2ND<br>CALL | FIN.<br>CALL |
|---|------|-------|-------------|-------------|--------------|
| 1 | STK  | 6.0   | 22.0        | 44.0        | 108.0        |
| 2 | CLF  | 6.0   | 22.0        | 44.2        | 108.4        |
| 3 | NW2  | 6.0   | 22.0        | 44.3        | 109.1        |
| 4 | NW1  | 6.0   | 22.1        | 45.0        | 109.2        |
| 5 | 40M  | 6.0   | 22.2        | 45.3        | 110.2        |
| 6 | 32M  | 6.0   | 23.4        | 46.1        | 109.4        |
| 7 | 16M  | 6.0   | 22.2        | 44.4        | 110.0        |
| 8 | 10M  | 6.0   | 22.2        | 45.1        | 109.4        |

## Matchup

|      | F 1   | F 2   | F 3   |
|------|-------|-------|-------|
| Pace | 60.00 | 60.00 | 55.93 |
| NW2  | 60.00 | 58.41 | 53.66 |
| BCH  | 60.00 | 60.00 | 55.00 |
| CLF  | 60.00 | 58.93 | 54.10 |
| NW1  | 59.46 | 57.89 | 54.10 |
| 16M  | 58.93 | 58.93 | 52.38 |
| 40M  | 58.93 | 56.90 | 53.23 |
| 10M  | 58.93 | 57.89 | 53.66 |
| 32M  | 55.46 | 58.93 | 55.93 |

| Name | Total | 2ndCall | Par Med |
|------|-------|---------|---------|
| CLF  | 57.67 | 59.46   | 0.910   |

| STK  | 58.33 | 60.00   | 0.917   |
| NW1  | 57.15 | 58.67   | 0.922   |
| 40M  | 56.35 | 57.89   | 0.919   |
| 16M  | 56.74 | 58.93   | 0.889   |
| 10M  | 56.83 | 58.41   | 0.919   |
| 32M  | 56.77 | 57.14   | 0.979   |

| Name | Total | Median | Dte   |
|------|-------|--------|-------|
| STK  | 58.33 | 69.08  | 0.995 |
| CLF  | 57.67 | 68.47  | 0.983 |
| NW2  | 57.35 | 68.17  | 0.978 |
| NW1  | 57.15 | 67.56  | 0.975 |
| 10M  | 56.83 | 67.25  | 0.969 |
| 32M  | 56.77 | 65.85  | 0.968 |
| 16M  | 56.74 | 67.85  | 0.968 |
| 40M  | 56.35 | 66.68  | 0.961 |

## Deceleration Pars

| Name | Ep/p | He/p | Td/p |
|------|------|------|------|
| 32M  | 1.06 | 0.95 | 1.01 |
| BCH  | 1.00 | 0.92 | 0.92 |
| 16M  | 1.00 | 0.89 | 0.89 |
| 10M  | 0.98 | 0.93 | 0.91 |
| CLF  | 0.98 | 0.92 | 0.90 |
| NW1  | 0.97 | 0.93 | 0.91 |
| NW2  | 0.97 | 0.92 | 0.89 |
| 40M  | 0.97 | 0.94 | 0.90 |

The first screen consists of the horses and their ACTUAL RUNNING TIMES, by class level. STK is the Bing Crosby Handicap. (BCH). Reading the numbers from left to right. The first column gives us the name, date or other designation under consideration. In this case it is Class Levels. Next Screen: The FRACTIONAL Matchup. Note that with each screen the name order of the entries changes. Next screen, left to right. Total Energy, 2nd Call in F-P-S. And the FIRST of The DECELERATION PAR READOUTS, PAR MEDIAN. This is the Deceleration ration between 2nd call & 3rd Fraction.

The HIGHER the number the LOWER the ratio of deceleration. HIGH is nominally, but NOT not arbitrarily, best. The number most closely approximating the WIN number by class distance and surface is the one we seek.

The 32M claimer on this chart(suspiciously) has the HIGHEST Median Deceleration (979) The next highest belongs to NW1 (922) 40M and 10M (919) are tied for 3rd. STK (The Bing Crosby Handicap) is 917. We used 32M to demonstrate a suspicious line. Without such a demonstration many users might accept a false line and fail to make optimal use of the program. The standard procedure would be to check OTHER races run by 32M to determine whether or not this running pattern was common or a one time phenomenon.

Return to the FRACTIONAL column. First, so that we will not look at Deceleration ratios alone, we must evaluate horses by their F/P/S fractional and second call times and by their Total Energy. Then we look at their relationship to Dte. (DREAM RACE TOTAL ENERGY.) EP/P is the deceleration percentage ration between 1st and second fractions. Because BCH and 16M ran their second fraction as fast as their first, they earn a 1.000. 32M's deviant race becomes even more obvious since two of its Deceleration ratios exceed 1.000. CLF tied with 10M in EP/P.

HE/P represents HIDDEN ENERGY PAR, the deceleration relationship between the 2nd and 3rd fractions. Again 32M's deviant race makes it high. 40M is next at 94. 10M and NW1 are tied at 93. Remember, the highest number representing the least fall off.

TD/P is Total Deceleration Par. This shows how a horse decelerated from the First to the Final fraction. Determining THIS par, among other things, will show us whether or not a sprinter can stretch out longer or if a designated EARLY horse can go wire-to-wire.

Again 32M is high with 1.01. By now even the most trusting of users should suspect the pace line used for 32M. The winner of the Bing Crosby shows its class and is truly best in this important readout. (92). Our 10M horse is tied with NW1 for 2nd. This demonstrates that Ratio of DECELERATION is far more even than running times. Understanding THIS fact and learning how to employ it will give you a big edge over your mainstream contemporaries.

As an Example, we'll match 10M against 16M and rate them against each other using the DC/Par information.

| Matchup |                    |                       |                       |                       |                       |
|---------|--------------------|-----------------------|-----------------------|-----------------------|-----------------------|
|         | F 1                | F 2                   | F 3                   | Total                 | 2ndCall               |
| Pace    | 60.00              | 60.00                 | 55.00                 |                       |                       |
| 16      | 58.93 <del>0</del> | 58.93 <del>0.0</del>  | 52.38 <del>1.28</del> | 56.74 <del>0.09</del> | 58.93 <del>0</del>    |
| 10      | 58.93 <del>0</del> | 57.89 <del>1.04</del> | 53.66 <del>0</del>    | 56.83 <del>0</del>    | 58.41 <del>-.52</del> |

## Deceleration PARS

|    | Par Med               | Ep/p                  | He/p                  | Td/p                  |
|----|-----------------------|-----------------------|-----------------------|-----------------------|
| 16 | 0.889 <del>0</del>    | 1.000 <del>0</del>    | 0.889 <del>-.38</del> | 0.889 <del>-.22</del> |
| 10 | 0.919 <del>+.03</del> | 0.982 <del>-.18</del> | 0.927                 | 0.911                 |

| HORSE | F-1   | F-2   | F-3   | 2-C   | Total Energy |
|-------|-------|-------|-------|-------|--------------|
| ===== | ===== | ===== | ===== | ===== | =====        |
| 16M   | Even  | +1.04 | 0     | +.52  | 0            |
| 10M   | Even  | 0     | +1.28 | 0     | +.09         |

| HORSE | Med/P | EP/p  | HE/p  | TP/p  | Final Score |
|-------|-------|-------|-------|-------|-------------|
| ===== | ===== | ===== | ===== | ===== | =====       |
| 16M   | 0     | 0     | 0     | 0     | 16M = 1.56  |
| 10M   | +.03  | +.18  | +.38  | +.22  | 10M = 2.18  |

NET ADVANTAGE 10M = .62

On the surface, because of its TOTAL ENERGY and 3rd Fraction Advantage, 10M can go up in class and compete well against 16M claimers. By keeping race record from DECELERATION PARS, YOU will immediately be able to tell whether or not a .62 total advantage is ENOUGH for a horse to make this class rise. You will be able to determine at a glance whether a 1.28 3rd fraction is sufficient to overcome a deficiency of -1.04, Turn Time and a -.52 at the 2nd call.

In the final column, Dream Race Total Energy (D/te) 16M and 10M are tied. This tells you that NO adjustment should be made if these horses were to run against each other.

## CONVENTIONAL PACE OF RACE PARS

=====

The chief reason why mainstream writer/experts dwell so much on the alleged importance of EARLY SPEED is because of the misleading information supplied by their conventional Par Time Charts.

Let's look at a composite of ALL 6 furlong races carded for 3YO & UP MALE 10 thousand claimers in 1989.

When doing Pace of Winning Horse PARS on your PARMAKER program, always follow the directions from the program documentation in FU 27. ADD the beaten lengths to the pace times as one fifth per length or portion of length beaten. Then include beaten lengths in the BL columns for your edification. Now, look at the comparison citing the difference between PACE of RACE and Pace of Winning horse pars:

## PACE of RACE PARS

Del Mar \$10,000 Clm. 3YO Up Males

PACE of RACE pars gave the false illusion of a track running much earlier than it actually did in 1991. The average running style, POR, was Presser.

## PACE of WINNING HORSE PARS

Same Category

PACE of WINNING horse pars clearly showed that the Energy exertion of winners was SUSTAINED.

## PACE of RACE PARS

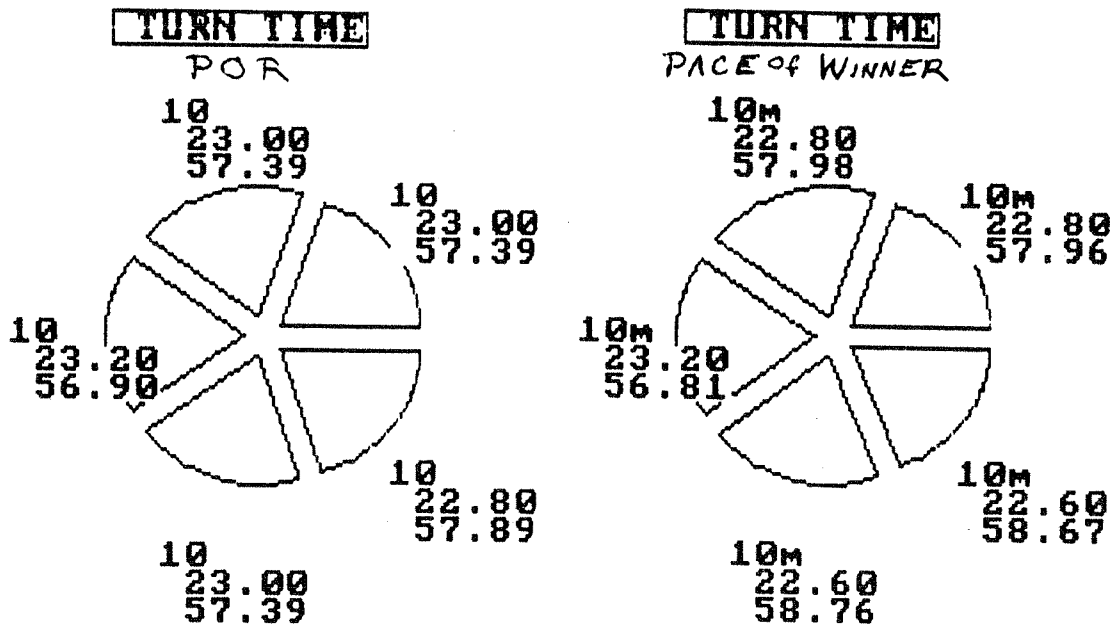

| F-1   | 2nd Call | F-3   | Final | Run Style |
|-------|----------|-------|-------|-----------|
| 21.42 | 44.47    | 25.08 | 109.4 | Presser   |
| ===== |          |       |       |           |

## PACE of WINNER PARS

| F-1   | 2nd Call | F-3  | Run Style |
|-------|----------|------|-----------|
| 22.26 | 45.16    | 24.4 | SUSTAINED |
| ===== |          |      |           |

Of primary interest is that the POR produces an average running style of PRESSER while Pace of Winning horse accurately reflects Del Mar's 1991 Sustained bias.

With TURN TIME being such a vital factor at six furlongs, the difference here is noteworthy:

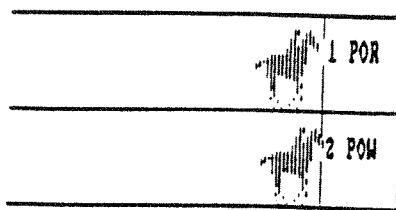

While Turn Time PACE OF RACE times average 23 seconds, the TURN TIMES of WINNERS were: 22.4, 22.3, 22.4, 22.3 and 23.1 for an average of 22.4.

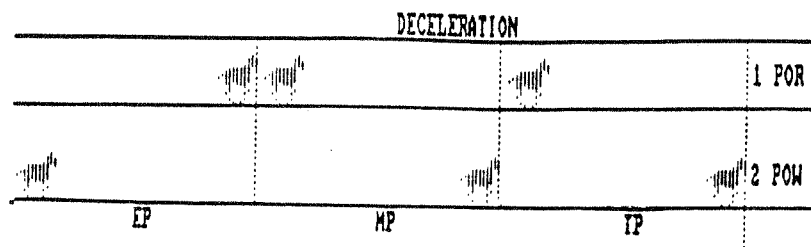

Handicappers using only Pace of Race Pars would be handicapped by not realizing that WINNERS ran faster 2nd Fractions. Perhaps this is why so many Mainstream Experts find Del Mar so difficult and often lose both their expertise and their bankrolls when handicapping Del Mar.

The average number of beaten lengths at the Second Call for WINNERS is 2. Their average time at the 2nd Call is 45.2 as opposed to the Pace of Race Par of 44.44. The average First Fraction PACE of RACE is 21.44. For WINNERS it is 22.25. The difference between WINNER times and the PACE of the RACE Par Times at Del Mar (and everywhere else) is truly significant. Those using PACE of RACE Pars are severely disadvantaged.

Now let's match the PACE of RACE Vs. The PACE of WINNERS against each other on THOROMATION and Stop Action Instant PREplay.

POW only wins by a nose in THOROMATION. But that nose is often the difference between cashing tickets and going away empty. On the Stop Action Instant PREplay screen the incremental running of the race is more clearly defined. The POR takes a clear EP lead but is overtaken by mid race and **POW** comes on strong at the finish.

Each year, those of us who follow the press read statements from one or more of the established mainstream experts, about some track doing them in. In the past two years Andy Beyer, has fled both Del Mar and Saratoga, complaining that he couldn't get a "handle" on those tracks. James Quinn frequently compares his success at Santa Anita with his lack of success at Del Mar. To their credit, both of these pros are open and honest about their plight. In both these cases, as with similar protests from other established experts, the reason for their lesser showing can be traced directly to their perception of PARS!

They are using PACE OF RACE PARS which ALWAYS give the impression that a track is running EARLIER than it truly is. Why these otherwise bright - even brilliant - individuals persist in viewing pars from an invalid perspective is beyond me. Perhaps it is because POR pars have for so many generations been established as THEE WAY. Since these gentlemen are such an integral part of the establishment maybe they are blind to new realities.

#### DC/PARS

=====

This program, available on all IBM compatible and Sharp Handhelds, Price: IBM & Compatible \$69. All Sharp \$49 (1261-2, 1350, 1360) However the programs will be given away FREE as a bonus to all those attending the Las Vegas Seminar, November 22-23-24. We will also present an in-depth symposium on its use and predictive power.

USING DC/PARS IN ACTUAL RACES FROM THIS MANUAL

## DECELERATION PARS & MIXED DISTANCES

### 1. Sprinters in a Route:

Look now at the 2nd Race at Longacres (LG2). Distance 8.5 furlongs. We have included THREE qualifying sprinters with the only TWO ROUTERS who qualify.

See LONGACRES, 2nd Race (LG2) printed earlier in this manual.

In a ROUTE RACE where one or more sprinters seem to qualify, create both a SPRINT and ROUTE Dream Race as I have done here. DR.S (Dream Race Sprint) and DRt. (Dream Race Route). The Dream Race E.S.P. Energy expenditure Running style is EARLY at both distances. Therefore we want a horse who can either completely dominate the race from an early lead or one who can successfully PRESS early leaders with inadequate sustained energy. With THREE sprinters trying to stretch out to 8.5 furlongs, the MOST important readout is TOTAL PACE PAR (TP/p). Horses should be ranked here on the ROUTE dream race since THAT is today's distance.

In TP/p CLEM is even. It runs exactly to the ROUTE PAR. LITS is deficient by -8 and GYPS by -6.

In the EP/p AND the PAR MED. categories each contender should be ranked by the distance it is COMING FROM. The sprinters against DR.S, the Routers against DRt.

At EP/P CLEM is +5. LITS is a +1. GYPS is -1. GOOD is minus 1 from the ROUTE par while MAI is -4.

In Par Med. LITS is deficient by -.26, GYPS is +.04 but CLEM is tops with a +.34. Of the Routers MAI is +.08 and GOOD is -.21.

HIDDEN ENERGY PAR (HE/p) represent the deceleration ration of the final TWO increments. Hence Sprinters should be weighed against BOTH the sprint and route HE/p, but RANKED against the DRt. In this category ONLY CLEM and GYPS with -4 and -3 deficiencies have a prayer at today's distance. LITS is out of it with a -.8. GOOD is -2 but MAI is +4.

This leaves only the Dream Race Total Energy. Here each dream race earns an arbitrary 0.100. LITS and GYPS are -2.0 CLEM is deficient by only 1.2. The LEAST deficient ROUTER is MAI -.86. GOOD is -.91.

Weighing each contenders plus and minus deviations from the PAR designations, LITS and GYPS are eliminated. GOOD is a distant third. MAI is tops followed closely by CLEM.

That's how they finished.

Using DC/Pars to eliminate  
Non-Contenders & Pin point  
Win & Place horses  
A Secondary Track analysis  
By Bruce Jorgenson

On New Years Day morning I received a call from Doc asking if I would contribute to the DCPARS' manual and the answer was a hearty affirmative. He was particularly interested in its application to a minor track with lots of off tracks which fits the Pacific Northwest to a tee. During the winter months our statewide satellite provides us with tracks that Tom Hamilton's Comparative Track Class Chart rates as level 10 out of 12 ratings....namely Playfair in Spokane and Yakima Meadows in Yakima, Washington, both with plenty of weather.

We'll take these tracks one at a time in chronological order as I started what is my continuing odyssey into the world of DCPARS. First to Playfair (Pla).

The Longacres meet finishes in latter September followed immediately by Pla which I play only once or twice a week thru November as it coincides with pheasant hunting season. In early October a copy of DCPARS arrived in the mail. There had been one article in the Follow Up about same, but I knew nothing more about the program. Here is where the journey starts!

For some reason Doc just seems to know. He knows that I like to tinker and model and probably would be using DCPARS at whatever we had running. From latter October on Pla certainly was an off track as the mud was so deep that the horses were not running on the track, they were running IN the track, taking up to 116 to go 6F. As for class, if over half of the races are for 2500 claimers with lots of non-winners of 2 and non-winners in 1991 mean a minor track, Pla is the place.

That's the setting to which DCPARS was applied and I started just what I would suggest you do.....MODEL and TEACH YOURSELF about DCPARS and how to use it on your track. This first step at Pla was very primitive and is nowhere near using the full potential of the program or its exact purpose but it gets much better for Yakima later on. Here's a quick and dirty way to get started. I did not know what factors were the strong ones for my track. In fact, I didn't even know what the factors really were, or what they measured; but I knew how to find out.

I loaded DCPARS into the computer, brought up each of the last 6 to 8 Pla races I had run in Energy from my save disk and printed them out. The next step is easy, just mark what factors the winning horse stands tall in. In this case it was always the top 3 in Dream Race Total Energy (Dte) with Total Deceleration Par (Td/p) sometimes. This was the starting point and enough to handicap with. I didn't even know that Dte was basically just the fastest horse, but top ranked Dte horses were winning.

Here are the 28 races that I played with DCPARS. At least five horses were entered in each race and I only used races where there was a useable off track or fast track line for each contender. Every race was actually run on an off track.

### CODE:

Dst = Distance  
(S) Sprint (R) Route  
Dtone = Ranked 1st in Dte  
(Dream Race Tot. Energy)  
Dttwo = ranked 2nd -etc.  
TDone = Ranked 1st in  
Td/p (total Deceleration Par  
TDtwo = ranked 2nd -etc.  
Par/Med = Par Median

This test does not include  
any analysis of HE/p  
(Hidden Energy Pars) Or  
EP/p (Early pace pars)  
Results were significant  
even without them

### NOTE:

All Races were run on  
OFF tracks -Sloppy,  
Slow or Muddy

\*

This analysis should be a  
tremendous boon to those  
clients investing at tracks  
where weather is a  
significant factor.

DST is distance and sprint (S) or route (R) made no difference.

DTONE is ranked first in Dte, DTTWO is ranked second in Dte, etc.

TDONE is ranked first in Td/p and TDTWO is ranked second.

Of the 28 races, I left the winner out in number 20. Of the 27 remaining races here is the breakdown:

1. Number 1 in Dte won 11/27 and placed 6/27.
2. Number 2 in Dte won 9/27 and placed 2/27.
3. Number 3 in Dte won 4/27 and placed 7/27.
4. Number 4 in Dte won 3/27 and placed 4/27.

Add up the wins and the top 4 in Dte won 27/27 which tells me that at Pla on an off track these are going to be the horses that go into my main handicapping program. The top 3 won 24/27 which is where to place your bets after running them.

5. Number 1 in Td/p won 7/27 and placed 3/27.
6. Number 2 in Td/p won 8/27 and placed 3/27.

For the horse that scores in both the top 3 in Dte and the top 2 td/p it becomes lethal. We have 17 of these and they won 11 times, placed 6 times. Close to a one horse bet, or at least a horse to box with 2-3 others for an exacta.

I know this is not the best way to use the program, but it was a start. This worked on these races at this track while it was off and I used only selected races as noted above in the contender/pace line selection. We'll use the program better, and for all the races, later when discussing Yakima Meadows.

Before leaving Pla lets do what was my favorite DCPARS race. It's the 7th race on October 23rd and is a typical 2500 claimer for the gals, 3 yrs/up, who are non-winners in 1991. The about 6 1/2 is actually 6.32F and I use that to enter horses from this distance.

Rare Sweep had a good race last, but is a router and looking at how far back she always has been against slow times at much faster tracks I will not consider using her.

Native Kelp is coming off layoff with properly spaced workouts, but on 1Aug90 off layoff at Pla he couldn't even run a decent 4f. Sure not my type of even a junk horse...out.

Lineup The Drinks gets an excuse for the last race. Next back looks like she had some run and I'll use that.

Restricted is dropping in class and ran the fastest race last, a 96 taking SR + 1/2 DV. Last line looks ok.

Clear Water is slow, and still a maiden...out.

Teaway Lass ran well for 6f in a route last and has 8 acceptable races in a row. If I take her last sprint (82 SR) she is not treated fairly, so back to 15 Sept for the line.

Proud Dreamer has the second fastest last race, is dropping, and was in tandem with Restricted....last line again

Electric City Lady....slow and out

How Sensitive gained 8 plus lengths and 4 horses last and is third fastest. A keeper and last line is the one.

There they are. Five horses into DCPARS, print it out, and save the race to disk so that I can bring it up on ENERGY. Wait a minute....look at the printout and my limited model in use for Pla. Restricted is number 1 in Dte, Proud is 2nd. and they have a big, big edge over the 3rd horse...a 987 and 985 with How at 975 for 3rd. Straight down the readout to Td/p and look at the monster advantage Restricted has over every horse with his 978!

Remember how my profile pointed out the top 3 in Dte and also top 2 in Td/p. IF ever a horse fit this, it is now. The public is off in never-never land betting their favorite jockey and Restricted is at 7-1. Proud is a weak second choice at number 2 in Dte and 3 in Td/p and is at even bigger odds. Most of the bet goes to Restricted...a little on Proud....several \$2 exactas from Restricted to Proud...a couple back.

Sorry I don't have a result chart to print, but the paper doesn't print them for Pla. Restricted won and paid \$16 even. Proud ran second and the \$2 exacta paid \$97.80. Restricted was a wheel in the \$2 daily triple with a \$6.80 favorite in the 6th and a easy \$10.40 horse in the 8th for \$393.60. DCPARS makes this race a gift!

Playfair closes at Thanksgiving and Yakima Meadows comes on line in early December, down for the holidays and back up until Longacres opens in April. YM is rated at the same level as Pla, but this is not true. YM has bigger purses, is a mile track not 5/8s, Pla horses do not win much at YM, Pla horses may not score a win all meet at Lga, and YM horses win often at Lga.

YM weather related surface changes can be off from rain or snow, but it is generally fast. It is often frozen, but can turn to muddy during the day if it is warm enough to thaw. It is now January and one day earlier in this month it had thawed a bunch making the track just plain deep glue. It was so bad that between races the tractor got stuck. It was on the stretch and luckily was away from the rail near the grandstands. They just left it there and continued to run races.

I started YM play at the first of the year and have expanded my DCPARS program to include Par Med and the actual deceleration for Dte, Id/p and Par Med. All these are being put into a data base along with race info like sex, claimer, age, distance, NW/2, etc. so that it can be recovered, modeled, and form the parameters of some sort of pars. This is starting to get into the real purpose of the program and the results are worth far more than the effort. If you want to learn while you learn, just try this.

Again have no result charts printed in the paper and I am not using the winners win line. I model from my handicapping and use the line that I used for the horse that won the race. In fact, I do that for any modeling that I do with any program. The reasons are very simple: (1) I have the data already available from my printouts. (2) It saves time and requires no extra work. and (3) Most important of all. I am FAR more interested in knowing what a horse has to have to go into a race and win with than I am in knowing what a horse won a race with. It's like looking into the future instead of back. Most model from win lines and surely are not wrong....I just prefer this and it works fine.

Here are current DCPARS models for claimers at YM. As I list more races I'll break them out by sex, age, claimer, etc, to get more refined numbers. Lets take a look at the data so far and see what there is to be learned. First what the headings mean:

1. TYPE is the horses running style as per the Engen with the program.
2. DTE, TDP, PARM is the horse's ranking for Dte, Id/p, and Par Med.
3. DTENO, TDPNO, PARNO are the deceleration numbers for Dte, Id/p, and Par Med.
4. SPPTS in the sprint to route profile is the amount of energy points the sprinter had above that of the largest router.

At least five contenders have been entered for every race. Every race for every card that I have attended is entered into the data base. Phase 1 has been used for contender selection....run the horses and use the top five TRP's plus ties into DCPARS.

OK, look at the claimer sprint profile.

## Yakima Meadows - Profile

1. Note how the track changed after record #12. Type changed from all E's to S's, and the numbers changed from upper 800's to 900's. They could finally get dump trucks on the track without getting them stuck and the winter's sand was added to the surface. We will profile from record 13 forward.

2. The Dte ranking shows all over and this is as it should be...the fastest horse is not always winning as was true at Pla. I put this in to find out. It also means that the Dte number has little if any use for us at this time.

3. Id/p shows that the top 3 numbers are winning sprints and the factors should be modeled. On the low side there is a 887, 891, and 903. The 887 goes with the only EP type we have and he probably ran a better number to win. 887 and 891 should go as aberrant, and 903 should be kept as the low. Maybe not as the numbers gap to 908 to 913 and are then really solid up thru 936.

Here is my current Id/p sprint profile:  
913 - 936 with 903 to 912 considered marginal.

4. Par Med has an 898 for low which goes with the one EP type with the next number being 906. The high is 943 with the numbers running very regular up to it. Out goes the 898 with the profile being:

Par Med 906 - 943

On to the route profile for claimers which has few races:

1. Type is evenly split for early and off the pace. What is to be learned here is that both can win.

2. Dte is the same message as before. Note that all kinds of rankings are winning which means not the fastest horse and Dte numbers have little meaning.

3. Id/p: Not really a lot to learn yet about the early horse that gets out in front and runs uncontested to win, but look at the 3 SP guys. Their numbers are very tight being:

924 - 932

4. Par Med: The same story for the early, but the SP horses are again very tight at this point being:

922 - 932

The sprinters winning routes profile is just plain money in the bank if used:

1. Type is sustained in 4/5. Early stole one race.

2. Dte again has little use.

3. Id/p: Throwing out the 895 of the early horse the profile is:

929 - 970

4. Par Med: Early horse's 892 out and the profile is:

934 - 971

5. SPPTS: The sprinter must also have at least 7 energy points over the biggest one or two routers as shown in your Engen in Energy or Thoromation.

How does this all work when doing a race? Pretty darn good lots of the time. There will be races that are so junky on a track like this that no horse is even close to profile which can be passed, or other tools used. But, for others, it is like shooting a rifle at the winner. We'll look at the readouts only for the three claimer sprints from January 24th, and then do two races from the card yesterday, January 29th.

Race B:2402

1. Id/p (Deceleration Pars section):

SENT's 904 is marginal  
JUST's 871 is low....out  
SERG's 922 is ok  
KNOT's 958 is high...out  
KADA's 949 is high...out

2. Par Med:

SENT's 904 is low...out  
JUST's 882 is low...out  
SERG's 914 is ok  
KNOT's 953 is high...out  
KADA's 937 is ok

That leaves us with Serg ok in both Id/p and Par Med. Kada is ok in Par Med, but out in Id/p. Sent is marginal in Id/p and out in Par Med. Only one horse is ok in both factors...SERG. He wins and pays 6.40. KADA who is one of the 2 horses that matches one of the factors runs second. Exacta paid 29.00.

Race B:2404

1. Id/p:

BOL's 866 is low...out  
HARR's 877 is low...out  
TRIP's 916 is ok  
CRIM's 927 is ok  
JAMIE's 940 is high...out  
TOUG's 944 is high...out

Par Med:

BOL's 870 is low...out  
HARR's 885 is low...out  
TRIP's 913 is ok  
CRIM's 920 is ok  
JAMIE's 934 is ok  
TOUG's 948 is high...out

Only CRIM and TRIP were ok in both. Unfortunately they were coupled, had the two highest percentage jocks up, and the public drove the entry down to 1:1. CRIM won, TRIP placed. The pay was 4.40 win, 4.20 place.

Race B:2406

Id/p:

FOXY's 870 is low...out  
LATE's 905 is marginal  
PREV, JESS, SING are ok

Par Med:

FOXY's 874 is low...out  
The other four are ok (LATE is just barely)

PREV, JESS, and SING are ok in both....LATE is marginal. PREV wins, JESS second, LATE third. 5.20 to win.

These three races had low pays which is often the case when favorites win. If I had chosen the card prior it would have worked just as well and the sprint pays were:

5th: Down to 3 horses which won and placed...41.60 to win, 154.30 exacta.

8th: Down to 3 horses which ran 1, 2, and 3....31.60 to win, 84.00 exacta.

9th: Down to 2 horses (one with a marginal Td/p). The horse good in both won and paid 9.00.

I could have used this card, but winning prices come in all sized packages and we have to accept that. Besides we are always showing how to get the longer horse, not the short one.

Now to do two races from the card at YM that I played yesterday, January 29th...a sprint, and a route with sprinters in it.

The 6th race is just a standard 6F for females 4 yrs/up for 2500 claimer. I ran the horses in Phase 1 and kept the top 5 TPR's...Leeroyal, Jolene's Bo, Skykomish, Dancing Wench, and Tenderness. Those 5 horses into DCPARS on the checked pacelines.

**6 FURLONGS.** (108<sup>2</sup>) CLAIMING. Purse \$3,000. Fillies and mares. 4-year-olds and upward. Weight, 120 lbs. Non-winners since November 19 allowed, 3 lbs. Since October 1 allowed, 5 lbs. Claiming price \$2,500.

**BUTAZOLIDIN**—Leeroyal, Jolene's Bo Bo, Suzie Q Singh, Pyritetta, Skytomish Capar, Dancing Tender, Tender Tenderness.

**R. M. S. by Leroy S.—Miss Royalty, by Admiral Skipper.**

Id/p: TEND and LEE are the only 2 within the profile.

Par Med: TEND, LEE, and SKY match the profile.

Only two horses match both, and Leeroyal wins paying 6.20. Missed a great exacta as my place profile shows TYPE 'E' horses running second almost every sprint. Jolene's was the only Early out of the Engen....went to sleep and did not play her and missed a 115.80 exacta.

The 7th race at YM is not what many would call a great race. It is 4 yr fillies, NW-2, going 8F, and has a mix of sprint and route lines. It is a great chance to use our sprint-to-route profile though.

7

1 MILE.

(1.35') CLAIMING. Purse \$3,800. Fillies. 4-year-olds which have never won two races. Weight, 120 lbs. Non-winners since November 19 allowed 3 lbs. Claiming price \$6,250.

LASIX—Me Cajun, Spanish Siren, One Live One, Aftons Jewel, Angelique, Rockjack Rose.

BUTAZOLIDIN—Cool Grits, Me Cajun, All Under Heaven, Spanish Siren, One Live One, Spanish Nell, Aftons Jewel, Angelique, Babe's Irish Joy, Rockjack Rose.

Into Phase 1 go the horses and the top five are Me Cajun (used 2nd back due to fast splits last race), All Under Heaven, One Live One, Spanish Nell, and Angelique. Again the paelines used are checked that were entered into DCPARS.

Check the Type in the Engen readout....3 horses are early which means little chance for an early horse. The Thoromation Engen shows All Under Heaven has 7 energy points and Spanish Nell has 9 energy points over the routers.

Now lets compare the horses to our Profile:

1. The routers ME, ONE, and ANG are all early as noted above and there are just too many of these E's. Not one of the three horses even comes close to the minimum sustained route Id/p and Par Med profiles numbers for sustained horses.

2. Sprinters using the Sprint-to-Route Profile:

All-S does not meet the needed Id/e or Par Med numbers, but she is ahead of all the routers. She does have 7 energy points which satisfies the energy difference.

NEL-S (Spanish Nell) does barely make the Id/p with her 930, and even though she does not make the Par Med numbers she does have a 910 which is the biggest, and closest to profile, number there. The Engen shows her with 9 energy points over the routers which satisfies this.

Without question the two sprinters look best in DCPARS. Save the race to disk and punch it up on Thoromation and playing it through the Automatic Projection option and it shows everywhere as NEL-S running first with ALL-S second. That's how they finished with NEL-S paying 11.40. Got the winner easily and did not buy an exacta which paid 75.60.....shame on me.

That's where I am with DCPARS. I think it is a great program.

#### SUMMARY:

-----  
I first tested DC/Pars late in October of 1991. Since then it has produced results that at times seem like magic. However, I know that in Handicapping there is NO SUCH THING AS MAGIC. Seemingly magical results come from the ability to recognize PATTERNS. This is what everyone MUST learn for themselves through PRACTICE. DOING IT!

I know that a lot of Methodology clients call Howard, Jimmy or a Teaching Member whenever a problem arises. I don't think I'm any smarter than ANY of you. But when I face a problem I first try to solve it MYSELF. Only after making a concerted effort, if I still cannot find the solution, I will call Howard or Jim.

Let me stress the fact that I learned how to make successful use of DC/Pars with NO documentation or manual: only what was in FU #29. From this procedure comes the TRUE JOY of success.

Doc Sartin.....

## JOCKEYS - TRAINERS &amp; HORSES

While reading a recent edition of RACING ACTION I came across this statement from one of the best and most durable turf writers in all of NorthAmerica.

I'm not trying to denigrate the man in any way so I'll withhold his name. He's been a highly renowned writer/expert since the 60's when I first saw his name in some back issues of American Turf Monthly. His words are paradigms of Mainstream handicapping. And my only point here is that THIS is truly reflective of the mainstream thought:

Don't try to be an analytical genius when you read the past-performance lines in the *Daily Racing Form* or *The Racing Times*. Use what you find in them as a source of information, but focus most of your attention on who is training each horse, and which jockey is riding it. The unspoken presence of the jockey and trainer is much more valuable than data in a past-performance line, for good jockeys and good trainers just keep right on winning, at all kinds of odds and with all kinds of horses. Stick with trainers who win a decent percentage of their races, and with jockeys who ride winners almost every day.

Ironically in the same issue of RACING ACTION they published THESE statistics -as of Sept.1, 1991.

One of the most astute writer/experts of this century disdains the idea of handicappers trying to become an "analytical geniuses" through reading Past Performance charts. His is a leading and influential voice in the field. Few of his peers would question his wisdom. Most reflect it in their own writings. Therefore, anyone who becomes even a bright analyst of Past Performance data -much less genius - will have a marked edge over the rest of the crowd vying for the pari-mutuel win dollars.

Producing a computer program that can function ingeniously does not require a programmer who is a genius. (although it helps.) The creative programmer can combine moments of insight accumulated over years of research and, more importantly, winning EXPERIENCE, and synthesize them gradually into one program which will, in an instant, produce the end result of years of acquired wisdom and information.

In today's market we see a plethora of programs that merely string together LINEAR information weighted by subjective data and then averaged together. No wonder expert writers like James Quinn and the unnamed author of the advice on the previous page, have little use for most of the computer programs being offered today.

To the insightful and intuitive handicapper the Past Performances contain more information than is even dreamed of most philosophies. It remains for those possessing rare intuitive insights to interpolate for their less bleeds brethren.

There is no better tool for this interpolation than the computer.

The general public bets  
on Trainers & Jockeys.  
**WE** (should) **BET** on  
Horses.

Here are some stats,  
fairly universal at  
**ALL** tracks, that show  
**WHY!**

# THOROMATION & GINNY BUTLER'S \$101 WINNER -----

This 4th Race at Longacres on September 12, 1991, will never qualify as a textbook or classic demonstration of THOROMATION. Too many variables exist for it to be anything other than a highly speculative venture rather than a handicapping staple.

A: It is a maiden race with several first time starters.

B: Today's race is at six furlongs. The WINNER'S Pace Line was taken from a Five furlong race. It had previously failed at both 5.5 and 6 furlongs. The other contenders came from 5.5 and 6 furlongs.

C: Ginny constantly infuriates here macho male handicapping compatriots with contrarian pace line selection classifications. When her female intuition is "ON" she is devastating.

D: If she applied the same reasoning to all races as she did to this one, those "macho" males would become justified in becoming even more so. Fortunately she does not. This is not a bread and butter race, even for her.

E: By her own notation she just put "a couple of bucks across the board" on the horse. So she wasn't all that enthusiastic about its real chances.

F: On that same day at LONGACRES she won four of the five races that she wagered on. These four were solid picks and not off the wall.

I'm including the race ONLY because certain vital THOROMATION secondary readouts demonstrate clearly why the horse won. The Animated "Moving Horse Screen does NOT get this horse in the top 2. EXDC Stop Action instant PREplay does. On Both PREplay screens it IS the designated place horse. So, regardless of any other factor anyone using this race would earn the \$33.40 Place price.

## RAW ENERGY FACTORS

| Name  | Total  | Hidden | Fx    | Med   | Lex   | 3rd   | ESP Type  |
|-------|--------|--------|-------|-------|-------|-------|-----------|
| DOCS  | 182.95 | 85.40  | 88.92 | 88.11 | 31.89 | 32.53 | Sustained |
| MORN  | 180.50 | 83.93  | 88.89 | 89.11 | 30.89 | 30.78 | Early     |
| VAL   | 161.85 | 85.51  | 88.02 | 88.88 | 31.32 | 31.82 | Sustained |
| CHRIS | 182.08 | 84.28  | 88.34 | 89.84 | 30.38 | 30.73 | Early     |
| FLORL | 159.28 | 83.73  | 88.00 | 89.91 | 30.09 | 29.58 | Early     |
| FLO-2 | 158.58 | 84.11  | 85.88 | 89.71 | 30.29 | 29.58 | Early     |

With such a wide TE disparity, a Manual (2) adjust is required.

My chief reason for using this race is to point out the FOUR specific areas that point to FLORL chances.

NONE OF THEM are found in a SORT!

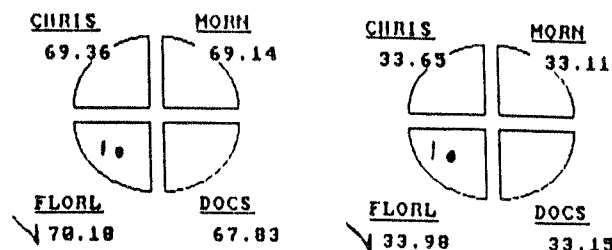

- 1: #1 EXDC. In maiden races the horse who dominates here frequently intimidates other maiden so that they do not run to their projected later fractions.
- 2: A dominant Median Energy percentage. The horse sorely needs this to compensate for its weak 3rd fraction and the fact that it is going a furlong longer today.
- 3: Number ONE turn time. In Maiden races and in races where Maidens go against winners for the first time, THIS is ALWAYS a factor of the UTMOST importance.
- 4: Now look at the EXDC DECELERATION RATIO numbers:  
 FLORL is #1 in BOTH categories 1 and 2. Weakest in 3, yes.  
 But at 49.70 to one, I, too, would have a few bucks across the board on this horse.

WITH INSTANT PRE-PLAY

## CLIENT REPORT FORM

The vast majority of ENERGY/KGEN clients WHO KEEP FAITH with their signed contracts and continuous progress reports and follow the suggestions we send back to them, critiquing their reports, are enjoying a winning record and Return on Investment. Some of them for the first time in long years of handicapping.

It can be said, with little room for argument, that our insisting on RECORDS is as responsible for ENERGY/KGEN's success as the programs themselves. Failure to keep accurate and consistent records is an escape mechanism of losers which is comparable to the ostrich's quaint habit of hiding its head in the sand to avoid danger.

Virtually every ENERGY/KGEN client who has failed and complained whiningly, has been in breach of contract: has not sent reports with even a modicum of consistency or has insisted on wagering on a self-perceived TOP CHOICE only.

This has always been a TWO horse Methodology. This fact will become even more apparent in THOROMATION™ AND PREVIOUS PROGRAMS IS THAT THERE WILL BE no room for doubt AS TO THE top two. This statement is predicated on your properly utilizing your Stop Action Instant PREplay screens for confirmation.

It is essential that these report forms be filled out CORRECTLY as prescribed. For those who enjoy immediate success with THOROMATION™ we will relax the contractual clause demanding constant reporting and leave the decision up to you except for MONTHLY status reports. But that is AFTER you are enjoying the prescribed success rate.

Here I have filled out a report form based on the figures produced by the race between A, B, C & D.

When the winner is left out, mark with an X.

NOTE CAREFULLY that I have entered NAME of the horse AND beside it the ACTUAL order of finish in the race. B won, C was second and A showed.

My report is for AUTO ADJ. You should make a similar one for the results produced on ALT. Adjust, until such time as you are proficient enough in choosing your adjustment to be correct the majority of the time. DON'T PRE-suppose this ability. In the early stages, report using BOTH adjustments as directed.

## Deceleration Pars --A Test

Control Track: Hollywood Park

After reading PACE MAKES THE RACE and attending the November Las Vegas seminar, I couldn't wait to get home and put the Total Pace Ratings (TPRs) to work. I thought this would be the ideal tool to ease my wife into non-linear handicapping and tighten up my contender selection process as well. Also, intrigued by Dr. Sartin's article in issue #29 of The Follow Up and Bruce Jorgensen's seminar presentation, I wanted to figure out how to fit the Deceleration Pars (DCPARS) program into my handicapping process as well.

The first step was to make a TPR profile for the Fall/Winter meet at Hollywood Park. I soon found out that while it was very easy to identify the top two win contenders in some of the races, it wasn't always so simple. There were quite a few races that six, seven, and sometimes eight horses fell within the track profile win parameters. Well, what do you know, a made to order situation for testing the Deceleration Pars program. Using only the "problem" races, I tried this out on paper with extremely encouraging results.

The next step was to apply the only test that counts -- betting real money on races before they're run. I would use the TPRs for contender selection and rely on DCPARS to sort them out and determine my investment decisions for the next full week of racing, December 11th through the 15th. I ended up working 24 races during the week, which is about average for me. The starting bankroll for the test was \$200.00; minimum investment of 5% of bank or \$10.00 whichever is greater, with the investment split 60/40 on the top two DCPARS horses. The track was labeled good on the 11th and 12th, and fast for the remainder of the week.

I always handicap for a fast track, even if it's raining cats and dogs or they're running in goo up to their knees ankles (O.K., I stand corrected, horses run in goo up to their knees in Washington State -- in Southern California, on rare occasions, they may run in goo up to their ankles). My paceline selections are from fast or firm surfaces whenever possible. I do follow The Rule in PACE MAKES THE RACE and calculate TPRs for the last pace line for every horse in the races that I work. If the last pace line happens to be on an off track, I also calculate TPRs for representative fast track performances. I want to know how each horse normally distributes its energy. Then I let the races tell me whether or not a specific energy distribution and/or running style is being favored today. However, my experience with DCPARS tells me that you really don't need to be concerned about any biases if a 67% win percentage keeps you warm and happy.

Be aware that some of the contenders in some of these races were either sprinters stretching out into a route or routers shortening up into a sprint. These situations come up quite often and this is how I handle them. I have been a firm believer and user of the sprint to route multiplier ever since Dr. Sartin unleashed this tool a few years ago during a workshop. I know, I know, I know -- I've heard the complaints. "The multiplier projection is too fast to be useful." "The multiplier requires too much maintenance." I happen to have a very high regard for the opinions of most of the people I've heard this from. Although I don't completely agree with them in this area, nothing has changed. I still respect them and I still have a high regard for their opinions. Anyway, the bottom line for me is this: I have used the multiplier without making a single change ever since I heard the Doctor describe the procedure and it still works for me. I have my Sharp programmed so that whenever I enter a sprint pace

line while I'm working a route it gives me the %Early and %Median for the pace line. (This is to compare the horse's energy distribution with Tom Brohamer's guidelines for sprinters stretching out -- less than 52.50% Early is preferred. This equates to approximately 68.85% Median for those using the advanced programs.) I enter the distance that I want the sprint projected to and the computer calculates the projected times, and then calculates the TPRs for the projection. I do agree that the projected times from the multiplier are fast, but from my perspective, they're very useful. My experience with the projector is that its accuracy will vary anywhere from right on the money to way too fast. Once or twice out of a hundred times, the projection may be too slow. Accuracy of the projection is dependent on the quality of the horse. Knowing that the projection will more than likely be too fast is a powerful tool in the contender selection process. What does this bit of knowledge tell you about a sprinter that projects slower than the routers? I also calculate the TPRs for the sprint line using the -5 sprint to route adjustment and compare the them. If the two sets of TPR ratings are pretty close, say within 2 points, and IF the projected ratings are better than any of the route contenders, then I use the projected pace line for the DCPARS program. If the sprinter projects slower than the route contenders, it's an easy elimination. A few words of caution are necessary here -- never, never, never use an aberrant paceline for the projection. If you do, the only thing you'll get is an aberrant projection. Does this work all the time? Of course not, but it makes it easy for me to make a firm decision every time and I'm happy with the bottom line in these situations.

The route to sprint situation is handled in a similar manner. I prefer to consider only those routers that have some early speed, especially if today's race is a long sprint (6.5, 7.0, or 7.5 furlongs). I eliminate the deep closers with one exception -- the Graded router, especially a Grade I router, coming back from a layoff in an allowance sprint. The sprint times are extracted from the route and TPRs are calculated for the extracted sprint pace line. I also calculate the TPRs for the route pace line using the +5 adjustment. If the two ratings are close, I'll use the extracted sprint pace line for the DCPARS program. If the router happens to have a sprint line anywhere in its past performances, I'll also calculate the TPRs for that line also. I always look for corroborating pace lines to confirm a horse's projected performance. Just like the sprint to route multiplier, this doesn't work all of the time, but it works well enough most of the time. That's good enough for me. I just wanted to cover this type of situation for those that may be inclined to dig out their old Racing Forms to check out the races for themselves. If you see a route paceline in my printouts for a horse that shows nothing but sprints, or a 6 furlong paceline for a confirmed router, you'll know where the paceline came from. If you're uncomfortable with what I just described, and this type of situation always give you problems, you can always pass the race. It's up to you to find what works for you in these situations. Actually, some of you have probably developed your own approach that works just as well or better than this. I hope you'll tell me about it, because I'm always willing to learn something new. I've digressed enough so let's get back on track.

For those that are rule oriented, I'm going to throw in another rule here. Make sure your brain is in gear before working any races. My mind wandered a bit when I was working a race for December 14th and I ended up eliminating the winner. I forgot to enter the dirt to turf shipper adjustment that would have put the horse into the top five. This was a rather painful lesson. But, a little pain now and then is good for one's soul, isn't it? Pain makes you think; thinking makes you wise; and wisdom enables you to endure.

Using the TPR guidelines, I try to use the top 5 TPR horses, and make sure that the top 2 or 3 EPR and top 2 or 3 FFR horses are included as final contenders. Just as Dick Schmidt said, I usually end up with 3 to 6 contenders. Sometimes it's only 2 and sometimes it's as many as 7. Naturally, if there's only 2 contenders I don't do anything more with them. But, when there's 3 or more, they go into the DCPARS program. The pacelines are entered just as they are in the past performances. No agonizing adjustment decisions are required..

Copies of the printouts for all 24 races are in this manual. The pace lines that were used are printed out at the top of the page along with the EPR, FFR and TPR figures for each line. I use a 6 digit number to identify the races that I work. The first 4 digits are the month and day; the last 2 digits indicate the race (121105 = December 11, 5th race).

**NOTE:** My copy of the Deceleration Pars program is exactly the same as yours. For the purpose of this manual, the placement of the DCPARS data has been modified in order to make to type in data that does not normally appear on the DCPARS printouts. I have manually added the information under the following headings: EPR, FFR, TPR, Kexdc, DTE Rank, Differentials, Total, Rank, Result, and Mutuel.

The procedure is quite simple. Use TPRs for contender selection, then use DCPARS to sort them out. Following the example given by Dr. Sartin:

1. Enter your contenders into the DCPARS program using the Daily Racing Form times and beaten lengths.
2. Go to the Dream Race Deceleration Pars section of your DCPARS printout.
3. Calculate the difference between the Deceleration figures for each horse and the Pace pars in each of the four deceleration categories, Ep/p, He/p, Td/p and Pm/p.
4. Add the differences for each horse to obtain its Total Score, then rank them, high number is best. (Example below)

| DREAM RACE DECELERATION PARS |       |       |       |       |               |     |     |     |       |      |
|------------------------------|-------|-------|-------|-------|---------------|-----|-----|-----|-------|------|
| Name                         | Ep/p  | He/p  | Td/p  | Pm/p  |               |     |     |     |       |      |
| Pace                         | 0.940 | 0.913 | 0.858 | 0.894 | Differentials |     |     |     | Total | Rank |
| HorseA                       | 0.930 | 0.995 | 0.946 | 0.950 | -.10          | .82 | .88 | .56 | 2.16  | 2    |
| HorseB                       | 0.967 | 0.980 | 0.948 | 0.956 | .27           | .67 | .90 | .62 | 2.46  | 1    |

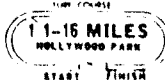

When calculating the Differentials, always subtract the Pace par figure from the horse's figure. I mentally move the decimal point one space to the right and this change is reflected in the Differentials and Totals. You don't have to do this if you don't want to. I just do it because it's easier for me to work with numbers that are like dollars and cents. It really doesn't matter as long as you're consistent in your application. In the example above, under the heading Ep/p, HorseA has a value of .930. Moving the decimal one space to the right makes it 9.30. 9.30 minus the Pace Ep/p par of 9.40 gives you an Ep/p Differential of -.10 for HorseA. Following this procedure with HorseB, you have 9.67 minus the Pace Ep/p par of 9.40 which gives you an Ep/p Differential of .27. When this has been done for every horse, in every

column, simply add up each horse's Differentials to end up with its Total score. To get HorseA's Total you add -.10, +.82, +.88, and +.56 and you arrive at a Total of 2.16. HorseB ends up with a Total of 2.42. After this is done for each horse, you just rank them in descending order. The horse with the highest total is ranked #1 and so on.

Let's work the 5th race on December 14, 1991, so you can see how easy it is to win with DCPARS. This race is 8.5 furlongs on the turf course, for fillies and mares, non-winners of 2 other than maiden, or claiming.

## 5th Hollywood

1 1/4 MILES. (Turf). (130\*) ALLOWANCE. (Stretch start). Purses \$35,000. Fillies and mares, 3-years-old and upward, which have not won \$3,000 twice other than maiden, claiming or starter. Weights, 3-year-olds, 118 lbs.; older, 121 lbs. Non-winners of two races other than claiming at a mile or over since October 1 allowed, 3 lbs. Break a race other than maiden or claiming since then, 6 lbs.

**FIFTH RACE  
Hollywood  
DECEMBER 14, 1991**

1 1/2 MILES (Turf). (1:38 1/4) ALLOWANCE. (Stretch start). Purse \$35,000. Fillies and mares, 3-years-old and upward, which have not won \$3,000 twice other than maiden, claiming or starter. Weights, 3-year-olds, 118 lbs.; older, 121 lbs. Non-winners of two races other than claiming at a mile or over since October 1 allowed, 3 lbs. Such a race other than maiden or claiming since then, 6 lbs.

Value of race \$35,000; value to winner \$19,250; second \$7,000; third \$5,250; fourth \$2,625; fifth \$875. Mutuel pool \$359,657. Exacta pool \$422,643.

OFF AT 2:35. Start good. Won driving. Time, :232, :472, 1:112, 1:3

**Rose Of Mull** -- No Form. APV = 119. The last race (dirt) TPRs are 80.1, 84.4, 164.5. Because this line is on the dirt, we'll check out her latest turf route, 3 races back (even though she shows no form). 9 furlongs on the turf -- 70.4, 103.6, 174. It's better but not good enough in here. Out.

**Just Released** -- E/P Presser. APV = 53. The last race (tandem with Local Lass) TPRs are 82.8, 99.2, 182. We'll use this paceline. Contender.

**Oh Mercy** -- Probable Presser. APV = 23. European filly, 1st U.S. start. I have found that European horses with APVs of 12 to 29 percent, do not do very well in their first start against Allowance horses in Southern California. I'm not going to worry about this one. Out.

**Nat's Lea** -- No Form. Dirt APV = 108. The last race (dirt) TPRs are 83.6, 81.9, 165.5. Out

**Local Lass** -- E/P Presser. APV = 141. The last race TPRs are 84.3, 102.2, 186.5. We'll use this paceline. Contender. (I guessed at the running style based on her European race comments, I'm assuming she got the lead by default in her last race.)

**Title Bought** -- Needs To Lead? APV = 113. Coming back after 8 week freshening. The last race (trouble line) TPRs are 89.5, 88, 177.5. I decided to go back to July 22 for the pace line. This was the second race after a 9 month layoff, at this track, on this course. The TPRs are 88.2, 92.3, 180.5. We'll use this paceline. Contender.

**Border Mate** -- S/P Presser? APV = 58. The last race TPRs are 85.5, 96, 181.5. This is our paceline. Contender.

Now all we have to do is put our 4 contenders into the DCPARS program. The full printout of this race is with all the rest so we'll just show the Dream Race Deceleration Pars section so we can go over the math calculations without having to flip pages back and forth.

#### DREAM RACE DECELERATION PARS

| Name  | Ep/p  | He/p  | Td/p  | Pm/p  |      |      |      |      | Total | Rank |
|-------|-------|-------|-------|-------|------|------|------|------|-------|------|
| Pace  | 1.009 | 0.988 | 0.996 | 1.003 |      |      |      |      |       |      |
| Borde | 0.961 | 0.979 | 0.941 | 0.951 | -.48 | -.09 | -.55 | -.52 | -1.64 | 4    |
| Title | 0.974 | 0.993 | 0.967 | 0.966 | -.35 | .05  | -.29 | -.37 | -0.96 | 3    |
| Local | 1.021 | 1.004 | 1.025 | 1.008 | .12  | .16  | .29  | .05  | .62   | 2    |
| Just  | 1.034 | 0.993 | 1.026 | 1.006 | .25  | .05  | .30  | .03  | .63   | 1    |

Remember, I mentally moved the decimal point one space to the right before performing these calculations. As I said before, this is optional. Whatever you decide to do, do it consistently and the relationships will remain constant.

**Borde** (Border Mate): (Ep/p) 9.61 minus (Pace Ep/p) 10.09 = -.48. (He/p) 9.79 minus (Pace He/p) 9.88 = -.09. (Td/p) 9.41 minus (Pace Td/p) 9.96 = -.55. (Pm/p) 9.51 minus (Pace Pm/p) 10.03 = -.52. Add the differentials, -.48 plus -.09 plus -.55 plus -.52, and we have a total of -1.64.

**Title** (Title Bought): (Ep/p) 9.74 minus (Pace Ep/p) 10.09 = -.35. (He/p) 9.93 minus (Pace He/p) 9.88 = .05. (Td/p) 9.67 minus the (Pace Td/p) 9.96 = -.29. (Pm/p) 9.66 minus (Pace Pm/p) 10.03 = -.37. Add the differentials, -.35 plus .05 plus -.29 plus -.37, and we have a total of -.96.

**Local** (Local Lass): (Ep/p) 10.21 minus (Pace Ep/p) 10.09 = .12. (He/p) 10.04 minus (Pace He/p) 9.88 = .16. (Td/p) 10.25 minus (Pace Td/p) 9.96 = .29. (Pm/p) 10.08 minus (Pace Pm/p) 10.03 = .05. Add the differentials, .12 plus .16 plus .29 plus .05, and we have a total of .62.

**Just** (Just Released): (Ep/p) 10.34 minus (Pace Ep/p) 10.09 = .25. (He/p) 9.93 minus (Pace He/p) 9.88 = .05. (Td/p) 10.26 minus (Pace Td/p) 9.96 = .30. (Pm/p) 10.06 minus (Pace Pm/p) 10.03 = .03. Add the differentials, .25 plus .05 plus .30 plus .03, and we have a total of .63.

Ranking the totals in descending order (high is best) we find that DCPARS has this race one, two, three, with the \$15.00 winner sitting on top of the 4/5 favorite.

It takes less work to actually do this than it does to write or read about it. This single section of the printout with a minimal amount of work will get you 67% winners within the top two. You owe it to yourself to experiment with DCPARS at your track. Find out which of the other sections of the printout will help you tighten up the results even further.

# FAIRGROUNDS TRAINERS TOP TWO PROFILE

Here's your chance to match your skills against the TOP 2 Fairgrounds Trainers. They enjoy "fabulous" win percentages of 19.6 and 20.5% respectively. That's a TWO TRAINER composite average of 40.1% !  
WOW!

But for all of you still believing in the myth that races are controlled by human manipulation, here's your chance to prove it.

## FAIR GROUND'S TOP TWO TRAINERS IMPORTANT CATEGORIES FOR MUTUEL PROFIT

| Category                           | Starts | Wins | Wpct. | Avg. Mutuel | \$2-ROI |
|------------------------------------|--------|------|-------|-------------|---------|

## CLIENT REPORT FORM

The vast majority of ENERGY/KGEN clients WHO KEEP FAITH with their signed contracts and continuous progress reports and follow the suggestions we send back to them, critiquing their reports, are enjoying a winning record and Return on Investment. Some of them for the first time in long years of handicapping.

It can be said, with little room for argument, that our insisting on RECORDS is as responsible for ENERGY/KGEN's success as the programs themselves. Failure to keep accurate and consistent records is an escape mechanism of losers which is comparable to the ostrich's quaint habit of hiding its head in the sand to avoid danger.

Virtually every ENERGY/KGEN client who has failed and complained whiningly, has been in breach of contract: has not sent reports with even a modicum of consistency or has insisted on wagering on a self-perceived TOP CHOICE only.

This has always been a TWO horse Methodology. This fact will become even more apparent in THOROMATION™ AND PREVIOUS PROGRAMS IS THAT THERE WILL BE no room for doubt AS TO THE top two. This statement is predicated on your properly utilizing your Stop Action Instant PREplay screens for confirmation.

It is essential that these report forms be filled out CORRECTLY as prescribed. For those who enjoy immediate success with THOROMATION™ we will relax the contractual clause demanding constant reporting and leave the decision up to you except for MONTHLY status reports. But that is AFTER you are enjoying the prescribed success rate.

Here I have filled out a report form based on the figures produced by the race between A, B, C & D.

When the winner is left out, mark with an X.

There had been a  
Handicapping Expo '92  
planned for next year.  
It was canceled. The  
reason given: More  
time to sell the  
Expo '90 TAPES.  
Profit from the tapes  
**EXCEED** profits from  
the actual seminars!

We take NO \$\$\$  
from OUR seminar tapes.  
They are sold virtually  
at cost plus expenses  
**EXCLUSIVELY** By
