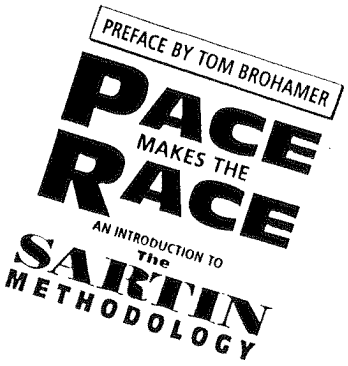
DON'T STOP HERE



If you thought the art and science of The Sartin Methodology stopped with *Pace Makes The Race* or Brohamer's MODERN PACE HANDICAPPING, think again...

Pace Makes the Race was never intended as more than a simplified version of the Methodology... and the statement "...the first, last, and only word that matters on pace in thoroughbred handicapping" from the dust jacket of *Modern Pace Handicapping,* while true in 1991, has been superseded by current reality. Ironically on that same dust jacket was this highly prophetic phrase...

"There is a revolution going on in the world of thoroughbred handicapping..."

TODAY'S SARTIN METHODOLOGY IS

TODAY'S Sartin Methodology has advanced far beyond anything revealed in these books because today's racing imposes *new* problems. Our current procedures and computer programs are designed to get the kind of **higher paying mutuels and exotics** that previous methods, our own and others, fail to isolate!

WE ARE A CLIENT-BASED, LIMITED MEMBERSHIP GROUP DEDICATED TO SERIOUS HANDICAPPERS ONLY

FOR INFORMATION CONTACT:

"What I like to see are the books and programs by fellows such as Andrew Beyer and William Quirin, the experts. And don't get me wrong, these guys *are* experts. These people serve a purpose. Whether they're teaching the correct thing, I can't say. But for my purposes, speaking purely for myself, what they teach me is very important. And that is, whatever they say, do the exact opposite. That's a very valuable piece of information as far as I'm concerned. You need that. You cannot develop a pattern of success unless you know who the losers are. Once you know who the losers are, once you discern properly the pattern they are using, if you do everything *but* what they do, you will be successful. This is basically what I've done in handicapping."

Buddy Alvarado, certified winner

as quoted by Barry Gifford in, *A Day at the Races*

SPOTTING PUBLIC CHOICES FROM PAST PERFORMANCE LINES

This is something everyone aspiring to handicapping success should be able to do ***automatically*** at least 86% of the time. By developing this skill you'll have a handle on the most likely favorites and their probable odds. Now you can look at other contenders and ascertain whether or not one or more is likely to beat the public choices.

If you have NOT yet developed the skill of reading the public mind, just make a list of the factors the public uses to make choices. The top public choice wins an average of 32.6% of the time. The top TWO favorites combined - 50% of the time. When you cannot find a horse to beat them, join them or pass the race. DON'T fight reality.

LEARN what factors determine the public fancy. When you know ***what*** the public accepts, follow Buddy Alvarado's advice...DO THE OPPOSITE!

Copyright 2008 SartinMethodology.com - Not for Resale

WHY BET 2 HORSES TO WIN?

From years of actual experience in handicapping and wagering in the company of the best known professionals in North America, the following scenario is quite typical. Most one-horse bettors wager on the BEST horse among their contenders. This leads to more wins, but lower mutuels.

33% WIN PROFICIENCY	R.O.I.
ONE horse to Win	
20 Races: Invest $40	
6.6 Wins at &7.00 = $46.20 Net = $6.20	$1.16

Betting TWO horses to Win eliminates all need for cautiously betting on the numerical best. Both low and higher odds horses can be bet with impunity.

2 horses to Win – from actual records	R.O.I.
20 Races: Invest $80	
13 Wins at $10 = $130 Net = $50	$1.63
12 Wins at $10 = $120 Net = $40	1.50
11 Wins at $10 = $100 Net = $30	1.38

I know a few professional one-horse bettors who hold out for double-digit mutuels; as high as $12. As a result they have fewer wins. The best publicized value bettor claims a 22% Win rate. It takes them far more racing days to find single wagers at 5 to 1.
Typical example:

VALUE BETTOR - One horse to Win	R.O.I.
20 Races: Invest $40	
4.4 Wins at $12 = $52.80 Net = $12.40	$1.31

Example from actual records	R.O.I.
2 horses to Win - holding out for same Value	
20 Races: Invest $80	
12 Wins at $12 = $144 Net = $64.00	$1.80

There is a popular but fallacious adage that goes: "In betting TWO horses to win you're always assured of ONE losing bet." (except in a dead-heat) What this fails to acknowledge is that if your bet only one horse to win and it loses, you're also assured of one losing bet!

Long-term records prove that wagering on two horses to win more than doubles one-horse winning percentage. Why? Because not being limited to a single choice alleviates mental pressures giving the bettor a much wider range of selectivity.

A Sartin Methodology TODAY Audio/Video Workshop

INTRODUCTION TO VIDEO - AUDIO TAPE #1

This first tape dwells on the Sartin Methodology's history and development. It goes from what experts called a REVOLUTION in handicapping through its subsequent EVOLUTION. My chief focus is on **concept**. Most "horse-*players*" ignore concept and want to go straight to a systematic set of rules designed to win the "next" race. Granted, *any* methodological or systematic procedure might produce a few winners for those who ignore concept. No procedure will do so *consistently* unless the user fully understands the concept behind it.

I've been working with aspiring handicappers for 23 years, dealing with almost 3,000 different persons and I can state unequivocally that I had to reject over 2,000 of them, refusing to let them join the Sartin group, because they denigrated the importance of concept and chose to ignore it.

This experience reminds me of an old, politically incorrect term coined by early missionaries: *Rice Christian*. This referred to those who became converts merely for the food, ignoring the concept and principles behind the religion to which they converted. Their hearts and minds remained true to previous beliefs.

Most "Horseplayers" subscribe to the maxims and rules fixed in their minds by their **earliest** instruction in the art and science of horse race handicapping. They have developed a mental set that refuses to accept the fact that much of the information they blindly accepted will cause them to lose. They are victims of Logic Tight Compartments making them immune to advanced, revolutionary FACT that could make them to cast off their losing habit patterns and WIN!

These persons, like the 2,000 I rejected, chose rice over concept.

A number of people have "importuned" some of the basic formulae of the original Sartin Methodology and are selling it without regard for concept. Their customers are less than satisfied because they don't understand the principles or philosophy behind what they purchased. As a result they apply their old, outmoded, mainstream 'rules' for all aspects of handicapping, including contender and paceline selection.

In so In so doing they end up with a smorgasbord that is highly indigestible and they suffer from a severe case of mental salmonella.

Because you ordered this tape series, I assume that you are willing to accept the fact that without a full understanding of **concept** there is no hope for consistent handicapping success. Hence, Tape #1.

In Tape #2 I will detail exact guidelines and a step by step process for WINNING with TODAY'S Sartin Methodology.

Copyright 2008 SartinMethodology.com - Not for Resale

We have not forgotten users of other advanced programs. Shane dedicated his Beaumont presentation to the proper use and optimal readout interpretation of Synergetic Match Up, Thoromation, Entropy and Quad-Rater. We offered something for everyone. In this expanded manual, I go even further in depth than we did in Beaumont. I demonstrate with numerous example races how to optimally interpret and use all the readouts in all our advanced programs. Much of what I explain has been tragically overlooked by users.

A strong secondary theme of this project is a demonstration of the power of computerized *consistency* over what most 'experts' call "handicapping". My efforts are directed toward debunking the notion that ego-directed, subjective skills based on anyone's personal insights are more likely to create consistent profits than those of you depending on computer generated handicapping analysis.

Supporting our thesis: A couple of weeks after the workshop came the celebrated chess victory of Deep Blue over international chess champ, Garry Kasparov.

The Associated Press

Chess champ Garry Kasparov is seen on a video screen pondering a move in the deciding game of his rematch against IBM's "Deep Blue" computer.

Computer dazzles

Chess champ stalks off after loss

By Marcy Soltis
The Associated Press

NEW YORK

In a dazzling, hourlong game Sunday, the Deep Blue IBM computer demolished world chess champion Garry Kasparov and won the six-game chess match between man and machine.

The final score was 3½ points for the computer and 2½ points for Kasparov. The 34-year-old Russian and the computer split the first two games, then played to draws in Games 3, 4 and 5.

Kasparov resigned after the computer's 19th move in Game 6. Visibly upset, he bolted from the table, shrugging his shoulders.

At a news conference later, he lashed out at IBM for programming the computer specifically to beat him.

"It was nothing to do about science.... It was one zeal to beat Garry Kasparov," he said. "And when a big corporation with unlimited resources would like to do so, there are many ways to achieve the result. And the result was achieved.

"I feel confident that the machine hasn't proved anything yet," Kasparov added. "It's not yet ready, in my opinion, to win a big contest."

The statement left it hard to imagine what a big contest might be after a week in which worldwide attention focused on the best human chess player and his losing duel with an overgrown PC.

"We on the IBM Deep Blue team are indeed very proud that we've played a role in this historic event," said C.J. Tan, the scientist who headed the Deep Blue effort.

"This is a match that will benefit everyone, from the students who sat in the audience learning from Garry and Deep Blue to many consumers outside of this building who will be deeply affected by this advance in technology."

"Bobby Fischer once said chess is getting to be solvable. This computer event could eventually bring the whole thing to a solution. It may eventually mean the end of the game. It's possible."

Grandmaster Ilya Gurevich

Copyright 2008 SartinMethodology.com - Not for Resale

Worldwide headlines like this should give food for thought to those renowned handicapping "experts" who have denigrated the computer's power to help us equal or better their records.

Since we first heralded the advent of computer-potential to produce profitable horse race investing, our adversaries have protested that no computerized Methodology could duplicate *their* use of information, their insights or analytical skills. I venture to say that few of these detractors have analytic handicapping skills that equal or better the ability of Kasparov to analyze chess.

We have the power to make more profit than any author-expert; but only if we comprehend and fully utilize the inherent power of both our user instructions and our readouts.

First, let's make sure we all understand the terms of our Method.

GLOSSARY OF TERMS

Terms originated by and indigenous to The SARTIN METHODOLOGY

ATM: Automatic Track to Track + Manual Adjustment.
Leaves you an option to make additional manual (self perceived) adjustments.

AUTO ADJ: An Automatic Adjustment made from times of each TRUE contender in a race (see Dream Race).

AUTO-S: Only in QUAD-RATER: A specially weighted AUTO adjustment that takes into consideration horses shipping from other tracks that are faster or slower; surface differences and daily track variants.

BEHAVIORAL PATTERN: Popularly referred to as running style as determined by genetics (breeding) and training.

BETTING LINE: An ODDS LINE that shows what a horse's odds SHOULD BE based on the viable variable of THIS Methodology. It does NOT attempt to create a mainstream evaluation of so-called TRUE ODDS. It predicts potential value based on the power of Methodology factors.

BOTTOM LINE: A non-linear WEIGHTED evaluation of each contender's WIN potential relative to all horses entered. This is NOT a linear sort and employs Fuzzy Logic. The MOST effective SORT yet devised.

CLASSIC TERMS: A thorough understanding of the importance of these terms is absolutely ESSENTIAL for success in Pace Handicapping.

COROLLARY: A factor or group of factors from a secondary program or computer readout source that confirm the readout analysis of a primary readout source.

DREAM RACE: Creates Pars from the FASTEST potential 1st, 2nd and 3rd fractions of each contender you enter in a race.

ENERGY: Incremental Velocities transformed into the percentage of horse's Total Energy used at each call.

Copyright 2008 SartinMethodology.com - Not for Resale

ENTRY SCREEN DEFINITIONS:

1st CALL: First Fraction.

2nd CALL: Half Mile in Sprint. 3/4 Mile in Route.

3rd CALL: Stretch Call.

FINAL CALL: Time at finish of race.

2nd FRACTION: The 1st Call subtracted from the Second Call & adjusted for lengths beaten or gained.

3rd Fraction: The 2nd Call subtracted from Final Time and adjusted for lengths beaten or gained.

BL1: Lengths behind at the 1st Call.

BL2: Lengths behind at the 2nd Call.

BLS: Lengths behind at the Stretch Call.

BLF: Final Beaten Lengths.

NOTE: If a horse's position call is "1" at any call, regardless of its lead, use 0.

SR: Daily Racing Form Speed Rating.

TV: Daily Racing Form Track Variant.

N or NTL: NEED TO LEAD – Thoroughly explained within the text of all advanced manuals, the terms designate at which point in a race a horse traditionally needs to take the LEAD in order to WIN or come in close.

1 = Need to lead from start to finish

2 = Need to lead from second call to finish

3 = Comes from OFF the pace to win

4 = Wins or is in-the-money with final fraction or stretch move ONLY.

E-S-P: Designating a horse's TYPICAL running style when in form as indicated by its ENERGY yield as well as by its customary position in races. E = Early. P = Presser. S = Sustained. Sub-variations are: EP = Early Presser; SP=Sustained Presser. One move final fraction horses are called: L = Late. These designations appear as computed on the readouts of ALL advanced Methodology programs.

MATCH-UP: (Pace Match-Up) A technique for measuring each True Contender's fractions that add up to Final Time, against the fractions of the competitors in the same race. The inter-reaction of each horse to the others in a race based on running styles that can alter the patterns and fractional times that run by a horse's in previous efforts.

PACE GRAPH: In Pace Launcher and post Pace Launcher programs. Shows projected Pace of Race by call and how each contender will run against that pace.

PACELINE: Formerly called Running Line. The incremental PACE & Final Times as published in the Daily Racing Form or from a viable downloading source.

PACE OF HORSE (P.O.H.): The performance of a horse AGAINST the pace it ran, applying lengths beaten and gained. Ideally this compilation is done by individual FRACTIONS, not calls.

PACE OF RACE (P.O.R.): The 3 fractional times or Energy Expenditure of the P.O.R. horses in the lead at each call. As many as FOUR can qualify. Leading at 1st Call, 2nd Call, Stretch Call, Finish. These are the times that appear in the Racing Form with no consideration for lengths beaten or gained. Only a horse going wire-to-wire will run the CALL P.O.R. Ideally, P.O.R. AND P.O.H. should be figured by 1st fraction and the GAPS between 1st and 2nd Call (2nd Fraction) and between 2nd Call and Final Time, (3rd Fraction). Not even the CALL P.O.R. horse will necessarily own the fractional Pace of Race.

PARADIGM: A more refined WEIGHTED version of PARAGON.

PARAGONS: Depicts the relative power of the THREE BEST horses, Early, Median and Late.

SORT: A Linear Ranking of contenders by category with a (LINE SCORE) summary averaging all factors. ALL rankings are ONE apart and LOW is best.

Copyright 2008 SartinMethodology.com - Not for Resale

TANDEM: A race in which two or more contenders came out of the same race. Fully explained in The Tandem Manual.

TRUE CONTENDER: An entrant in a race that actually has a chance to win or be in the money against today's competition.

TRUE SPEED: The F-P-S and/or Energy Value of Final Time.

VECTOR (Graph): A display of positive or negative MOVES made by contenders in each segment of a race RELATIVE to the pace of race.

NOTE: Many of the following terms have been adopted by a number of other authors, but their published formulae is no longer compatible with the actual permutations used in the Sartin Methodology. We now employ the new era mathematics of CHAOS PHYSICS. This new procedure has given these now popularly mimicked terms a heightened potency that produces results far superior to the old. However, here are the basic elements of their formulae:

AUTO #1 ADJ: Fractional and final time adjusted by the DREAM RACE Energy/Velocity of the contenders in a given race. Creating a par adjustment based on the actual times each contender will face in the current race.

BOTH/AND: CHAOS formula, employing FRACTALS, that divides each race in equal halves and registers the percentage of energy expended by a contender in the first and second half of a race.

CPR: Composite Pace Rating. Seen only in the Pace Launcher series. Comparable to SUSTAINED PACE in other programs.

DC: Short for Deceleration.

DV: symbolizing the weighted average of Deceleration and Velocity by segments –

Ep/dv = Early Pace DV
P/dv = Presser DV
He/dv = Hidden Energy DV
TD/dv = Total Deceleration, start plus finish averaged with the deceleration for same segments
PM/dv = Pace Median DV, the Velocity/Deceleration ratio of fractions 1 & 2

EARLY-LATE DIFF: The WEIGHTED difference between a horse's energy at the 2nd Call and 3rd Fraction.
+ = More weighted energy at the 2nd Call. - = More weighted energy Late.

E/EP: Early Energy Potential.
Isolates horse by degree of early potential from lines that show little evidence of early pace.

ENTROPY: Energy no longer available.
Deceleration as measured by degree of energy loss from various points in a race.

EPR and/or EP: Early Pace Rating and computerized Early Pace.

EX: Short for Energy Expenditure.

FX: FACTOR X. The weighted composite of 1st and 3rd fraction velocity or energy expenditure.

FW: FACTOR W. The balance between Early and Late Energy-Velocity yield. Different formula for Sprint and Route. Is particularly effective when a horse runs a balanced race.

Copyright 2008 SartinMethodology.com - Not for Resale

HIDDEN ENERGY: The newly WEIGHTED average of a contender's 2nd and Final Fractions.

KINETIC (Energy): Measures the amount of Energy available by segment, as measured by degree of Entropy.

L/EP: Late Energy Potential.
Isolates horses by degree of late energy potential from lines evidencing little tendency toward late energy.

LEX: A WEIGHTED formula for late energy expenditure RELATIVE to a horse's potential total energy.

LPR: Late Pace Rating.

MEDIAN ENERGY: The percentage of a horse's total energy expended at the 2nd Call.

SP: Sustained Pace. The WEIGHTED value of a horse's Velocity and/or Energy, 2nd Call plus 3rd Fraction AVERAGED.

TOTAL ENERGY: The newly WEIGHTED sum of the feet-per-second value of a horse's incremental fractions as adjusted by lengths beaten or gained.

TT – Turn Time (Hidden 2nd): The fractional GAP between 1st and 2nd Call: the second quarter in a sprint or the GAP between the half mile and the three quarter mile time in a route.

3rd: Percentage of a horse's Total Energy/Velocity still available in the final fraction.

WARNING: many of these terms have been importuned by and incorporated into Mainstream Handicapping procedures. In ALL cases they have warped or completely contaminated their meaning. BE SURE you understand OUR definitions or you might be sadly misled.

I'll begin by isolating the last two entries of our Glossary:

E/EP: Early Energy Potential.
Isolates horse by degree of early potential from lines that show little evidence of early pace.

L/EP: Late Energy Potential.
Isolates horses by degree of late energy potential from lines evidencing little tendency toward late energy.

Read the definitions carefully. In 1996 I began stressing the fact that the formula for these readouts was superior to any previous way to evaluate Early and Late Energy Exertion. I received letters from some doubters saying that Percent Median Energy was just as good as E/ep and that Lex or 3rd fraction duplicated L/ep. After losing a few races clinging to this misconception, they discovered their error and accepted the superior predictive powers of E/ep and L/ep.

Some clients handicapped the 1997 Kentucky Derby with Sustained Pace as the only barometer. When that readout did not perform as well in the '97 Derby as it had in the past, they were distraught. There was ample warning about this year's Match Up in the past performance lines themselves as well as in much of the pre-race newspaper analysis. The consensus, as confirmed by the past performance charts, was that this year there was no DEDICATED (early) Speed in the race.

Here is one missive from our E-Mail.

Subject: SUSTAINED HORE
Date: Sat, 03 Mav 1997 18:18:07 -0700

Subject: PL4
Date: Sun, 04 May 1997 21:19:48 -0700
From: Brick <brick@,
To: Shane Sartin <shane@discover.net>

Derby: seemed like an easy one this year as PL3 BL/BL had the winner 2nd and both the exacta and trifecta in the top three.

Copyright 2008 SartinMethodology.com - Not for Resale

I've written innumerable pages and lectured for hours on the subject of BOTH/AND in reference to Early-Late. I've even evoked the Chinese I Ching and the concept of Yin/Yang. Apparently to little avail. Many people still think a race can be dissected by a linear definition of Early or Late. Leave that to the mainstreamers and join the Quantum Revolution. SILVER had the 2nd BEST Late Energy Potential, 3rd best LPR. It also had the TOP Early Energy Potential. CAPTAIN was only 3rd high L/ep but was 6th E/ep. Mainstream logic proclaimed it the entrant with the BEST late potential. Once again we see the fallacy of strictly VISUAL perception. Because FREE came from a line where it beat SILVER, It had, as do so many Show horses, slightly better readouts.

Although we use the same PRE-Derby lines for Derby horses in the Preakness, these figures relate to THIS match up. Please don't gauge their future prospects by these rankings when the match up changes. Horse CANNOT be judged by static ratings. Evaluate them relative to the match up of contenders and Energy demands by track and distance.

There will always be those who persist in defining early-late by subjective visual perception or linear mathematics. The object of this Method is to TAKE their track investments, not GIVE them ours.

It is somewhat discouraging to offer discoveries that produce NEW readouts that are MORE predictive than older ones and have my admonitions ignored. I hope the L/ep rankings for the Kentucky Derby will be a lasting lesson.

Best of Last Three – Defined

Most clients have been able to properly discern which line in a horse's past performances constitutes BEST of last three, or four, when one of the last three is not at a distance or surface COMPARABLE to today's race. Others have been confused and out of that confusion used a non- predictive line. The client who protested against the use of LIL A.J. as a contender because he thought it ranked 8th in a field of eight had a parallel problem.

FIRST, a little exercise that I've discussed in past Follow Ups:

QUESTION: Which of the two marked lines is "BEST" for NOSHO? The "correct" line earns you a $50.80 WIN mutuel along with a $29.80 Place and $11.60 Show. Any of the three would be a bonanza payoff:

2 - Nosho (E 7)
Own: Nicolas Pierre I
Power#: 71.42
14 Days Since Last Race
Blanc B (220 16 12 29 .07)

Dkbbr. h. 6 (May)
Sire: Felstaff (Lyphard)
Dam: Onasho (Nashagio)
Br: Red; White & Blue Stables (CA)
Tr: Chew Matthew (14 1 2 3 .07)

$10,000 L 116

1997	3	0	1	0	$2,000	Turf	0	0	0	0	$0

Copyright 2008 SartinMethodology.com - Not for Resale

In its last race NOSHO had a speed rating of 88 with a DV of 13. Raw total = 101. The horse was beaten 5.25 lengths in the race. This fact alone might lead some who are still contaminated by mainstream "rules" to avoid the line. The SR in its 2nd race back was 83, DV 18. Raw total ALSO 101. But the horse was beaten by only a head. Many still believe that beaten by only a head makes the line more indicative of the horse's ability to go an extra half furlong than beaten 5.25 lengths. NO correlation whatsoever. The opposite is more often true. The 2nd line back also had the HIGHER Beyer figure, 84. Last line 81. (Another good reason to use its last line). Still, many clients remain reluctant to shed old paradigms and feel THIS is the line to use. So we have a true textbook example of what I'm trying to clarify.

If there was ever a perfect conundrum for indecision, this is it. Needless to say, the majority of "handicappers" would prefer the 2nd line back because the horse almost won the race. However, to those who have properly digested past Follow Up material, there is no problem after viewing the horse's NET SR+V.

Here is how you determine NET. No need to do it by hand. The computer makes these adjustments automatically. This is the formula:

Daily Variants of 16, 17 or 18 produce NO Variant adjustment. All Variants <u>over</u> 18 earn a positive adjustment of one half the amount of overage; under 16, a HALF point of penalty. Hence, the ADJUSTED ratings for the two lines are:

LAST LINE 88 minus -3 divided by 2 = 86.5. 2nd BACK 83 plus 0 = 83.0 (18DV = 0)

Quite obviously the horse should be taken from its LAST line because it is BEST by <u>our</u> standard. There will be those who protest this decision because they're still saddled by outmoded rules about lengths behind, especially at the finish. Those so encumbered should enter BOTH lines and go with the one producing the higher rating.

That statement will also elicit protest by persons representing the conservative contingent feeling that it's safer to go with the LEAST, based on their perception that BEST is always too good to be true. On an airline flight I'd want one of *them* to be the pilot. However, a protracted study of pacelines that produce OVERLAYS shows that accepting the BEST is far more profitable when on the ground at a racetrack or off-site wagering center.

Those who think they've mastered my "You Call The Race" exercise or the Bradshaw Match Up may point to the 44:4 - 109:1 internal fractions posted by EAGLE'S DEED at 7 furlongs on the 8th of January, 1997 and think that <u>no</u> contender in this race is a "Match."

EAGLE'S DEED 2nd back: SR = 90 DV = 9. 90 minus -3.5 = NET 86.5. Identical to NOSHO. In their comparative Match Up adjusted to *today's* 6.5 furlong distance, NOSHO runs a 31.0 final fraction. EAGLE, a 31:3. The Match Up does <u>not</u> end at the 2nd call.

Let's do the race and see how it unfolds:

Copyright 2008 SartinMethodology.com - Not for Resale

SA - 04/04/97 - Race 1

6 1/2 Furlongs 1:14:00 CLAIMING. Purse $11,000. 4-year-olds and upward bred in California. Weight; 121 lbs. Non-winners of two races since January 15; allowed 3 lbs. Of a race since February 15; 5 lbs. Claiming price $10,000. [Maiden or races when entered for $8,500 or less not considered.]

7 KAVAL	0.0	20-1	6 NOSHO 2.0	15-1
7 NOSHO	0.0	20-1	7 KAVAL 0.0	20-1

The numbers tell the story. But perhaps more interesting than just numbers is the EARLY/ LATE DIFF and BOTH/AND graphs:

Late/Early Difference Graph -- ATM SAX 4-4-97 1 6.5 D

# NAME	LN	M	DIFF	LATE	EARLY	TOTAL R
1 VINEC	1		13.0			167.75- 7
2 NOSHO	1		9.4			170.55- 2
3 NOSHO	2		9.8			168.18- 5
4 HALLO	3		7.0			169.75- 3
5 KAVAL	2		8.6			164.74- 8
6 EAGLE	2		10.2			169.52- 4
7 SILVE	2		8.9			171.47- 1
8 PRINC	1		-13.5			168.05- 6

Early-Sustained BOTH/AND Difference Graphic -- ATM SAX 4-4-97 1 6.5 D

# NAME	L	M	%EARLY	%SUST
1 VINEC	1		57.5	42.5
2 NOSHO	1		55.2	44.8
3 NOSHO	2		55.1	44.9
4 HALLO	3		53.9	46.1
5 KAVAL	2		55.3	44.7

7 SILVE	2		55.0	45.0
8 PRINC	1		42.4	57.6

Copyright 2008 SartinMethodology.com - Not for Resale

Important Observations:

Both of NOSHO's lines have almost identical E/L DIFF: 9.0 - 9.4. Its BOTH/AND Early percentages are even closer; 55.2 - 55.1%. These consistency factors bolster the decision to use the horse's BEST of last three. They also fit the SA 6.5 furlong profile current at the time. Based on parameters, so do several other contenders, notably the place horse KAVA, 55.3 and the show horse, HALLOW, 53.9. EAGLE the perceived and actual pacesetter, 55.7. Its only E/L disparity was in its 10.2 E/L Difference, not enough to be important. More meaningful are the ADJUSTED Total Energy numbers: SILVER, the favorite, was 1st with 171.47. Eagle 169.52 The winner, NOSHO was 2nd high with 170.55.

There are those in our group who still want to penalize horses coming from northern to southern California tracks. This is bottom of the barrel 10K claiming race, a level at which performance alone dictates choice.

According to those "expert" in the class level distinctions between the two geographies, horses can ship equally at levels between $10K and a high of $32K, with $24K being absolutely even. Experience says NOT to penalize except in the truly higher quality Allowance, and above, races.

Whenever Shane or I do a race that pays off like this one, we first ask ourselves why the public allowed it. In the case of this race it had to be their perception of the relative class levels of Bay Meadows and SA. They made SILVER the favorite because it had the HIGH Beyer number, last three races. Every horse except for PRINCE OF DARKNESS had a Beyer number in its last three HIGHER than NOSHO. Result: win odds of 24.4 to one. Please, even if you didn't bet a winning longshot, *always* review the race and ask yourself WHY the public let it go off at high odds. I've stressed this 'til I'm blue in the face, but it's a key way to get those longshots yourself.

Follow Up #62 CLIENT EXERCISE RACE. Let's do it 'til we get it right...

We focus for the 3rd time on this race since a number of clients failed to duplicate our results. Reason #1: Incorrect 3 year best times. #2: Different contender-paceline appraisal. #3: The error made by the client who questioned using LIL A.J. as a contender because he said in a field of 8 it ranked 8th. He just failed to absorb virtually everything I've offered as contender-paceline selection guidelines in the past three years.

SA - 02/16/97 - Race 5

6 1/2 Furlongs 1:14:00 CLAIMING. Purse $33;000 [plus up to $6;600 to Cal-bred winners from the Cal-bred owners incentive fund; administered by the CTBA]. 4-year-olds. Weight; 120 lbs. Non-winners of two races since November 15; allowed 3 lbs. Of a race since December 15; 5 lbs. Claiming price $32;000; for each $2;000 to $28;000; allowed 1 lb. [Maiden or races when entered for $25;000 or less not considered.]

Let's examine all the contenders for best of last 3 NET SR+V.

NAME:	NET	RANK#
HOME - 1 back 86+17. 17 = 0,	= 86.0	
2 back 91+09 (minus 3.5)	= 86.5	#2
TOP 1 back 82+12 (minus 2)	= 80.0	out
2 back 81+17 (no adj.)	= 81.0	out
3 back* 89+12 @ 7.5 f (-2)	= 87.0	#1 (tie)

*NOTE: SR's at 7.5 are *not* comparable to 6 & 6.5 furlong.

SERG Hastings Park - Adjusted OUT

PIRATE 1 back 87+17 (no adj.)	= 87.0	#1 (tie)

ZIKA Best is a net 83.5 - OUT

WESTO (Favorite)		
1 back 86+15 (minus .5)	= 85.5	#4
3 back Same		

DUBIOUS	
1 back 83+11 (minus 2.5)	= 80.5
2 back 87+03 (minus 6.5)	= 80.6

YANKEE		
2 back 86+18 (0 adj)	= 86.0	#3
3 back 84+15 (.5 adj)	= 83.5	

LIL AJ		
2 back 90+10 (-3 adj)	= 87.0	#1 (tie)

RESULT (discounting TOP's 7.5 furlong race)
#1 (tie) AJ = WIN #1 (tie) PIRATE = PLACE. #2 HOME = SHOW.

I've discussed many times our Zero Adjust for DV's of 16,17,18. It was also a feature of our book *Pace Makes The Race*. Using half a point instead of a full point makes no difference other than keeping the net numbers more reasonable.

Anyone suggesting that LIL A.J. ranked 8th in this field simply failed to digest the material in the Follow Up. This fact was further demonstrated by use of what he called Barrios Numbers. The formula for those numbers came to me in a letter in which a client claimed that the sum total of the 2 BEST in the last 5 BRIS numbers produced a majority of true contenders. The letter took up just over half a page in the Follow Up. I noted at the bottom of the missive that the formula was not documented by me and should be tested for validity by users. Now compare this less-than-full-page letter in Follow Up 56 with the over 250 pages written during that same period documenting the <u>most proficient</u> way to select contenders and pacelines. 1/250 = .004%. Why would anyone choose a procedure that represented such a minute percentage of the total?

Because adding together the best two of the last five numbers is easy and takes absolutely <u>no thought</u>! No thought = No profit.

I can only take people so far on the information/inspiration highway headed toward winning. When people decide to jump the bus and hitch a ride in a sleeker, faster moving vehicle headed for disaster, there is very little I can do to stop them.

Just for review: In a statistical analysis of various speed type ratings, Best of Last Three Races, the DRF SR ranked FIRST by a wide margin. Henry Kuck Ratings were 2nd. Beyer and BRIS numbers were in a virtual tie for third.

VALUABLE LESSONS THAT SOME USERS FAIL TO LEARN

PACE of the RACE / PACE of the HORSE – Quad-Rater's essential purpose was to capitalize on racing's foremost truism, one unchallenged by time: **<u>ALL WINNERS either set or overcome the pace of their race.</u>**

It was Ray Taulbot's basic premise. It was enunciated most concisely by Tom Ainslie as far back as 1968 in his *Complete Guide*:

> **PACE.** After the best horse wins a truly run race, the accomplishment can be described in one of two ways:
>
> 1. The winner set an early pace beyond the powers of its opponents, reserving enough energy to maintain its lead to the finish, or
>
> 2. The winner overcame the early pace of another horse or horses and reached the front in time.

Copyright 2008 SartinMethodology.com - Not for Resale

Those words define PACE in a nutshell and they also include the essence of ESP and the Match-Up. Ainslie's genius for using a paucity of words to describe a plethora of information should go down in history with "I came, I saw, I conquered," "Saw Sub, Sank Same," and "Nuts."

Ainslie had no sophisticated numerical formulae that could precisely delineate horses that best fit his 2 definitions. Back then only the eastern edition of the Daily Racing Form carried fractional times and beaten lengths and handicapping arithmetic was quite crude before the dawn of the computer age.

Even if Ainslie had chosen to provide the math, the formulae would be too complex and take too long to work by hand. *Complexity* and *Work* were to handicappers then, as now, anathema. Never has any endeavor offered so much potential profit to those who refuse to work for it as handicapping.

EXERCISE: Here is the 2nd race at Santa Anita April 9, 1987. The overwhelming favorite is QUEEN GEN at less than even odds (.80-1). When we see these kind of favorites, the odds on the other contenders are usually higher than normal. This race has a field of only 6 horses. As so often happens, short fields produce long profits. Why is this? First, the experts say that short fields produce short prices and second, because each horse has a potentially clear trip to the wire with a greater choice of lanes and no crowded field to impede its TRUE running ability. If one had the patience, becoming a "Small Field Specialist" would produce a good profit.

Viewing QUEEN's 6 furlong pacelines we see a dedicated Need to Lead, Early Pace horse. When we make this observation our FIRST question should be: CAN THIS HORSE GO WIRE TO WIRE against today's match up? If we fail to ask that question about Need To Lead horses in EVERY race, we invite a lot of losses.

Quad-Rater offers TWO READOUTS with immediate answers.

CHOAS FORMULA POWER AND LONGSHOT RATINGS COMPOSITE

Answer (1): QUEEN had the best (#1) Pace of Horse, BUT against WHAT Pace of Race? Answer: only the 4th best in a six horse field. THIS should cause some trepidation about accepting the horse's TOP Chaos Power Formula Rating and its number one AODDS Power Rating.

Answer (2): To confirm our suspicions let's look at THIS readout:

NAME	L		F 1	F 2	F 3	S C	SC/BL	POR	R
QUEEN	2	POR	60.55	57.89	52.38	59.22		153.59-	4
6.0 D		POH	60.55	57.89	52.38	59.22	0.00x		
		PCT	100.00	100.00	100.00	100.00	W/W		
MCKIN	1	POR	61.68	57.39	54.10	59.54		157.83-	(1)
6.0 D		POH	59.81	57.74	54.47	58.78	8.00x		
		PCT	96.97	100.61	100.68	98.72			
PELLI	2	POR	61.68	56.90	52.66	59.29		154.33-	(2)
5.5 D		POH	60.33	56.59	54.04	58.46	9.00x		
		PCT	97.80	99.47	102.63	98.60			

Both PELLI and MCKI ran against *faster* first fractions than QUEEN who ran even and had a faster second fraction (Turn Time). PELLI did <u>not</u> overcome the 2nd fraction pace of its race. MCKI did (57.74 against a pace of 57.39). Both PELLI and MCKI ran against a *faster* 2nd Call. Now, watch QUEEN run out of gas in its 3rd fraction: QUEEN is 52.38 f-p-s, PELLI, 54.04. MCKI 54.47. Both of the latter ran final fractions that <u>exceeded</u> the pace of the race in which they ran. As a result they rank 1-2 on Long Shot potential.

Don't get the idea that these observations will eliminate the need-to-lead horse 100% of the time. Various factors may come into play that make it possible for such horses to win. However, the analysis I applied to QUEEN's ability to go wire-to-wire has been proven accurate about 78% of the time over the past 21 years. There will also be those occasions when some horse <u>other</u> than a MCKI or PELLI will best the field, but QUEEN type horses historically do not fare well in this kind of match up.

The above scenario also tends to diminish the idea that has somehow become part of mainstream thinking regarding Turn Time being "Ability Time." As demonstrated by QUEEN, it's not. Turn Time is most relative when a contender carries a 2nd fraction MOVE through 3rd fraction.

I add this reminder: <u>NOTHING works 100% of the time in racing!</u>

Those thinking there is a 100% solution, and who become discouraged when some dynamic fizzles, should take up golf. If we're mature enough to accept the facts about Santa and the Easter Bunny, we must also learn to accept the fact that in an stochastic endeavor a positivity rate of 66.6% FAR exceeds normal expectation.

Here are the rest of the Quad-Rater readouts for this race.

There will always be those who will protest the use of TINY, who hasn't raced in 235 days, and MCKI, off for 188 days. In so doing they miss the entire purpose of this exercise. They're seeing trees, NOT the forest. Our focus is on *interpreting readouts*, not eliminating contenders because of some archaic "rule". Concentrate on the *principle* behind the exercise.

In any case we took both MCKI and TINY off their last line before their layoff. To satisfy the skeptical, I also show TINY off its best line, 3 races back (TINY - B = Best).

Here, from Pace Launcher:

I couldn't get WOOD, the show horse, using reason or insight. But AUTO-S gets it first. Take a page out of Trifecta specialist Carroll Pfrommer's book: He says to look at *both* adjustments when profiling the differences between winners and in-the-money horses. This applies to all our advanced programs. There was no Trifecta in this race, but had there been, Carroll Pfrommer would have won it by applying his insights in utilizing his readouts.

I was literally amazed at the number of clients who had Quad-Rater who said they couldn't make any sense out of the readouts. The Pace of Race/Pace of Horse concept is the very essence of successful handicapping. Oddly enough the only author-experts who ever explicitly exposed this fact were Taulbot, Ainslie, Mahl and myself. Two of the former are dead. Ainslie is strong but pushing 80 and some mornings I don't feel so well myself. Some of you have failed to fully appreciate the vital importance of the POR-POH relationship even though it is the first building block of the Match Up.

It never ceases to amaze me that some people, loudly proclaiming a great desire to WIN, will not make an effort to study the basic concepts essential for winning. What the heck. That's what caused me to develop Pace Launcher which embodies CONCEPT but doesn't require the user to understand it.

Entropy

Some of the response to Entropy should have prepared me for the subsequent failure of a minority of users to understand Quad-Rater. Entropy was our first program to fully embrace non-linear algorithms and use the math derived from the new physics of Chaos.

Entropy means 'Energy No Longer Available'. In a horse race this translates to DECELERATION. Horses exhibiting high velocity with minimal deceleration within the distance structure of that velocity, win virtually every race. Yet, oddly enough, before Entropy no author-expert had included Deceleration in the handicapping equation. Huey Mahl used the term but offered no way of measuring it beyond a graph showing a Linear Fractional Velocity decline. It was a good start but it cried out for expanded research and development. All other handicapping experts clung to a law in conventional physics that says for "every unit of acceleration (velocity) there is an equal unit of deceleration." Thus eliminating the need for a deceleration formula. What these experts failed to realize is that that quote relates to INFINITY, not to any specific distance. In the relatively short distances at which races are run, ACCELERATION and DECELERATION are by no means equalized. Hence, the ability to measure **Deceleration** becomes every bit as important as Velocity and all speed figures derived therefrom.

Proving this was a challenge. I had more fun developing the Entropy formulae than any other except during my collaboration with "The Hat" on Thoromation.

Previous efforts based on velocity alone were effective but did not produce winners as often as they might because they had no formula that *specifically* measured deceleration.

Thoromation, KGEN and Synergetic Match Up embodied some of my earlier concerns about deceleration but Entropy was the culmination. Those who truly followed user instructions and included in their final analysis contenders with the #1 Ep/dv and/or #1 P/dv regardless of their TOTAL, fared very well, profiting on many big overlays. The program requires little effort. Its readouts can be synthesized down to ONE.

Chief deterrents to universal success with the program was its name: Entropy (even Ph.D James Quinn asked me what it meant). Other terms also caused brows to furrow. Ep/dv, P/dv, He/dv, Td/dv and Pm/dv. The only real *new* factor was DV which stands for a synthesis of (D)eceleration and (V)elocity. EP (Early Pace) P (presser) HE (Hidden Energy) TD (Total Deceleration) and PM (Percent Median) are all staple Methodology terms and are defined in the Glossary.

Nonetheless, for many, the language barrier was too great for universal acceptance of the power of Entropy. The same held true for our later experimentation with Fractals. Rather than fight prejudicial PREcepts, I included the algorithms of both Entropy and Fractals in Pace Launcher without identifying them. The tremendous acceptance and successful use of Pace Launcher by those who were previously confused, is proof of what our mamas used to tell us: "You're better off NOT knowing." AND our attitude toward Mom when we erred: "What you DON'T know won't hurt you."

"Horseplayers" seem unduly obsessed with knowing the formula for each readout. An attitude commonly expressed is: "If I can't have the formula, I won't use the program!" The problem here is, once they *think* they understand the formulae, as per Tom Brohamer's *Modern Pace Handicapping*, our *Pace Makes The Race* and those featured in some of James Quinn's books, they abuse and alter them rendering them virtually useless. Except, that is, for the growing list of pirates. They just steal and sell them.

ENTROPY READOUTS

DREAM RACE Defined: The 1st, 2nd, 3rd FRACTIONS and 2nd CALL run by the FASTEST contender in each category entered in today's race

FOUR HORSE EXAMPLE

NAME	F-1	F-2	F-3	2C	
AAA	21:3*	23:1	26:0	44:4	AAA = Dream, Race 1st Frac.
BBB	22:0	23:0	24:4	45:0	
CCC	22:2	23:1	24:1*	45:3	CCC = Dream Race 3rd Frac.
DDD	21:4	22:4*	25:0	44:3*	DDD = Dream Race 2nd Frac.

EXCEPT for the Energy Generator, this first set of readouts is only for those who enjoy analyzing numbers. Comprehension is not necessary for winning.

(1) The Essential Energy Generator that, by now, should need NO explanation (see Glossary for reference on ALL terms).

(2) RAW Total Energy, Median Energy and PAR MEDIAN. Neither High nor Low is necessarily best. The numbers are based on the user's experience records. Since almost no user ever kept a record of this feature, the readout became meaningless.

(3) DREAM RACE ADJUSTED Total Energy, Median Energy and each horse's percentile relationship to Dream Race Total Energy. Useful to the degree that the Win and Place horses, MCKI and PELLI, both have a higher percentage than the favorite, QUEEN.

(4) A simple Energy Match Up by 1st, 2nd and final call.

(5) DECELERATION ratio to Dream Race ONLY. NO consideration for Velocity. High represents LEAST DECELERATION between calls. But it often also indicates low velocity. QUEEN goes along fairly well until the final TD/dv. Its low (86.51) indicates a lot of TOTAL DECELERATION. The winner MCKI has 91.06, the Place horse, PELLI 89.58. The also-rans have higher figures because they displayed LESS velocity to decelerate FROM. WOOD, the show horse, had the highest figure.

(6) Each contender's percentile relationship to Dream Race Velocity. QUEEN dominates the 1st fraction, MARF is 2nd. The winner, MCKI 3rd. MC: Median Call (Linear 2nd call) ranks Queen first, TINY 2nd, MCKI 3rd and PELLI 4th.

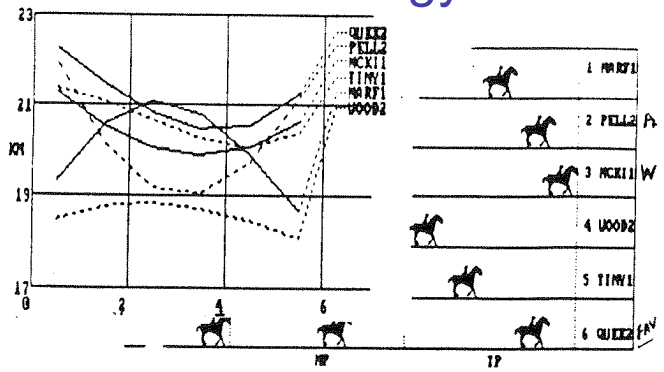
(7) Dream Race Velocity Pars is the same as (6) but isolates more race segments.

(8) This is meaningful because it offers NUMERICAL ratios from which the FINAL Rankings (9) are derived.

(9) Final Rankings (low is BEST).

WINNER #1 PLACE HORSE #2 FAVORITE #3. A common accomplishment by the Entropy Program when instructions were followed. Not bad for a concept that James Quinn said the audience would walk out on if I mentioned it at EXPO '93.

Copyright 2008 SartinMethodology.com - Not for Resale



Thoromation (EXDC) With KGEN (Kinetic Generator)

Use of Thoromation required a contract. Before signing, each user stated that he/she was well versed in all Methodology concepts and could narrow a race down to five viable contenders. We licensed the program on that basis. It turned out that many who contracted for it had overstated their comprehension and skills. They could not narrow a race down to five viable contenders and the program's concept was way over many heads. Consequently we were repeatedly barraged with questions about readout interpretation and *which* adjustment to use and *when*. Thus, a program that might well have been our final and crowning effort was being used optimally by only about half its users.

Oddly enough, nobody wanted to give it up for something they could understand. The appeal of those animated horses running across the computer monitor was just too great. I learned a great deal from the reaction to Thoromation. I discovered that many clients had delusions of grandeur and, despite giving lip service to revolutionary ideas, were entrenched in mainstream dogma. I catalogued hundreds of user questions and began working on new formulae that would answer those questions automatically.

Entropy, Quad Rater, Fractals and Pace Launcher evolved as the result.

Jim "The Hat" and I later revised and augmented Thoromation (2A) to include an adjustment that tempered the dichotomy of the (1) or (2) Adjust. The capacity for the user to do this with the (3) Adjust was always there but few utilized it. We also included Raw Phase I (MPR-LPR-CPR) for easy contender selection and a simplified Entropy screen. An ODDS LINE was included but it was based on true math, the kind used by mainstream odds line makers. It turned out to be less than optimal and was overly modified by adjustment selection so, like most things based on classical mathematics, it is not very useful.

Except for Thoromation's animated horse screen, the addition of KGEN, Entropy, Raw Phase I and a few more graphics, Synergetic Match Up offers a less expensive version of Thoromation's basic readouts.

Copyright 2008 SartinMethodology.com - Not for Resale

Thoromation II
Synergetic Match Up II

Here are the 3 ADJUSTMENT options for Thoromation-based programs:

```
SELECT TYPE OF ADJUSTMENT

1) AUTOMATIC ADJUST ALL HORSES
2) ALTERNATE ADJUST ALL HORSES
3) MANUAL ADJUST ALL HORSES    1 ?
```

(1) Automatic: Adjusts each horse to the DREAM RACE with a minimal alteration of TOTAL ENERGY, from which other Energy figures are derived. RAW = NO Adjust. Adjusted = The above minimal adjust.

(2) EQUALIZES Total Energy. This adheres to the old horseplayer fantasy in which every horse runs at the same point in time, at the same distance, same track, same conditions. An Ideal situation that is meaningful ONLY when all horses are of EQUAL ABILITY. The Program will DEFER to an instruction for using the 2 adjust when Total Energy differentials exceed 1.86.

(3) Manual (USER) adjustment or EQUA-JUST which synthesizes the difference between the (1) and (2) Adjust.

To source the optimal readouts in Thoromation and/or Synergetic Match Up, the user needs some basic skill in recognizing non-contenders and situations where an apparent TOTAL ENERGY deficiency could be explained: Shippers, off-tracks and winter tracks, producing irregular surface variants, distance changes and tracks where horses don't maintain top form for more than one race are prime reasons for using the (2) Adjust. Ironically the (2) Adjust historically produces MORE long priced winners than the (1) – just not as often.

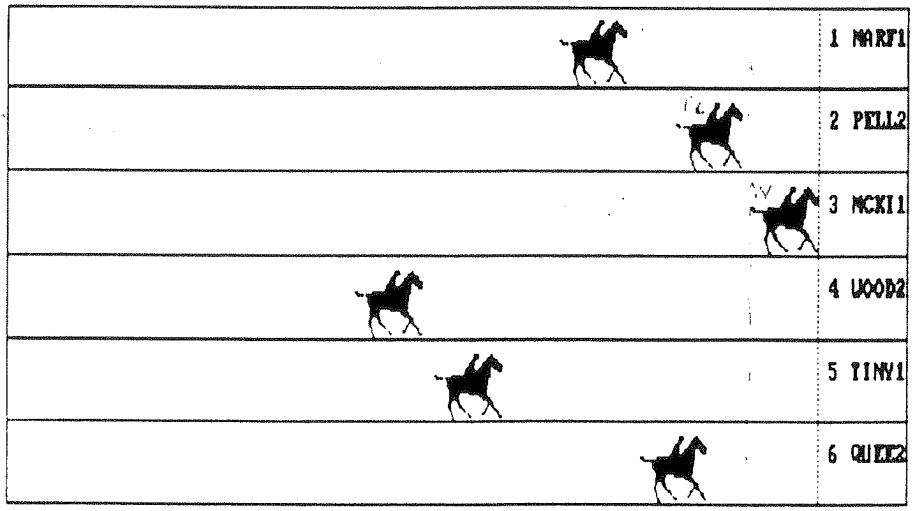
TINY1	92.8	74.2	167.0	55.54	+18.50
QUEE2	97.0	85.0	182.0	53.30	+12.00

These are RAW Phase I Readouts. MPR = Median Pace Rating. LPR = Late Pace Rating. CPR = Composite Pace Ratings. %E = Percent Early. DIFF = The difference between MPR and LPR. A minus (-) when MPR is less, a plus (+) when LPR is less (the plus/minus definition is reversed in some other programs). %Early and DIFF are excellent tools for a Model-Profile.

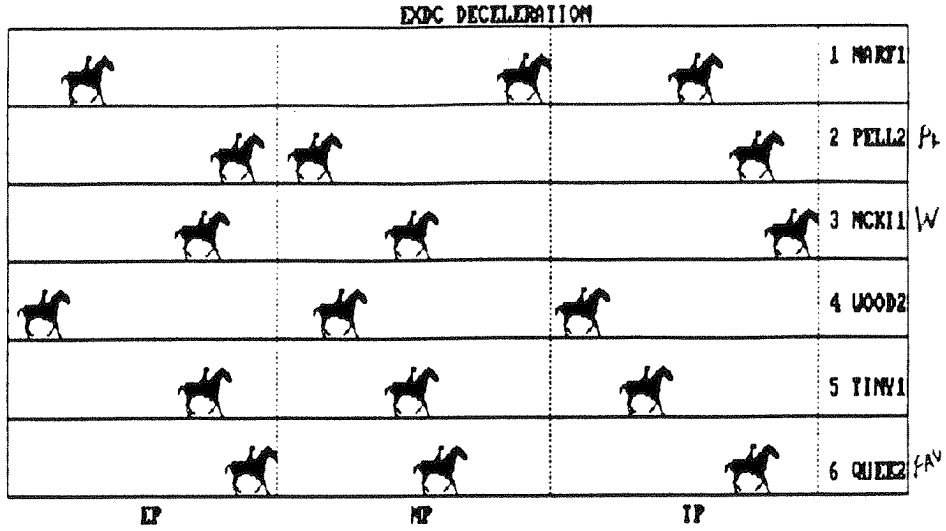
THE ANIMATED THOROMATION SCREEN:

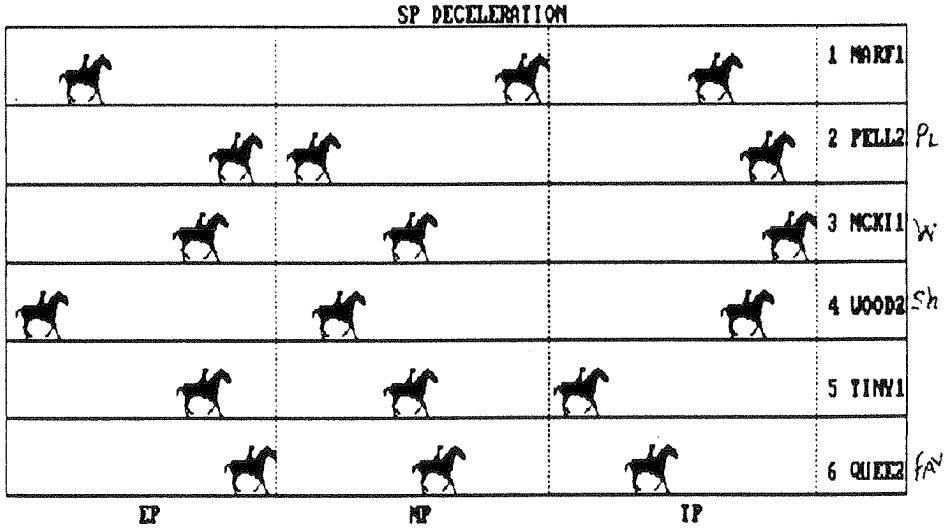
Directed by internal readout factors, contenders move across the computer monitor.



Copyright 2008 SartinMethodology.com - Not for Resale

THE STOP-ACTION SCREENS:





Two different scenarios: EXDC for a NORMAL Deceleration pattern. SP, when circumstances and the Match Up indicate the race will produce an outcome OTHER THAN EARLY. The race is divided into 3 panels, EP = Early Pace, MP = Mid Pace, TP = Total Pace.

This particular race called for a (1) Adjust. QUEEN breaks out first on EP, starts to fade in mid race and flounders at the end. MARFI makes a brief mid pace move after a slow start and then fades. TIM is even and mediocre throughout. PELLI moves out early, relaxes in mid race then comes on for second. MCKI stalks and makes a big final move to win the race. The horsey symbols depict the race as run.

Copyright 2008 SartinMethodology.com - Not for Resale

EXDC RANKINGS:

E X D C

	EP	PR	HE	SP	LX	FX	Muv*
QUEE2	1	1	5	3	5	3	0.00
PELL2	2	3	3	1	2	1	1.37
MCKI1	3	2	2	2	1	2	1.63
TINY1	4	4	6	6	6	4	2.69
MARF1	5	4	1	4	4	5	6.16
WOOD2	6	5	4	5	3	6	7.88

For those preferring to look at numbers. These are the Rankings by category for each contender:

EP = Early Pace – PR = Presser Pace – HE = Hidden Energy

SP = Sustained Pace – LX = Late Energy Expenditure – FX = Factor X

If the crowd had these readouts they would not have made QUEEN a prohibitive favorite.

The last designation on the above readout is MUV. It provides significant information and is an ideal Modeling tool. MUV stands for **Match Up Variegate**. It numerically depicts each contender's relationship to the early leader. QUEEN is ZERO because it had the EARLY Dream Race ENERGY. As you can see the Win and Place horses were only behind by 1.63 and 1.37 respectively. Skilled users draw a line under or over that which a horse cannot win or be close. This is a factor of record keeping. MUV *defines*, it does not rank LOW as best. Under various racing situations by distance, surface, etc., HIGH may be more predictive than LOW. Only through experience and keeping records can the user benefit optimally from this readout.

EXDC: EMUV-SMUV-U X R NUMBERS:

	Matchup		
	F 1	F 2	F 3
Pace	35.35	34.31	31.72
QUEE2	35.35	33.80	30.58 –
PELL2	35.21	33.03	31.54 +
TINY1	34.87	33.63	30.00
MCKI1	34.83	33.63	31.72 –
MARF1	33.65	34.31	31.10
WOOD2	33.21	33.18	31.37

	Varius Modules of Exdc		
Name	Emuv	Smuv	uXr
Fav.QUEE2	0.000*	0.393*–	0.393
PL-PELL2	0.187	0.250 +	0.437×
TINY1	0.148	0.739	0.886
W-MCKI1	0.219*	0.219× EVN	0.438×
MARF1	0.506	0.719	1.225
S-WOOD2	0.659	0.781 +	1.440

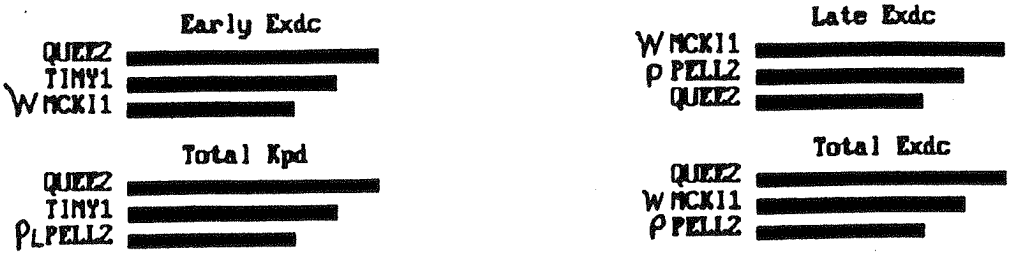
This readout is most telling. Emuv = Early Match Up Variegate. Smuv = Sustained Match Up Variegate and UXR = Units of Energy Needed to Recover the TOTAL DREAM RACE ENERGY. It depicts MOVES and Deficiencies within the race RELATIVE TO THE DREAM RACE MATCH UP.

Copyright 2008 SartinMethodology.com - Not for Resale

QUEEN goes from 0.0 to -.393 and holds that .393 deficiency. PELLI has an Emuv deficiency of .187, goes to .250 and ends up with .437. MCKI has an Emuv of .219, holds even at .219 and ends up with .438. Those who try to rank these figures with no consideration other than perceiving LOW as best, should use other readouts. The key to understanding is the fact that QUEEN lost .393 between Emuv and Smuv and never recovered. PELLI lost only .063. MCKI lost nothing. The LOWEST Emuv-Smuv-Uxr numbers are most meaningful when other contenders have BIG Emuv-Smuv deficiencies. THAT'S when 0.0 Emuv horses most often win. Experience teaches that contenders with EVEN, (no difference between Emuv and Smuv numbers), are the most indicative of winners and in-the-money finishers.

EXDC & DECELERATION

EXDC & DECELERATION



Exdc Deceleration Ratio

Name	1st	2nd	3rd	Edr	Ldr	Total	
QUEE2	100.00	97.00	94.77	197.00	191.70	291.70	Ø
MCKI1	97.11	96.02	96.23	193.13	192.25	289.36	W
PELL2	99.21	92.53	94.94	191.74	187.47	286.68	P
TIMY1	97.30	96.03	90.92	193.33	186.95	284.25	
MARF1	90.40	100.00	92.70	190.40	192.70	283.10	
WOODZ	87.90	93.43	88.59	181.32	182.01	269.91	

EARLY EXDC = Early Energy Expenditure relative to Deceleration. Late EXDC = Late Energy and Deceleration. TOTAL KPD = Total KINETIC Potential combined with Deceleration. TOTAL EXDC = Total Energy averaged with Total Deceleration. The EXDC DECELERATION RATIO displays the same information numerically. The 1st, 2nd, 3rd depicts fractional Energy/Declaration percentiles relative to the DREAM RACE. 100 = the Dream Race fractions. Lesser numbers the PERCENTAGE of each contenders relationship to the Dream Race.

EDR = 1st and 2nd Fraction COMBINED. LDR = 2nd and 3rd Fraction combined. TOTAL enumerates the composite of the entire screen. Because of QUEEN'S 100% 1st fraction, its total is 2.34 points greater than MCKI, the winner. Other readouts indicated that QUEEN could *not* sustain its early lead. As in many aspects of racing and life itself, being ranked FIRST is not always predictive of being first.

Copyright 2008 SartinMethodology.com - Not for Resale

More important is the fact that the Total drops off significantly after PELLI. As in all other readouts, the top 3 in this race are MCKI, PELLI and QUEEN.

PROBABILITY:

Name	Probability	Odds
QUEE2	.4749	1.11
MCKI1	.3462	1.89
PELL2	.0892	10.21
TINY1	.0415	23.12
MARF1	.0450	21.23
WOOD2	.0032	99.00

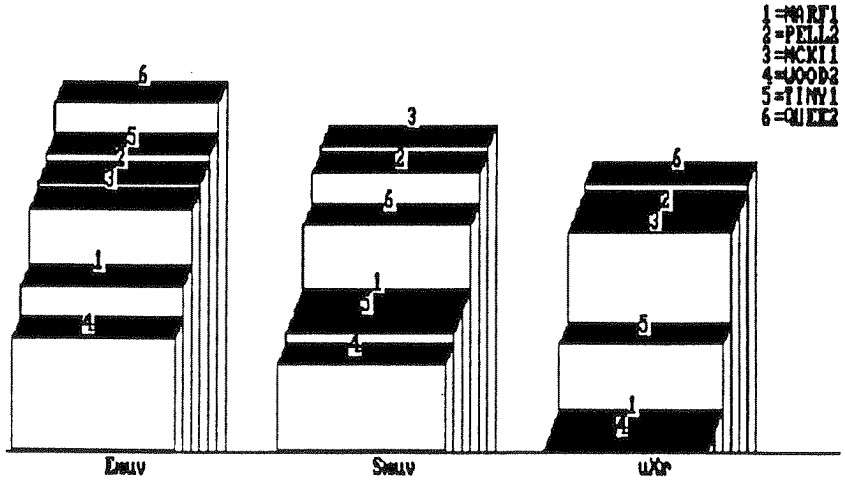
This is a Win Odds Line based on classical math, the kind promoted by top money management experts. As with all formulae derived from classical math it has its shortcomings and is overly sensitive to the ADJUSTMENT selected by the user. Most clients who are not conversant with the CONVENTIONAL ODDS LINES have abandoned its use in favor of Bottom Line-Betting Line which points more dramatically to Overlays.

This line does, however, tell that QUEEN, going off at LESS than even odds is NOT a bet because it should have closing odds of NO LESS than 1.11 to 1. MCKI, with closing odds of 7.1 to one, is an overlay projected at 1.09 to 1. In this race, probability performs well.

It will fail miserably when the user enters horses that are not true contenders. Bottom Line-Betting Line is far more forgiving of errors in user judgment.

BAR GRAPHS:

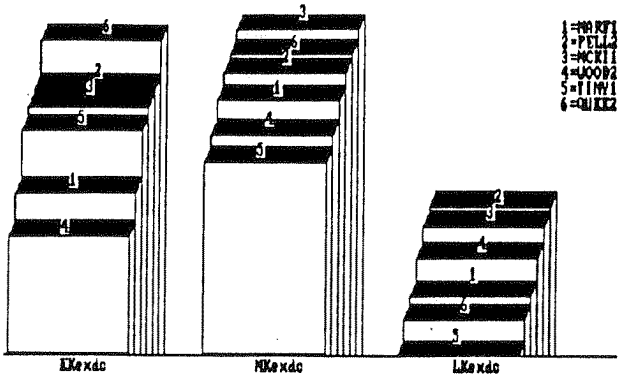
In all cases the numbers above and to the right of the bars ARE NOT ranking orders. They IDENTIFY each contender by its NUMBER. First the EMUV-SMUV-UXR numbers, discussed earlier, in graphic form:

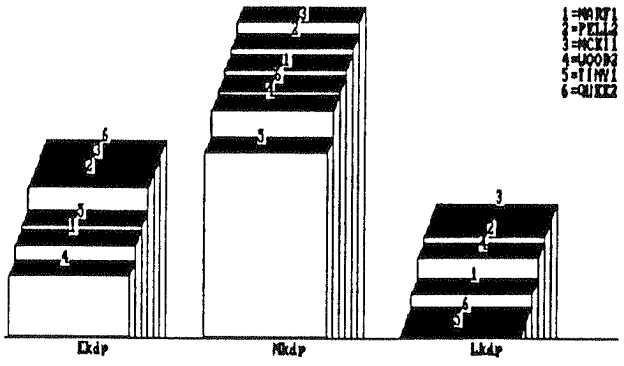


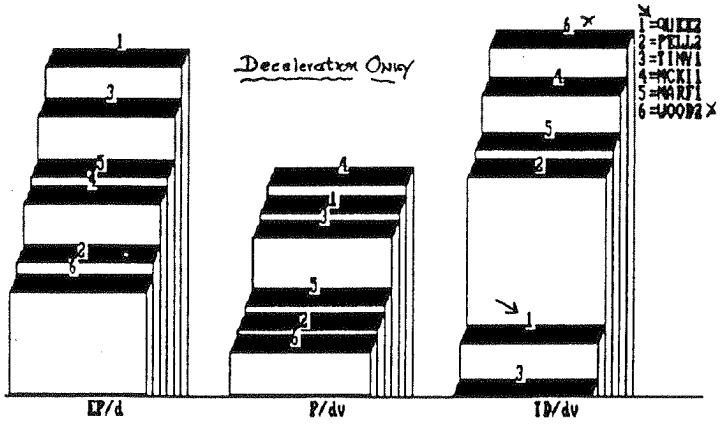
Copyright 2008 SartinMethodology.com - Not for Resale

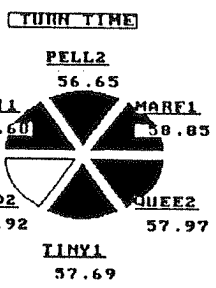
1 = MARFI: This contender is 5th EMUV. 4th SMUV next to the *bottom* UXR 6 = QUEEN. Number 1 EMUV, 3rd SMUV and 1st UXR. The winner, MCKI, is 4th EMUV, FIRST SMUV and 3rd UXR. Just ahead or behind the winner in all 3 designations is the place horse, PELLI. An important reason for this graphic rendering of a numerical readout is the **white space** between contenders. The *amount* of white space is quite meaningful. We see a minimum of white between QUEEN, PELLI and MCKI, but a lot between them and the other entrants.

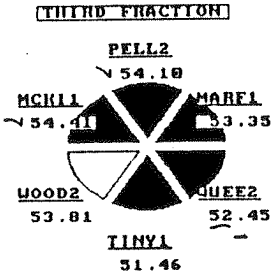
OTHER GRAPHS & PIE CHARTS:

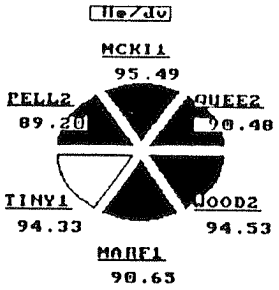


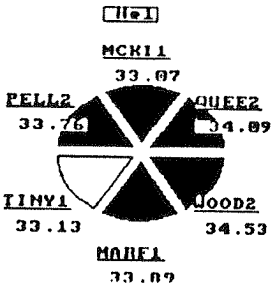


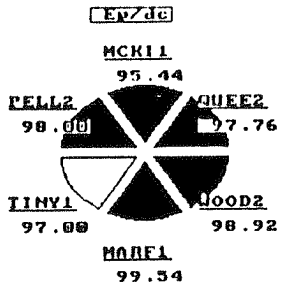


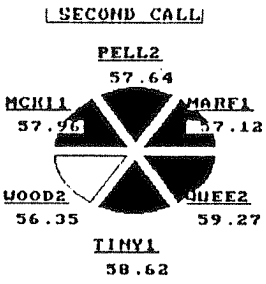






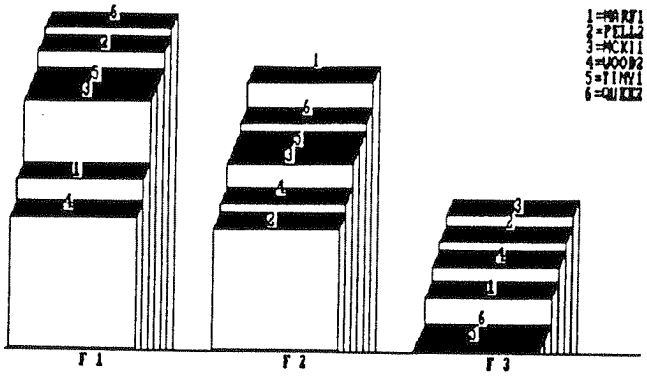


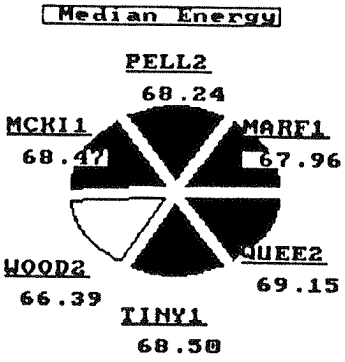




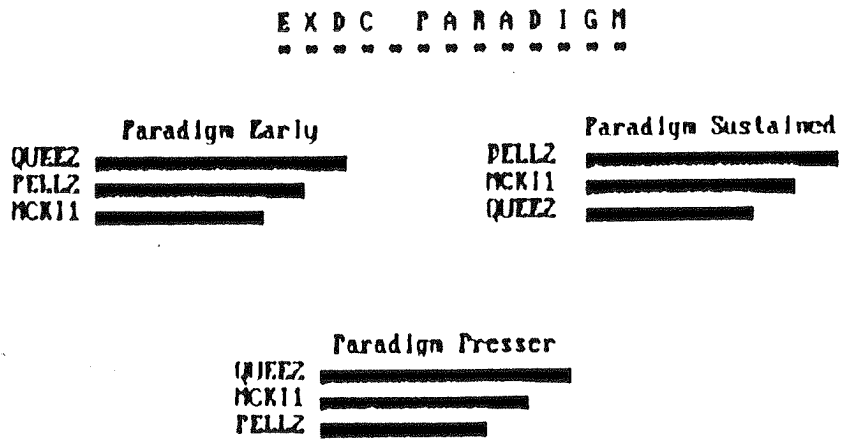
Copyright 2008 SartinMethodology.com - Not for Resale

The FRACTIONAL bar graphs & Median Energy pie chart designate the numerical ratings of each contender by fraction and median energy percentages.





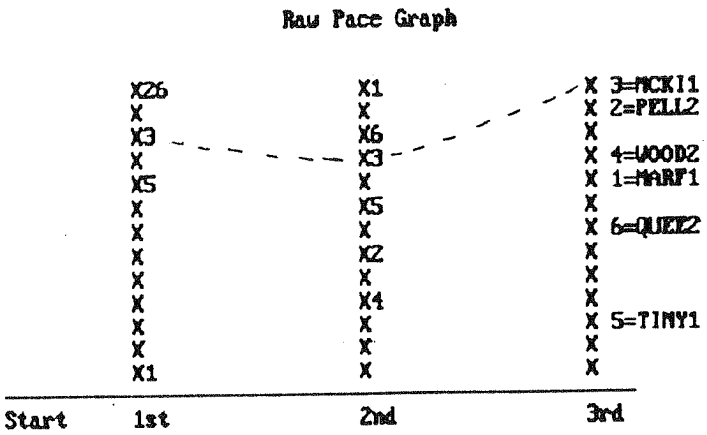
The Paradigms, called PAR on Synergetic Match Up, show the TOP 3 Contenders Early, Presser and Sustained (Late). These are *vital* readouts and usually synthesize others.

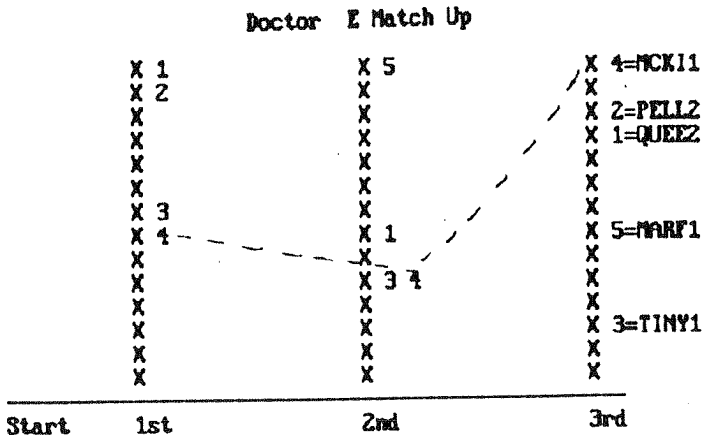


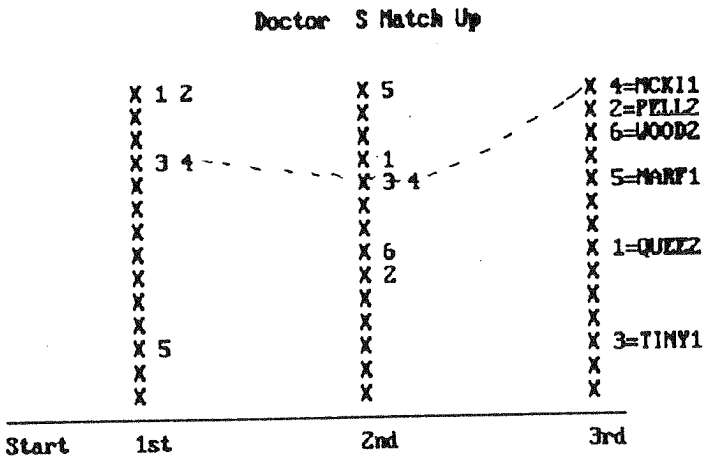
For those confused by numbers alone, these ancillary graphs and pie charts are for those who subscribe to Confucius' statement that a picture is worth a thousand words. Each of the above merely depicts graphically something we've already covered.

The Synergetic Match Up Pace Graph – Just like on a cereal box this is a "connect the dots" illustration. Doing so with MCKI is down two X's in 2nd on 1st. Stays almost even 3 X's down in 3rd place at 2nd and moves sharply to first, just ahead of the Place horse, PELLI at 3rd. QUEEN's gradual demise from 1st to 5th is also depicted.

Copyright 2008 SartinMethodology.com - Not for Resale







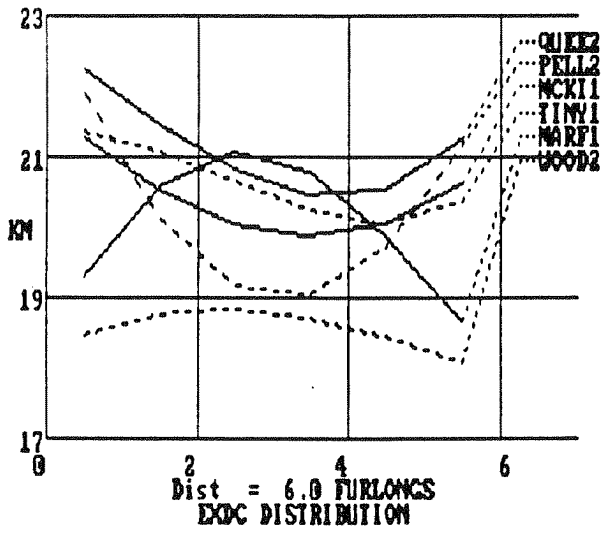
NOTE: Synergetic Match Up was designed as a program to help users make the transition between Velocity and Energy. Hence, the numerical readouts are in feet-per-second.

I described Synergetic Match Up as the "poor man's Thoromation," because it was *almost* as effective. Clients who used both preferred Thoromation but confirmed that Synergetic Match Up was an excellent preparatory tool.

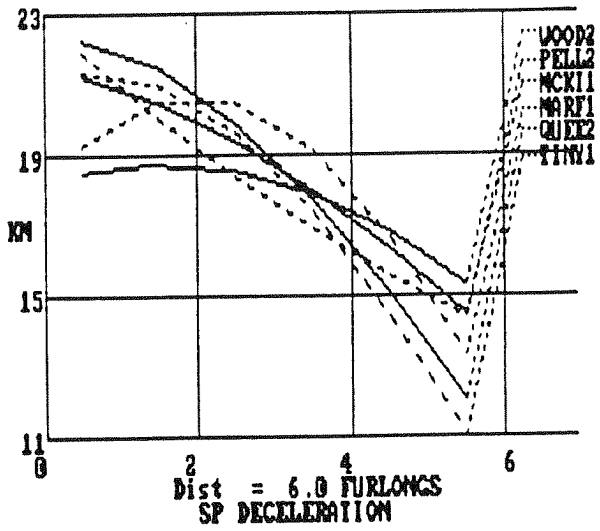
Copyright 2008 SartinMethodology.com - Not for Resale

KGEN

This program exhibits our most advanced concepts in combining VELOCITY as ENERGY with DECELERATION, depicted graphically and numerically..



LEFT GRAPH - EXDC DISTRIBUTION
NORMAL Deceleration curve.



RIGHT GRAPH SP OR LATE ENERGY
BIAS Deceleration curve.

At first glance, the two graphs display a dichotomy since the contender at the BOTTOM of EXDC rises to the TOP on SP. Minds conditioned by "horseplayer" logic find it hard to accept bi-polar depictions. Thus, KGEN'S bright potential is limited to only a minority of users. The greater number could not fathom the importance of the fact that centered in both graphs, just below the two TOP extremes, are the Winner and Place horse. Also clearly displayed is the fact that QUEEN who tops the EXDC graph, slips to 5th on SP. The SP graph has the Trifecta combo in reverse order: WOOD - Show, PELL I- Place and MCK I- Win.

Copyright 2008 SartinMethodology.com - Not for Resale

THE NUMERICAL GRAPHS:

DISTANCE TODAY 6 FURLONGS
KINETIC POTENTIAL FOR EACH FURLONG

MARF1	19.31	20.63	20.62	19.30	16.83	13.54	18.37	24.67
PELL2	21.92	20.15	18.56	17.12	15.83	14.68	18.05	24.70
MCKI1	21.31	20.57	19.50	18.12	16.49	14.67	18.44	25.07
WOOD2	18.49	18.81	18.64	18.00	16.92	15.46	17.72	23.76
TINY1	21.41	21.13	19.80	17.55	14.62	11.31	17.64	24.17
QUEE2	22.27	21.52	20.00	17.84	15.19	12.26	18.18	24.94
	Ep		Mp			Lp	Kp	Kexdc

From an engineering formula that isolates minute stress areas in buildings and bridges, this series of numbers show the velocity relationships of fractions. LP is the final fraction. KP is Kinetic Potential and KEXDC combined Kinetic Energy/Deceleration Potential. In this race KP and KEXDC are identical. This is <u>not</u> the norm, especially at longer distances.

Follow the numbers across from left to right: QUEEN has 22.18 units in the first stanza, 21.43 in the second. It is clearly FIRST here. By the final numbers in MP Mid Pace section of the race (Line 5) it is overcome by ALL contenders except TINY. By line 7, it is LAST. In KEXDC it is headed by MCKI, the winner, and MARFI who didn't fire.

KINETIC POTENTIAL PER 1/2 FURLONG:. Prior to Fractals this was the only readout from <u>any source</u> that broke a race into segments LESS than those discernible by Racing Form information. To abbreviate the readout, MKP was condensed into a single number.

DISTANCE TODAY 6 FURLONGS
KINETIC POTENTIAL FOR 1/2 FURLONG

MARF1	18.54	19.49	20.14	20.47	19.65	17.30	15.85	14.22	12.47
PELL2	22.32	21.40	20.51	19.68	17.79	16.09	15.48	14.91	14.36
MCKI1	21.50	21.22	20.85	20.40	18.86	16.97	16.10	15.18	14.23
WOOD2	17.74	18.01	18.16	18.20	17.71	16.67	16.05	15.34	14.55
TINY1	20.84	20.97	20.83	20.43	18.24	15.07	13.51	11.89	10.23
QUEE2	22.25	22.07	21.69	21.12	18.83	15.83	14.42	12.96	11.46
	Ekp				Mkp	Lkp			

Copyright 2008 SartinMethodology.com - Not for Resale

The LKP clearly shows the weakness of QUEEN to close after its brilliant start. Only TINY has a lower number. The Win, Place and Show horse rank 3-2-1.

KINETIC MEDIAN & PERCENT EXDC

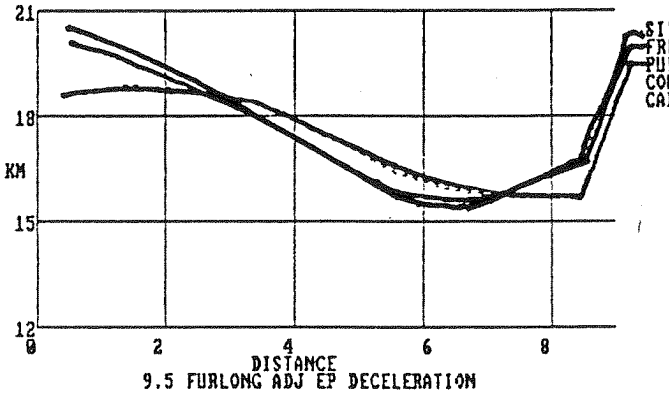
DISTANCE TODAY 6 FURLONGS
KENETIC MEDIAN & PER-CENT EXDC

		Peak	Km	%Exdc
MARF1	6.5	3.23	26.65	50.35
PELL2	5.5	2.69	26.45	51.06
MCKI1	6	2.97	27.22	50.57
WOOD2	7	3.46	25.46	50.57
TINY1	6	2.92	25.86	51.27
QUEE2	6	2.90	26.36	51.59

By distance of paceline this graph shows at what point in its VELOCITY PATTERN a horse PEAKED. QUEEN peaked at 2.9 furlongs. At the other extreme WOOD, the show horse, peaked at 3.46 furlongs. The winner at 2.97, the Place horse at 2.69. MARFI peaks late at 3.23 furlongs. In the KM, Kinetic Median segment, MCKI, the winner ranks first and coasts home. The KM, once ERRONEOUSLY called the Fulcrum, is the key readout, particularly in Sprints.

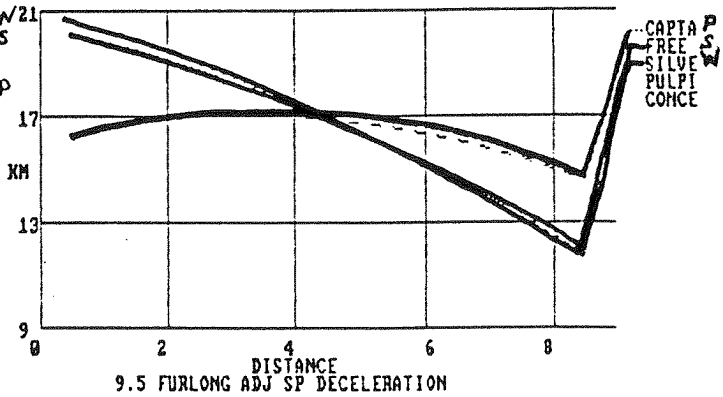
KGEN and the 1997 Kentucky Derby. Isolating the first three finishers in this year's Derby and Preakness was no great feat. But because they are such highly publicized races I'll use the top contenders to further demonstrate the power of KGEN.

EXDC GRAPH



9.5 FURLONG ADJ EP DECELERATION

SP GRAPH



9.5 FURLONG ADJ SP DECELERATION

Copyright 2008 SartinMethodology.com - Not for Resale

SILVER and FREE, the Win and Show horse, top the EXDC graph. CAP lags behind. Then on the SP graph, CAP emerges 1st. But of prime importance is the fact that the Place and Win horse *remain* in the top three. The close finish of both races is clearly depicted.

		Peak	Km	%Exdc

KINETIC POTENTIAL per furlong puts SILVER on top at the end and CAPTAIN 1st by a wide margin on Lp. Even the Show and Win horse rank 2nd rank and 3rd Lp. The per 1/2 furlong lines show the winner, SILVER as best. On the graph below, CAPTAIN peaks LATE at 4.72 furlongs. SILVER at 4.59 Furlongs; FREE at 4.60 furlongs.

Most aspiring handicappers balk at having to *interpret* anything. They seem to prefer to be spoon-fed with only one or two readouts pointing to winners and in-the-money finishers. That's why we created the Pace Launcher series.

However, those who took the trouble to understand the power of KGEN wouldn't trade it in for *anything*!

Copyright 2008 SartinMethodology.com - Not for Resale

PACE LAUNCHER

THE PACE LAUNCHER SERIES was developed to solve the problems and answer the questions posed by users of other programs since 1982. Hidden within the algorithms that produce the readouts of Pace Launcher 4 is virtually *everything viable* in all other programs except Thoromation's animated and Stop Action horse screens.

The program goes far beyond the limitations of Phase I and III and their derivatives, Ultra Scan and Synergism. The power of KGEN, Entropy and Fractals is incorporated. The readouts are so simple and easy to comprehend that most users cannot discern where KGEN, Entropy or Fractals come into play. That is by design. The object of this program is to reveal only the end result of the complex, esoteric factors that, in their original form, created problems for some.

Further, Pace Launcher's effectiveness is not altered by a bi-polar adjustment choice. Its readouts reflect only Raw and Adjusted. The Adjustment procedure is entirely automated except for Track Class differentials for which Manual Adjustments are made from instructions.

A secondary reason for creating Pace Launcher was selfish. I wanted a program for my personal use that would make me feel completely comfortable making the kind of large bets attributed to handicapping's big names. Betting $400 per day with a 1.64 R.O.I. produces $256 profit. Wagering $1,000 per day nets me $640 profit. I was never able to make that transitional investment leap before Pace Launcher. The program also offers more clearly defined features for winning the exotics.

All readouts in Pace Launcher are co-related and supportive of each other and are almost self-explanatory. To demonstrate, I'll use a race from a track *not* in Los Angeles, Chicago or New York, from which many authors take their examples and where most mainstream notions are fostered and jockey/trainer tendencies are nationally well-known. Here is a race from Seattle's new Emerald Downs where I've never been and have no inside information. Pace Launcher will do all the work.

I used every horse in the race except CAPT'N RISKY and CASEY. They show nothing to indicate even being in-the-money. I used TWO lines for JOVE and Mr F. The first line for each was for today's 6.5 distance. The 2nd line from 6 f. In JOVE's case the 6.5 furlong line had a better SR but I needed to compare the value of 6 and 6.5 SR'S at this track. Don't be afraid to do this. Let the computer program decide which line is superior. Since I equalized all lines to 6.5 Furlongs, the difference is a moot point. Please don't be afraid to experiment in this manner.

Always insert an N number (need to lead). When doing so you'll be looking for N1 horses that cannot wire the field and N2 horses that cannot hold position. Under T we see a Tandem won by LOOS, in which JOVE finished 3rd. **Always** note Tandems. Those failing to take the two simple steps of inserting N numbers and Tandems, are forsaking factors that can produce extra wins.

The N1 and N2 for the two PRIN lines asks us to look closely at the horse's Final Fractions and Late Energy. Can it hold a lead against this field??

HI/LO Difference = 2.66 Average = 167.62

PRIN2 is #1 F-1 and 2nd Call. But, and this is *very* important, it loses ground against the others in Fraction 2 (TT). It has a dismal final fraction, F-3 (51.82 f-p-s. 30.92 Energy). Compare its F-3 with the competition and ask: can it go wire-to-wire TODAY?

Right away this narrows the field to only three potential winners.

NOTE: You may well dispute my choice of PRIN2 over PRIN1. That's OK. I tried both lines and based my decision on PRIN2's top F-1 and 2-C rankings. The important lesson here is DON'T be afraid to enter MORE than one line per horse. Analyzing one or more lines will pay dividends.

For those who want to use PRIN1 and JOVE1, here is what you'd see:

RAW PRIN2 is better than PRIN1. ADJUSTED PRIN1 is tied with JOVE1. PRIN was the 6 - 1, JOVE is the 12.4 to 1 overlay. In the actual race PRIN tried for the lead and faded.

This alternate projection demonstrates that Pace Launcher will forgive a lot of paceline selection errors: Yours or mine. Using PRIN's last line produces a better Adjusted rating. The line I chose is more representative of how the horse actually ran in match up. Most important is the fact that JOVE projected as an OVERLAY BET in both scenarios. It paid $26.80 - $10.80 - $6.40. BOTH lines were double digit Bottom Line rated.

Noting that JOVE ran well in a Tandem against LOOS tells us that both its last two lines are acceptable in today's match up. I did not alter JOVE'S Tandem Race Beaten Lengths!

Mr F has the LOW (low is best) Line Score. JOVE2 is tied for 2nd, JOVE1 is a close 4th. The prime reason for looking at more than one line for a horse is to determine how close the lines are to each other. In the case of Mr F they were far apart. JOVE's are extremely close. This indicates JOVE is a more consistent horse.

A reluctance to HIDE is the main reason a few clients don't get optimal results from Pace Launcher. Why they persist in cluttering their final decision readouts with horses that don't belong has been a question for the ages. Refusal to make a HIDE decision is high on the list of reasons for lack of success!

With JOVE2 consistently showing better than JOVE1, use JOVE2!

Our statistics show a higher proficiency when using the best of several lines regardless of other factors, especially beaten lengths.

THE ENERGY GENERATOR

ENERGY GENERATOR -- ATM

#	NAME	L	N	T	Total R	DEF	Hid R	Fx R	%Med	E/EP R	L/EP R	ESP
1	PRI2	3	1		167.59- 2	1.73	64.32- 5	66.60- 1	69.08	78.89- 2	76.48- 5	E/P
2	JOVE	1	3	1	167.05- 4	2.27	66.70- 2	65.85- 5	67.44	78.16- 4	77.39- 3	SUS
3	JOVE	2	2		166.66- 5	2.66	66.95- 1	66.27- 3	66.78	77.81- 5	77.70- 1	LAT
4	LOOS	2	1	1	167.37- 3	1.95	65.78- 3	66.22- 4	67.99	78.45- 3	77.13- 4	S/P
5	MR.F2	2	2		169.32- 1		65.36- 4	66.46- 2	68.18	79.17- 1	77.65- 2	S/P

Mr F has the high TOTAL ENERGY. JOVE2 the low. However, it's not low enough to make any real difference since the horse ran competitively with LOOS in a Tandem Race. Right away we can see that Need to Lead horse PRIN2 is #1 EPR but falls apart on LPR, CPR. TT and Hid. It has good FX and FW rankings *only* because it performed so well EARLY. Both of JOVE'S lines show it as a contender who begins moving in the second fraction. Consequently its Early, X and W and Balance rankings are low, something to be expected from a horse with ESP designations of SUS and Late. Even Mr F's F-3 is suspect. Perhaps that's why it didn't hold on to win but placed.

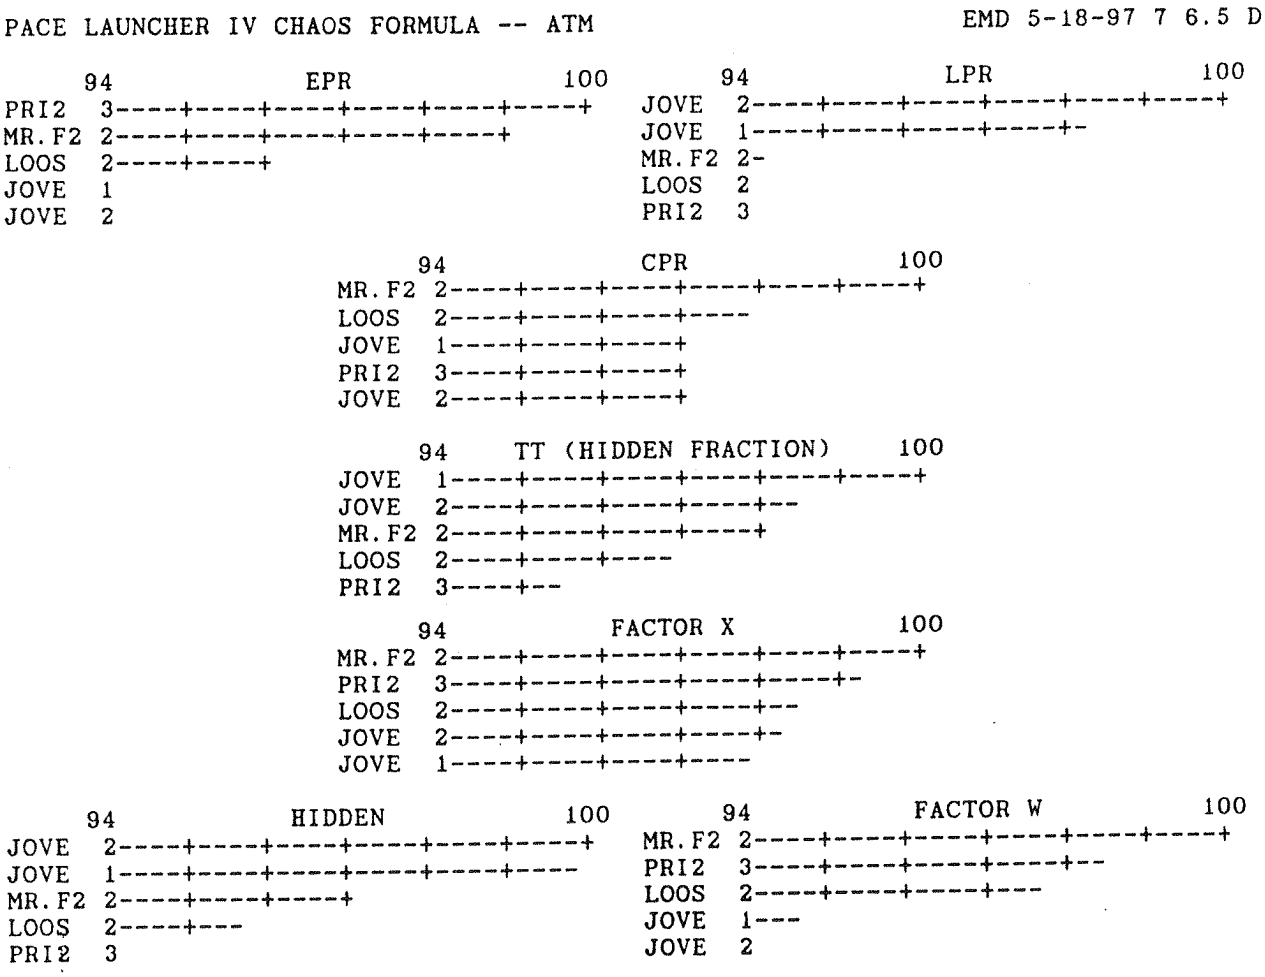
There are still clients who fail to utilize the FPS & ENERGY screen because they subtract lower f-p-s and/or Energy numbers from higher and reach erroneous conclusions. Here is an example of thier faulty reasoning:

F–1: PRIN2 = 59.80	F–3: JOVE2 = 55.36
JOVE2 = 55.09	PRIM2 = 51.82
DIFF: = 4.71	DIFF: = 3.54

To the linear mind, PRIN2 still has an advantage of 1.17. (4.71-3.54 = 1.17). Over the years we've lost a few clients who refused to abandon linear math. FIRST fraction Velocity/Energy is NOT comparable to FINAL fraction Velocity/Energy. In F-1, horses may Accelerate or Decelerate rapidly. Leads often change several times. In F-3 ALL horses are DECELERATING. A f-p-s or Energy advantage in F-3 has almost TWICE the value as in F-1. This is why our formulae applies different BEATEN Length values to F-1, F-2 and F-3.

Copyright 2008 SartinMethodology.com - Not for Resale

THE CHAOS FORMULA STICK GRAPHS:



Composite Rankings are linear. Ranking numbers are based on numerical sequences that are always WHOLE NUMBERS apart. The stick graphs delineate the *fuzzy* area between each WHOLE number separation.

Like the Chaos formula stick graphs in Quad Rater, these depict not only ranking order by category but by degree of difference. For example, JOVE2 ranks 5th on Composite but shows no stick graph line on EPR. PRIN2 has a 100 figure, meaning 100% of the Dream Race Potential. Mr F2 is 20 units behind. By the Second Fraction, TT, JOVE1 is far ahead of Mr F. JOVE2 is a little ahead. BOTH of JOVE's lines extend FAR beyond that of PRIN2. For those who appreciate DEGREE of DIFFERENCE, these graphs will be important, especially for exotic wagers and when keeping accurate current profiles.

Those who don't care about understanding non-linear distinctions can ignore these screens. Many Pace Launcher users enjoy success without understanding or thoroughly using them.

With past programs failure to comprehend complex factors and/or esoteric language were chief causes of user confusion. Success with Pace Launcher is *not* dependent on any special user capacity to comprehend or interpret complexity or advanced theorem. Most of the readouts can be ignored without impeding at least a degree of success. For those who don't wager large

Copyright 2008 SartinMethodology.com - Not for Resale

amounts, avoid exotics and are satisfied with less than optimal profit, here is a shortcut–

FIVE QUICK STEPS FOR SUCCESS WITH PACE LAUNCHER:

There are those who do well by comparing and analyzing all readouts. There are more who do not. They become confused instead of decisive when trying to absorb a multitude of information. Here are five quick steps to success for those who do not Model or maintain an on-going Profile.

AFTER ENTERING PACE LINES:

Don't be afraid to enter or download more than one line per horse. Instead of trying to make a perceptual judgment call, use the line with the best Composite and SPN ranking.

(1) Equalize* Distances (*EXCEPT in races where TODAY'S distance is 5 or 5.5 furlongs and there is more than one TRUE CONTENDER in the race with a line used from one or both of these shorter distances). Let 6, 6.5 and 7f horses stand on their actual merits WITHOUT Equalizing Lines. At some tracks this also applies to longer routers going to a mile. Check it out.

Note RAW readouts if you choose, but most tracks and distances produce MORE winners from ATM.

(2) GO to Energy Generator. Check all readouts. Pay special attention to highlighted figures, TOTAL ENERGY, E/ep-L/ep and ESP.

(3) GO to Composite screen. Hide all but the top 6 or 7 (for the more timid, best rankings. LOW is best).

(4) GO to VITAL FACTORS. For Win only, Hide all horses with an SPN ranking worse than 6.

(5) GO to Bottom-Line/Betting Line and wager accordingly.

WIN ODDS ONLY

RAW				ADJUSTED

8 MR F.	0.0	20-1	17	9 ACK	0.0	20-1	13

Those keeping PROF-RATER PROFILES will need to view the E-L Diff and BOTH/AND Graphs. Use the VECTOR GRAPH if you understand it. The PACE GRAPH is a good shortcut but don't expect the FASTEST lines to always win. Look for wide separations between the FASTER and SLOWER lines. PACE GRAPH is only effective when distances are equalized.

Copyright 2008 SartinMethodology.com - Not for Resale

Pace Launcher's main advantage over other programs is that the user doesn't have to understand anything except the above 5 steps and readouts, all of which co-relate to each other.

For those seeking maximum results:

THE E/ep - L/ep POTENTIAL GRAPH.

11 MR.F2	2	2	79.17	1	77.65	2	169.32	1	3

BAL COLUMN: LOW = BEST

Early/Late Energy Potential Graph -- ATM EMD 5-18-97 7 6.5 D

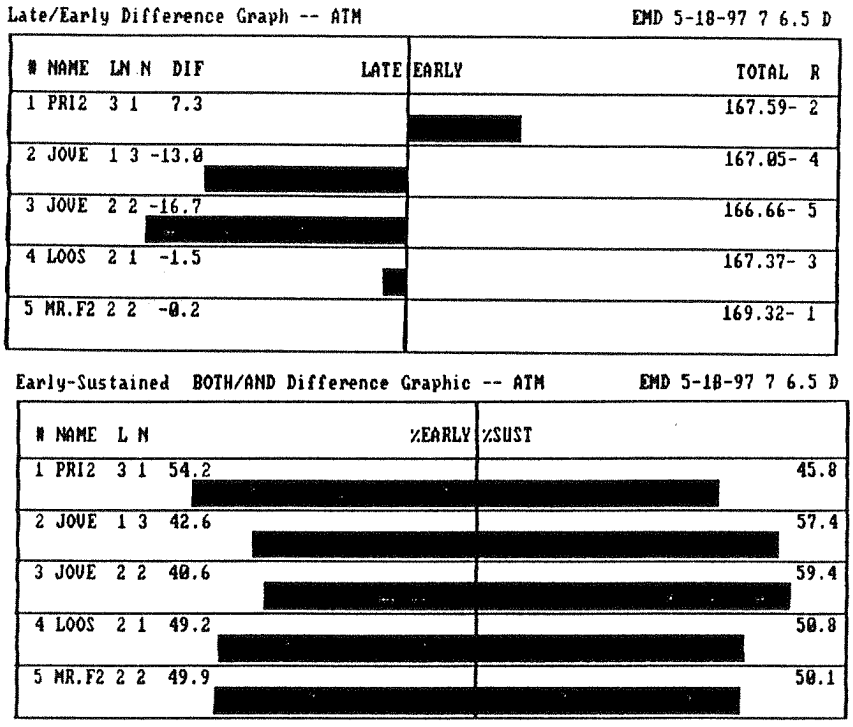
# NAME	L	N	EARLY	R	LATE	R	TOTAL	R	BAL
1 PRIM1	1	2	78.81	2	76.77	4	167.71	2	6
2 JOVE	1	3	78.16	4	77.39	3	167.05	4	7
3 JOVE	2	2	77.81	5	77.70	1	166.66	5	6
4 SPECx	2	2	78.68	3	76.39	5	167.07	3	8
5 MR.F2	2	2	79.17	1	77.65	2	169.32	1	3

BAL COLUMN: LOW = BEST

Horses with LOWER Balance Rankings have won the majority of races we've researched over the past several years at all distances. However, when the track or match-up dictates an IMbalance, this readout will reveal it. We've already seen that JOVE is not well balanced but is a late runner. Its L/ep Rankings confirm this. JOVE2 is LAST in E/ep but FIRST in L/ep. Even so, when narrowing the race down to its true contenders, JOVE2's BALANCE is equal to that of PRIN2 and better than LOOS. The Place horse, Mr F, is the best balanced.

Copyright 2008 SartinMethodology.com - Not for Resale

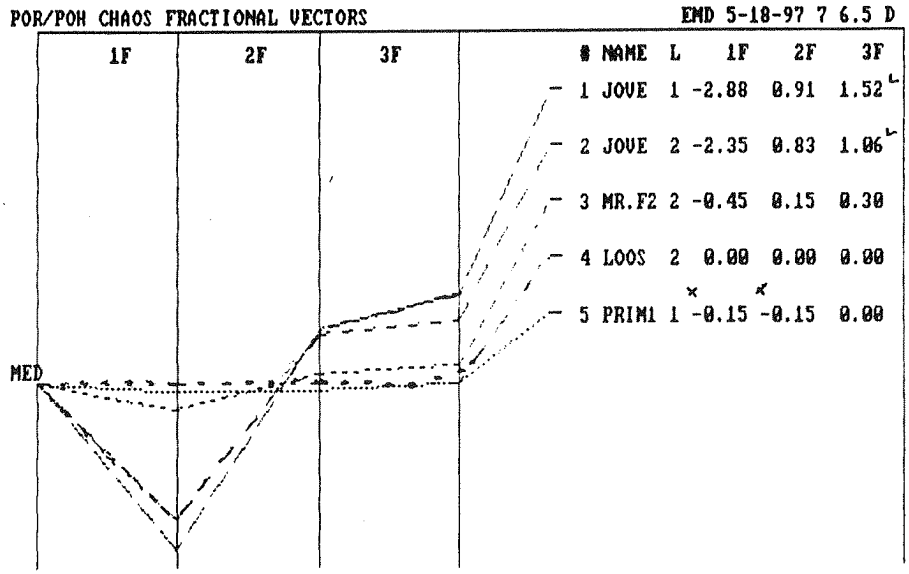
For those keeping Profiles, viewing the Early Late Diff and BOTH-AND graphs often spells the difference between winning and losing. These graphs are particularly important when wagering Exotics. They reveal WIN and COUNTER ENERGY more dramatically than any set of numbers.



PRIN2 dominates EARLY to a degree that it's almost off the graph. JOVE has a similar pattern LATE. LOOS and Mr F appear virtually tied for balanced Energy Distribution. Here is where the astute user will refer to the E/ep-L/ep graph and determine that Mr F has both the superior Early and Late Potential.

The answers are *there*. Unfortunately many users fail to look for and find them.

THE VECTOR GRAPH.



Copyright 2008 SartinMethodology.com - Not for Resale

A lot of users fail to grasp the value of this graph which is just another version of Quad Rater's POR-POH readouts. Many incorrectly deduce that the contender whose name appears at the top is ranked number 1. While it works out that way in this example, that's not the way to interpret this graph.

The horse whose name appears at the top has the BEST F-3f GAIN on the PACE OF RACE against which it ran. Both of JOVE's lines show strong F-3 VECTOR moves. Contrariwise, both of PRIN's lines show virtual wire-to-wire VECTORS (0-0-0) (–.15, –.15, – 0). LOOS runs almost an identical pattern. Mr F is slightly behind in F-1 but makes a continuous gain through F-2 and F-3.

It now behooves the user to check pacelines and F-P-S Energy figures and determine the POR against which these VECTOR figures were achieved.

Here's how it looks on Quad Rater:

Copyright 2008 SartinMethodology.com - Not for Resale

To the left are the Fractional and 2C f-p-s values. Quite obviously Mr F2 ran fastest against the fastest POR. The F-3 weakness of PRIN is also exposed. It ran even against a POR F-3 of only 52.66. Compare this with JOVE2. It overcame a 55.93, running 56.53. Each contender ran against a 2-F of about 57.39 Mr F and JOVE were the only horses to exceed their POR F-2. Not so surprisingly, they Placed and Won.

Other Quad Rater readouts support the same concept. JOVE tops the Long Shot Detector figures. It paid $26.80 to win. JOVE is also #1 on the AUTO & AUTO-S Cigar Graphs. It has always been a deep mystery to me why some Quad Rater users said they couldn't (wouldn't) understand how to use and interpret this outstanding program. Those who could use it have asked that we incorporate its salient features onto Pace Launcher. We are in the process of doing so. We'll also add BALANCE Rankings to the E/ep-L/ep graph and BL-BL.

THE PACE GRAPH

Pace Match Up Graphic -- ATM EMD 5-18-97 7 6.5 D

# NAME L N T	1C R	2C R	FT R
PACE	22.07	45.66	116.40
1 ACK x2 2	22.67- 5	46.23- 5	117.79- 7
2 PRI 1 2	22.58- 4	45.90- 3	117.38- 3
3 PRI2 3 1	22.07- 1 ✓	45.66- 1 ✓	117.50- 5
4 JOVE 1 3 1	23.73- 8	47.33- 8	117.47- 4
5 JOVE 2 2	23.96- 9	47.80- 9	117.47- 4
6 SPECx2 2	22.53- 3	45.95- 4	117.70- 6
7 LOOS 2 1 1	23.05- 7	46.40- 6	117.20- 2
8 MR F.1 2	22.96- 6	46.45- 7	117.80- 8
9 MR.F22 2	22.50- 2	45.82- 2	116.40- 1

This graph is more significant when most potential contenders are seen. Discarding non-qualifiers becomes quite simple. Eliminating ALL the top 4, or 5 (for exotics) under FT R (Final Time - Ranking).

HIDE ACKx R#6, SPECx R#5, Mr F1 R#8. We're left with both lines for JOVE, Mr F2, LOOS and PRIN2. At this point either line for JOVE makes it a wager. I used the best.

Pace Match Up Graphic -- ATM EMD 5-18-97 7 6.5 D

3 LOOS 2 1 1	23.05- 3	46.40- 3	117.20- 2
4 MR.F22 2	22.50- 2	45.82- 2	116.40- 1

Copyright 2008 SartinMethodology.com - Not for Resale

After getting the race down to its ***true*** contenders, don't get carried away by slight differentials in projected FINAL TIMES. The difference between Mr F's 116:40 and 117:2 to 117.79 is significant. Differences between 117:20 and 117:47 are not. When in doubt go to BOTTOM LINE - BETTING LINE (BL-BL).

For those tempted to enter XPEDIT off its last Sprint Line and Auto Project it (p), here are more lines for the horse. It always lags behind which may give rise to the notion it wants to route. Look at its Route line 4 back, its only route. It lagged even FARTHER behind. We inserted the horse for a quick look. It ranked next to last in Total Energy, with the worse BALANCE of any other horse except MORN.

ONEAT, the other possible projection, only has the 3 lines showing. In Maiden Races at any but the highest Class level tracks, Auto Projecting sprinters into routes is dangerous until you've determined from result records just how fast a horse must sprint in order to stretch out and win. This would be a good race to use the EDIT feature and slow sprint times down by whatever those records indicate.

I entered TWO lines for JOCKO. Inspecting more than one line for a contender is something all too few users are willing to do. It pays dividends. Statistically using the BEST line is the more profitable. JOCKO1 has a SR of 80 and a DV of 7. A net SR of 75.5 JOCKO 2, SR 75, DV 17. NET = 75. Too close to call. I entered both lines and let SPN and Bottom Line make a final distinction.

Those adhering to popular wisdom concerning final beaten lengths will never win races like this. SUMM was beaten 12 lengths JOCKO1, 8.25, JOCKO2, 9 lengths. What popular wisdom "rules" fail to consider is that this is a $6,250 MAIDEN CLAIMING RACE with a purse of only $2,900. The obvious choice is HEAV, with a SR of 87, beaten only 1.25 lengths. Obvious choices are usually prohibitive favorites and don't pay off well enough to earn their backers a profit.

I've been asked to further explain when to enter a 0 (ZERO) for Speed Rating. Look at MORN. It came from Portland Meadows with a published SR of 67. Enter 0 and when program asks: From (1)EMD - (2)OTHER, press 2 and look up the 8f 3 year best. It was 137.1. This gives the horse a plus 8 Track & Speed Adjustment and a new SR for 8 f. of 70.

In this case it makes little difference. Often it will. Be sure to notice when a horse is shipping from another track.

HI/LO Difference = 4.26 Average = 156.52

Looking at EVERY HORSE IN THE RACE – First note Total Energy. HEAV is tops, followed by FIRST and JOCKO, 3rd & 4th. SUMM is 5th but when we decide which line to use for JOCKO, SUMM will rank 4th. These are the TOP 4 Energy Class contenders in this race.

Instead of being High or near-High, the projected sprint lines rank 6 and 10. NOT a definite NEGATIVE for sprinters stretching out. Now view the E/ep-L/ep BALANCE. These figures, along with SPN, are most significant developments in the Methodology since Energy/Thoromation. Utilize their POWER!

Look at the two sprinters. Note their poor balance: 12 + 5 =17, & 5 +11=16 respectively. Even a minimum amount of record keeping will tell you that this imbalance is enough to eliminate the horses without fear.

HEAV owns the BEST Balance: 1+1=2. Next comes FIRST, 2 + 2 = 4. Then it's JOCKO, line 1: 4 + 3 = 7. Line 2: 3 + 6 = 9. After JOCKO it's SUMM, 7 + 4 =11.

HIDE all but the TOP 5 horses on ENGEN Factors:

Step (5) BOTTOM LINE BETTING LINE

BOTTOM LINE -- BETTING LINE EMD 5-29-97 1 8.5 D

WIN ODDS ONLY

	RAW				ADJUSTED		
	BOTTOM LINE LS	BETTING LINE ODDS	BAL		BOTTOM LINE LS	BETTING LINE ODDS	BAL
1 HEAVE	23.5	EVEN	2	P 1 FIRST	22.0	EVEN	4
W 2 JOCKO	19.5	EVEN	4	Ø 1 HEAVE	22.0	EVEN	2
P 3 FIRST	19.0	EVEN	6	W 2 JOCKO	19.5	EVEN	6
S 4 SUMM	12.0	7-2	8	S 3 SUMM	14.0	2-1	8

Mainstream "rules" would eliminate JOCKO and SUMM from consideration. The computer program's superior formulae did not. Maybe this is why Garry Kasparov lost to Deep Blue.

I'm delighted that the winner DOES NOT rank in the Top 2 BOTTOM LINE. This is a textbook example of WHY users should look beyond just the top 2 NUMERICAL choices and focus on overlays.

The Place horse, FIRST, ranks on top. HEAV, who didn't fire, is next. Then the winner, JOCKO, $17.20 followed by SUMM to show at $6.20. All four were DOUBLE DIGIT Bottom Line Horses.

HEAV and FIRST were virtual co-favorites. 2.7-2.9 to 1. Following my wagering recommendation, the Exacta bet would be Box Top 3 HEAV-FIRST and JOCKO, $55.40. TRIFECTA: Box 4, HEAV, FIRST, JOCK and SUM, $308.60

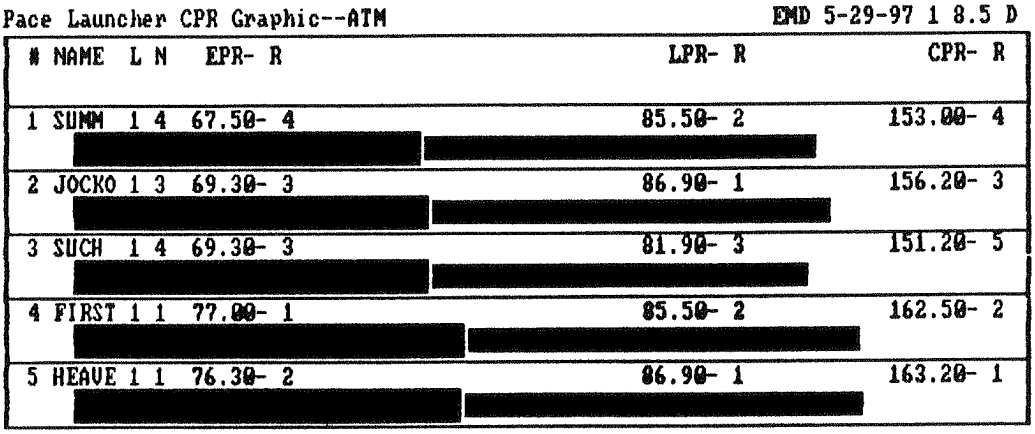
The Graphs

If Confucius was correct and a picture is worth a thousand words, these graphs should add thousands of dollars per year to the income of everyone who fully utilizes their power.

Sometimes numbers alone can be confusing. Each graphic line is calibrated to depict the actual degree of difference between horses by category. As the horsy screen did for Thoromation, these graphs depict each contender's *moves* within the race.

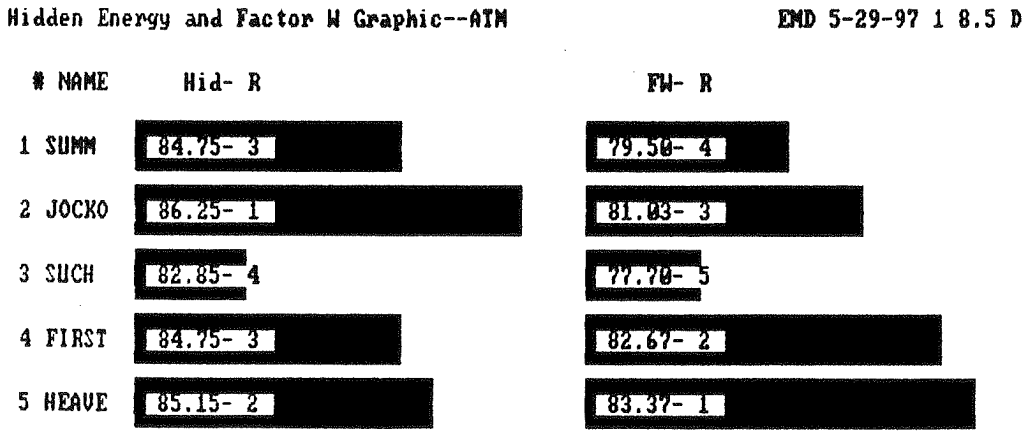
Here is a graphic picture of race #1, May 29 at Emd.

THE CPR GRAPH:



In the early going (EPR) FIRST owns a very slight edge over HEAV. HEAV then comes on Late (LPR) and ranks #1 Composite (CPR). But JOCKO is also ranked first LPR, tied with HEAV. SUMM is tied with FIRST for 2nd ranking. SUCH is an even 3 EPR-LPR and ranks #5 on CPR.

HIDDEN & FW GRAPH



Here we see clearly where JOCKO made the move that tied it for #1 LPR. HIDDEN represents the Energy Exertion of the 2nd and final fraction COMBINED. Because this move *is* Hidden, the crowd seldom recognizes it. SUMM'S line tells why it Showed. It is tied with FIRST for a 3 ranking. HIDDEN is one of our strongest readouts at all distances. Factor W (FW) represents the combination of Early and Late Energy. SUCH has dismally short lines on both graphs and can be

Copyright 2008 SartinMethodology.com - Not for Resale

eliminated without concern. HEAV and FIRST dominate FW. JOCKO is the only other horse with an 80+ figure.

EARLY-LATE POTENTIAL GRAPH - With BALANCE Ranking

This is the Methodology's newest weapon and, perhaps its most potent. It reveals Early and Late Potential and their Balance as no previous formula from any source has ever done. It can predict wire-to-wire winners who have never had a wire-to-wire paceline. It can project SUSTAINED potential even when all signs point to a contender as being Early (1997 Kentucky Derby).

Early/Late Energy Potential Graph -- ATM EMD 5-29-97 1 8.5 D

# NAME L N	EARLY	R	LATE	R	TOTAL	R	BAL
1 SUMM 1 4	74.67	5	74.17	4	156.85	4	9
2 JOCKO 1 3	74.86	3	74.40	3	157.44	3	6
3 SUCH 1 4	74.71	4	73.91	5	156.67	5	9
4 FIRST 1 1	75.31	2	74.48	2	158.42	2	4
5 HEAVE 1 1	75.32	1	74.62	1	158.61	1	2

BAL COLUMN: LOW = BEST

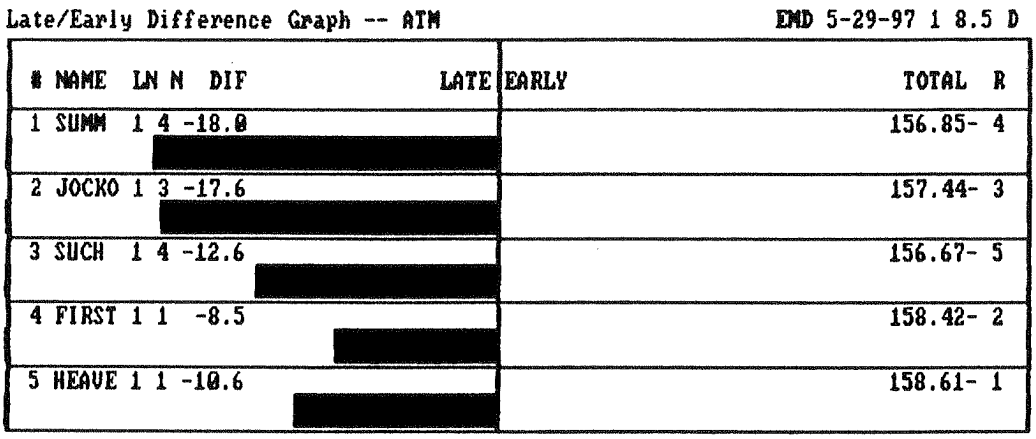
Under BAL, LOW is Best.

HEAV, a favorite dominates both E/ep and L/ep and has a Balance of 2. FIRST is 2nd in both areas with a Balance of 4. SUCH has more Early potential than Late. Its negative move from Early to Late disqualifies the horses. SUMM makes a positive Late potential move, going from 5th Ranked to 4th. JOCKO demonstrates the power of the Methodology's premise since 1981 (Basic Manual). Horses ranked an even THIRD have the greatest LONG SHOT Potential. They pick up the pieces when contenders ranked 1st and/or 2nd fail to live up to their numbers.

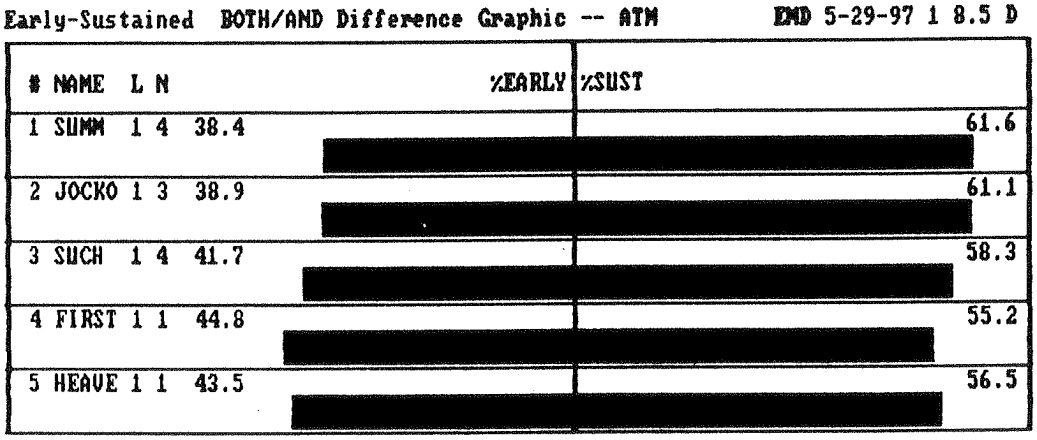
Copyright 2008 SartinMethodology.com - Not for Resale

THE EARLY-LATE DIFFERENCE & BOTH/AND Graphs

These should always be viewed in combination with each other.



E-L DIFF shows the Degree of Difference between a runner's Early Energy Expenditure and its Late. It displays WIN & COUNTER ENERGY. As is so often the case, the Win horse (JOCKO) and Show horse have a comparable LATE figure. SUCH runs Late but *not* Late enough to catch either FIRST or HEAV. The Place horse (FIRST) is decidedly the Counter Energy contender. HEAV also qualifies but did not fire.



The idea that horses run either Early or Late is a myth. They run both. The degree of Early-Late is the important thing.

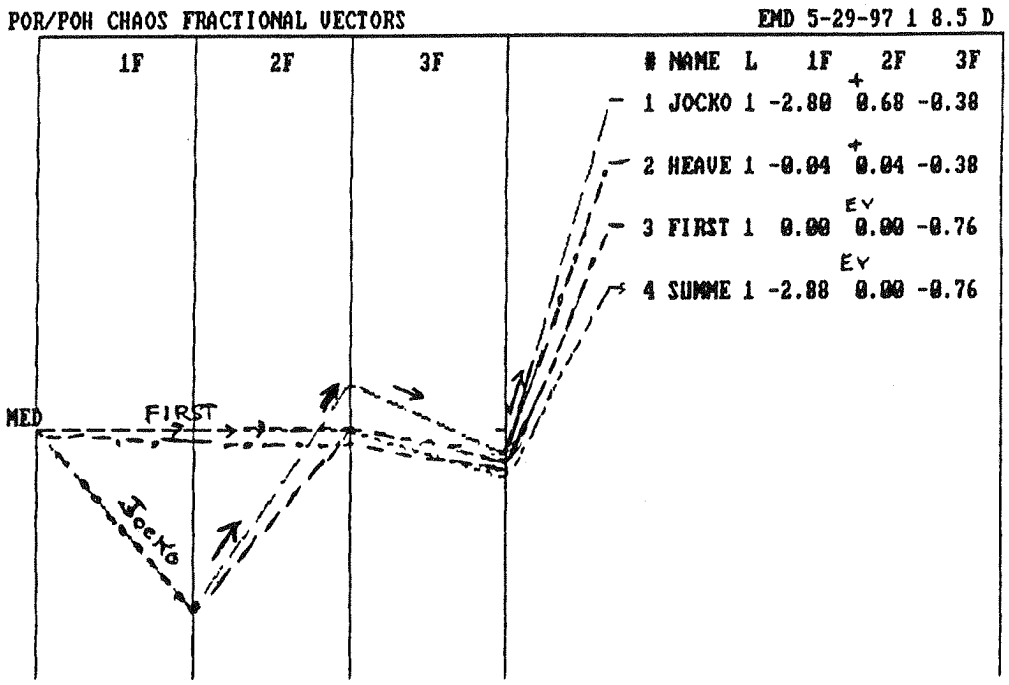
Here we see Early-Sustained Energy Expenditure in percentages. While all five contenders ran more Sustained than Early, (The Emd Profile), Win and Counter Energy are seen clearly here. The Winner and Show Horses dominate Sustained while the Place horse is the best Early.

Both these graphs are excellent tools for Profiling what Energy Factors and the degree of Early-Late that is producing winners and in-the-money finishers. Without some record of this, both graphs are less effective. WITH records they can have a highly positive effect.

THE VECTOR GRAPH

This graphs show, BY FRACTION, how a contender *moved* against the PACE of the RACE it ran against.

Copyright 2008 SartinMethodology.com - Not for Resale



While JOCKO tops the graph, this is NOT a ranking order. It merely shows that JOCKO made the BIGGEST MOVE against its pace race: +60 in Fraction 2. ALL horses have a minus in their 3rd fraction because NONE of them WON their paceline race. JOCKO is on top because it had the least (tied with HEAVE) 3-f minus. I can think of no graphic or numerical display that could display this fact for a horse BEATEN by 9 full lengths. What we can see here that is overlooked by "popular wisdom" is the fact that despite its final beaten lengths, JOCKO, tied with HEAV for the FASTEST final fraction of ALL 10 contenders (before HIDE) in this race. (See FPS/Energy Screen).

Copyright 2008 SartinMethodology.com - Not for Resale

THE PACE GRAPH

This projects the potential Pace of Race and how each contender might run against it. It projects a final time of 1:45:4 (.74 tenths). The race was actually run in 1:44:3. Trying to accurately project the Final Time of a race is a sometimes thing. It is also meaningless for any purpose except bragging rights. I find it the LEAST meaningful of ALL graphs. Others love it. I only hope it is helping them win and not misleading them

Pace Match Up Graphic -- ATM EMD 5-29-97 1 8.5 D

# NAME L N T	1C R	2C R	FT R
PACE	48.40	113.60	145.74
1 SUMM 1 4	49.83- 4	115.78- 4	147.70- 4
2 JOCKO1 3	50.03- 5	115.34- 3	147.07- 3
3 SUCH 1 4	49.76- 3	115.34- 3	148.05- 5
4 FIRST1 1	48.40- 1	113.60- 1	145.87- 2
5 HEAVE1 1	48.64- 2	113.74- 2	145.74- 1

Copyright 2008 SartinMethodology.com - Not for Resale

FIRST is the dominant pace setter in First and 2nd Calls. It is virtually tied with HEAV at the finish, separated by just .13. JOCKO moves from last in 1-F to 3rd at the second call. Its final time is projected as third best. SUCH is significantly far behind at the end, so SUMM comes up a strong fourth. The 1C and 2C numbers have more meaning than the final time (FT). This graph is BETTER for eliminating NON-contenders than it is for predicting finish.

EXAMPLE:

Pace Match Up Graphic -- ATM EMD 5-29-97 1 8.5 D

# NAME L N T	1C R	2C R	FT R

9 BORN 1 4	49.99- 8	116.76- 8	148.80- 9

Using the PACE GRAPH as an contender eliminator, it is clear that the ALL horses should be eliminated except HEAV, FIRST, JOCKO and SUMM. Those who are more timid might keep KODY and SUCH until they are clearly eliminated by other graphs and ratings.

Following our prescribed method for selecting pacelines, proper use of HIDE and the clarity of this combination of graphs, should make every user a winner.

Failure to follow our explicit paceline selection guidelines, refusing to look at more than one line per horse and NOT making optimal use of the HIDE feature, are primary reasons for failure. The most prevalent secondary reason is stubbornly wagering on the top 2 NUMERICAL choices and not taking advantage of overlays clearly isolated by double digit BOTTOM LINE rankings and BETTING LINE Odds Projections.

A BRUTAL LOOK AT TRACK CLASS ADJUSTMENTS

There has **never** been a completely accurate Track Class chart. Not from us, from American Turf Monthly or any other source. Such charts are based on a combination of Purse Values and Claiming Level performance. Under given circumstances and at certain levels, any horse coming from a good (Plus) performance line can win almost anywhere. This applies more aptly to horses coming from Track Levels 4 on up. Horses from under Level 4 who move up to Level 1 tracks have little chance and deserve a penalty.

Having thoroughly researched the matter and sadly noting that too many clients are making arbitrary manual adjustments based on the old Track class level chart, I submit the following revision. The caveat is ALWAYS GLEAN FROM YOUR ACTUAL RECORDS at what levels horses from lower Track Class ovals can ship evenly to YOUR track(s).

TRACK CLASS LEVELS (revised)
for our purposes only

LEVEL 1 (0)	LEVEL 2 (–2)	LEVEL 3 (–3)	LEVEL 4 (–4)	LEVEL 5 (–5)
	Adjust with caution & only at certain levels			
AQU	AQU (inner)	CALDER	DELAWARE	All Others
BEL	ARLINGTON	EMERALD DOWNS	ELLIS PARK	
DMR	BAY MEADOWS	SPORTSMAN'S	HASTINGS (Can)	
HOL	CHURCHILL		PENN NATIONAL	
SA	GOLDEN GATE	LONE STAR	PHILADELPHIA PK	
Sar	FAIRPLEX	(New -	REMINGTON	
	(except Fair Track horses)	subject to further tests)	RIVER DOWNS	
	FAIRGROUNDS		ROCKINGHAM	
	HAWTHORNE		SUFFOLK	
	HIALEA		TAMPA BAY	
	LAUREL		THISTLEDOWN	
	LA. DOWNS		TURF PARADISE	
	MEADOWLANDS		YAKIMA	
	MONMOUTH		(when shipping to	
	OAKLAWN		another NW track)	
	PIMLICO			
	WOODBINE			

There will be disagreement with these levels; there always is. Just let your Win/Profits and not your preconceptions be your guide as to whether your disagreement is valid.

ANOTHER REMINDER: Do not make manual Track Class Adjustments based solely on this chart. PRE-qualify horses based on their performance and keep records showing at what levels horses ship evenly to higher class tracks. For example, most mid-level Claimers from Bay Meadows and Golden Gate ship evenly to corresponding levels at S. Calif. tracks.

Copyright 2008 SartinMethodology.com - Not for Resale

YES, you can do mile 1/4 races.

There will be some so-called handicappers who might dismiss AMERIQUE on the basis of comparative class or because it has only won a Mdn Special Wt. Compare each contender's TURF earnings (check marked). SHAMIR is high, GOING 2nd, TAM 3rd, and the winner 4th. Don't confuse Mdn Special Wt. with Maiden or Mdn Cl.

Vic Palermo

Vic is a master handicapper who won't bet on any horse with odds of less than 4 to 1. His skills make it possible for him to make all necessary adjustments in his head before going to his computer. As a result he did his races Raw. Since very few of us have his uncanny handicapping abilities, we include Shane's readouts of Vic's SPT races, done as prescribed for the majority.

SPT - 04/13/97 - Race 5

1 Mile 1:36:00 CLAIMING. Purse $15;000 (plus $5;400 IOA for ICF). Fillies and mares; 3-year-olds and upward. Weights: 3-year-olds; 113 lbs. Older; 121 lbs. Non-winners of a race at one mile or over since March 13; allowed 3 lbs. Of such a race since February 13; 5 lbs. Claiming price $12;500. [Claiming races for $10;000 or less not considered.]

The Fallacy of Mainstream "Recency" Rules

The old "Always use the last line" rule has been exploded by us since 1975. More recently, horse racing's top research organization, SportStat, released these figures proving that using the best of last three races was a superior technique regardless of rating service.

Last Race

Top DRF SR + Var. - Last Race

Num	Exp Win%	Act Win%	In Mon%	Avg Odds	Win ROI
1,636	21.55	21.94	52.38	5.84	-0.17

Top Beyer Number - Last Race

Num	Exp. Win%	Act Win%	In Mon%	Avg Odds	Win ROI
1,557	25.73	25.88	58.77	3.55	-0.20

Bloodstock Speed Ratings (Bris)

Best Last Race Figure

Tracks	Num	Avg Odds	Exp. W%	Act W%	Act P%	Act S%	Win ROI
Hol	225	4.25	24.36	25.33	39.56	59.56	-0.23
Others	768	3.94	24.24	24.22	41.54	57.16	-0.17

Best of Last Three

Daily Racing Form Speed Ratings + Track Variant

Best Figure of Last Three Starts

Tracks	Num	Avg Odds	Exp. W%	Act W%	Act P%	Act S%	Win ROI
Hol	232	9.01	18.83	23.71	39.22	50.86	-0.04
Others	826	6.60	19.72	21.31	36.80	49.64	-0.04

Beyer Speed Ratings

Daily Racing Form

Best Figure of Last Three Starts

Tracks	Num	Avg Odds	Exp. W%	Act W%	Act P%	Act S%	Win ROI
Hol	225	4.58	24.27	26.67	43.56	57.33	-0.10
Others	745	4.26	24.03	24.43	41.21	55.84	-0.17

Bloodstock Speed Ratings (Bris)

Best Figure of Last Three Starts

Tracks	Num	Avg Odds	Exp. W%	Act W%	Act P%	Act S%	Win ROI
Hol	240	4.93	22.79	24.58	40.42	52.92	-0.18
Others	778	4.34	23.85	24.42	40.23	56.94	-0.16

ALL these stats were based on using the LAST or BEST of last three with absolutely no distinctions as to distance, surface or class. Making such distinctions produces a profit when using Racing Form SR+V and making no adjustment for DV's of 16 - 17 - 18. Most important, the aver. Win odds are considerably higher using best of last 3.

• Everything You Know Is Wrong: A Non-Linear View of Racing

Speed Ratings *VERSUS* Compounded Ratings

by Bob Pandolfo

Some figures don't tell the whole story.

"...a Ph.D. by the name of Dr. Howard Sartin. Sartin got involved with handicapping almost accidentally. As a psychiatrist*, he was given the task of helping addicted horseplayers stop their losing habits. He decided that the best way to do this was to turn them into winning horseplayers.

He developed a feet-per-second formula (also known as velocity ratings) which has come to be known as "The Sartin Methodology."

Not only did the Sartin Methodology break each horse's performance down to feet-per-second intervals, it also produced the first compounded ratings.

*that should read psychologist

Pandolfo then goes on the describe some of our compounded ratings from the Phase III. Fortunately for us, he does not do so accurately. Like so many authors after him he confuses Factor X with Sustained Pace and juxtaposes several other factors.

However, his basic thesis is well founded. In Phase III, I produced two **Compugraphs**, one showing X's for each contender's position by **Fraction**. The other did likewise with **Compounded Rating** positions. At that time these were limited to **Early Pace, Sustained Pace, Late Pace, Factor X, Factor W, and True Speed.**

During those years when Phase III dominated the Methodology, client reports clearly demonstrated that the Line Scores from the **Compounded Compugraph** produced far more winners than those from just the basic fractional readouts.

This continues to be the case today. With SYNTHESIS we have a new array of **Compounded Ratings** offering added corollaries that provide users more security in making wagering decisions. Pandolfo's statement about our using feet-per-second formula is **yesterday's** news. Ratings are **no longer** f-p-s. They are derived from the highly intricate mathematics of Chaos physics and are more finite and create clearer differentials between rankings.

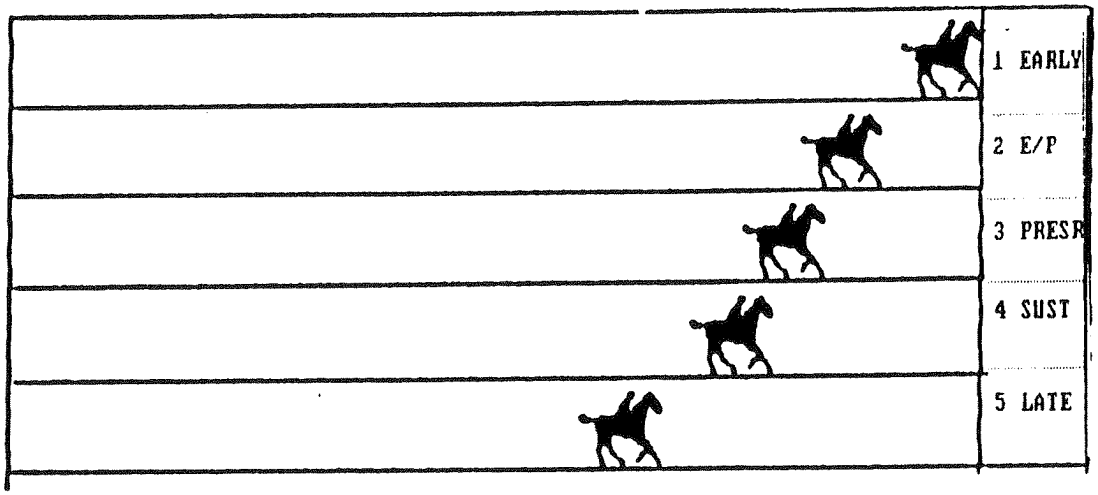
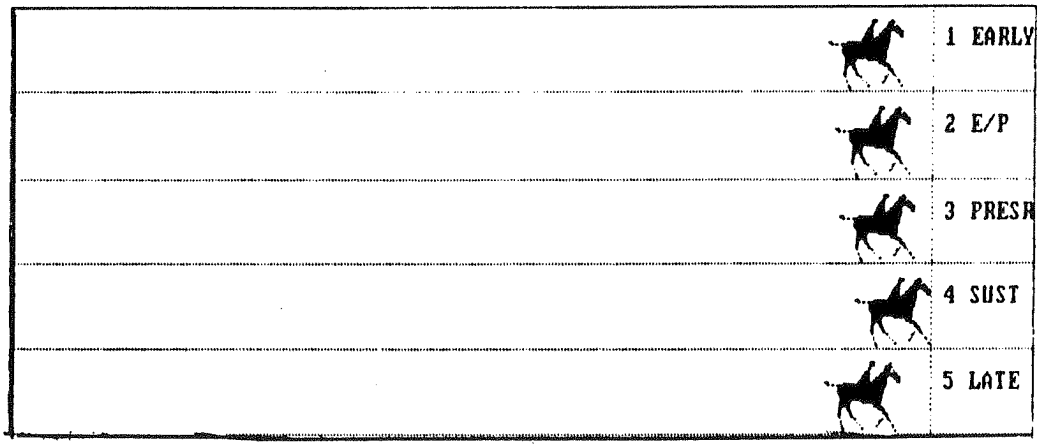
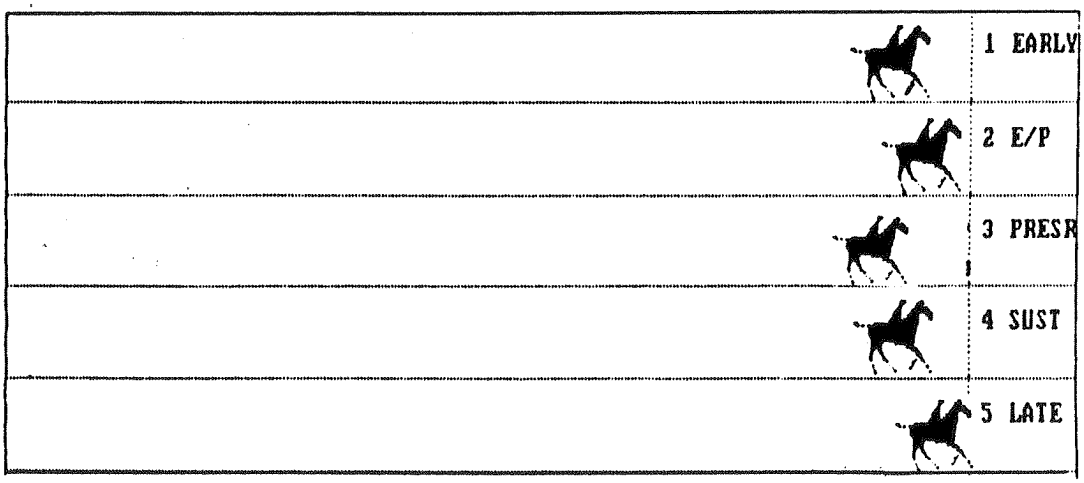
THE MATCH UP







Copyright 2008 SartinMethodology.com - Not for Resale

+, 0, (+), and MATCH UP Questionnaire

Name of Horse _____

1) It can only win when it can go wire-to-wire against slower, 3rd Fractions

❑ Y ❑ N

Time of the 3rd fraction by which it can be beaten? _____

2) It can only win when it gets the lead by the second call

❑ Y ❑ N

3) It is a 1 move horse that only does well when gaining in the stretch

❑ Y ❑ N

4) In a GOOD + or (+) race it does not run 3rd fraction at TODAY's DISTANCE and SURFACE faster than_____

5) When coming from a + or (+) race it does not run 3rd fractions faster than_____

6) Ergo, it always fails when running against competitors who run 3rd fractions faster than_____

7) Avoid betting a contender to win unless it faces a match up in which the 2nd call projects as no faster than (number you fill in)_____

8) Based on its ESP and proven Closing Fraction ability, the 3rd Fraction of its nearest competitor must be slower than_____

Use numbers that you filled in above to determine any "Early" horse's chances today.
