 **THE SARTIN
METHODOLOGY**
1390 E. 6th Street #5
Beaumont, CA 92223

STATEMENT OF POLICY

The Sartin Methodology is based in Psychotherapy and its goals are NOT directed toward fostering the illusions or delusions of gamblers seeking magic solutions for picking winners. We are primarily a healing arts organization dedicated to providing an alternative solution to mainstream psychiatry's prescription of total abstinence for non-winning handicappers. Our slogan is - and always has been -

"THE CURE FOR LOSING IS WINNING"

NINTH ANNIVERSARY ISSUE. Time does fly and racing *does* change. For twenty years, our ninth with the Follow Up, we have dedicated ourselves to keeping abreast of those changes and staying several years ahead of the field in demonstrating to our subscribing clients how to successfully **DEAL** with the changes. I figured the total number of accumulated Follow Up pages published since we first went to press. Do you realize that they add up to **TEN** full 340 page books? Wow! Just my own offerings alone add up to 3000 pages.

This issue will dedicate a lot of pages to a commentary with a multitude of example races that I trust will be most helpful to you, not only for winning races with short fields and long prices, but all other kinds of races with long and short prices.

The unique thing about all of our four call programs is that, when properly used, they do not distinguish between favorites and higher paying contenders. They are designed to isolate winners and in-the-money paying contenders. But more importantly, no program will do this unless *you put those horses in your computer*. This is why Quad-Rater works so well with Synergetic Match Up and Thoromation. It forces you, providing you accept the guidelines in its manual, to put in the kind of horses that our research proves pay the *higher* mutuels.

This 9th Anniversary issue is quite lengthy, so I'll cut this column down with a reminder that there is still room at our upcoming Las Vegas Workshop March 11 and 12. There is only room for a limited number since this is a **WORKSHOP** (emphasis on **WORK**). This word, **WORK**, left a lot of clients **DISinterested** - but if you want a truly hands on working experience, take advantage of this one. Let us know **NOW** if you plan on attending. Call the office if you need details 909-845-5907 from 1 to 3 pm Pacific Time or leave a message on the machine and we'll send you a flyer asap!

Some Words from Shane...

If you're calling the office to set up a phone appointment with me, (problem with your computer, printer or printer setup, or need help with any of our programs), please be ready with your computer on so that we can work out the problem without delay.

If you need information on the AODDS program, please call Jim Bradshaw at 918-627-7161. Jimmy handles ALL aspects of the AODDS program.

If you need help or have questions pertaining to Tom Brohamer's Modern Pace Handicapping program, please call the technical support program given with the program. If you have misplaced that number, we will gladly give it to you.

QUAD-RATER QUESTIONS:

We have had some phone calls from folks using Quad-Rater who are experiencing problems with the program going to black and white, seeming to "crash" or occasionally coming up with an error message while using the program. A few people have even sent their Quad program back thinking it defective. I always test these returned programs to find out where the problem lies. In most cases I will find that the program disk has too many files copied to it (.API, .RAC, OR .APV files). In some instances the write protect tab on the 3.5 disk is open (which means it is 'write protected and it will not accept any data to the disk). With the 5.25 disk, if you cover the notch on the right side with tape, it will be write protected. Quad-Rater requires that you DO NOT write protect the program disk while in use.

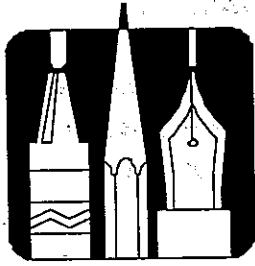

Here are some other common questions regarding Quad-Rater:

Q: Quad-Rater is not working properly...

- A:
- 1) Are track records entered? If not, enter records for each track you are working with.
 - 2) Are there too many races saved to the disk? If so, use the CLEAN UP feature to delete races you don't need anymore. If you have over 40 races, it's time to CLEAN UP. (If you have the installable version of Quad, this is not a problem - depending on the size of your hard drive of course.) If you want to keep old races, you can copy them to a "data disk" for future reference and then use CLEAN UP to erase them from the Quad disk.
 - 3) Is the write protect tab open (3.5) or covered (5.25)?
 - 4) Is the printer ON and ON LINE? If not, the program will "crash" when trying to make a printout.
 - 5) Downloaded races, then copied to Quad, but the program says "Race Not Found"? Re-enter distance, surface and purse information. If race was copied properly, pacelines should then come up.

A COMMON PRINTER PROBLEM:

If you are having trouble with printouts and you have a laserjet or inkjet type printer, look in your printer manual (or call the manufacturer) to find out if there is a command you must use to get the proper printouts. In some cases the printer will have DIP switches that can be configured so that you can print graphic screens such as bar graphs, pie charts, Thoromation and PrePlay screens, etc. Setting the printer to EPSON mode is recommended.

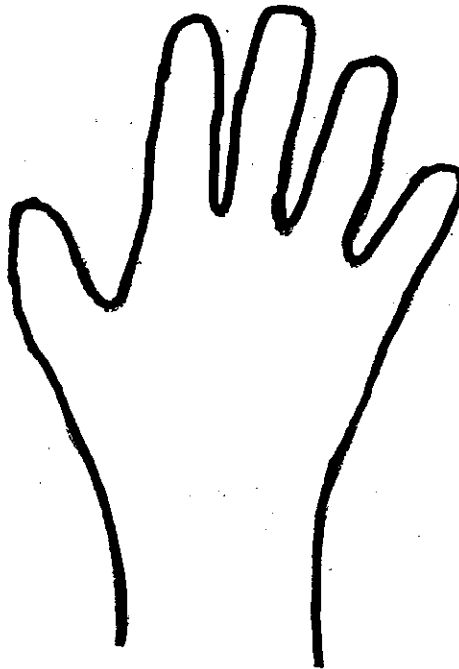

FROM THE
**Editor's
Desk**

Here is a procedure that I have been using for some time and is very effective for decision making. I'm going to explain the principle in a most basic way and take the risk of losing readers of this article. Some times when an idea is explained too simply a more sophisticated individual will not even read the material. So be it.

So what's the idea?

The idea is very simple. Please look at the palm of you hand with the five fingers extending upward

Think of each finger as representing a different horse. Each of these five fingers (horses) are contenders in the race.

As we look at this group of five fingers, we ask: what are the chances that any one of these fingers represents the winning horse? The answer of course is one chance in five. That's only a twenty percent chance of being correct in finding the winner.

Conversely, what are the chances that these fingers (horses) represent losers in the race? And the obvious answer is that four of the five fingers are representing losing horses. That is an eighty per cent chance of identifying a losing finger (horse)

I say chance as though what we do is mere chance or random, that is, just luck. Of course the factors in the programs are anything but chance and are the most powerful separators of horses in handicapping.

We've all had the experience of having too many horses in the computer and in our brain. Too many horses are like noise. When the noise level is too high nothing is heard and the only way to hear is to reduce the noise level.

Thinking of the example of the fingers of your hand, that's 4 to 1 odds in favor of identifying a loser and only a 1 in 5 odds of picking the winner. The safety of eliminating horses that Your Evaluation of factors deem as "Losers" one horse at a time, is definitely in your favor. Being less than precise you will probably not throw out the winner. The risk of trying to pick the winner at this stage of decision making is four times the risk. Knowing this, now figure your chances when betting TWO horses to win.

A close friend said this:

*When trying to find a needle in a haystack
It's easier to see the hay than the needle.*

A note from the office:

This request pertains to letters that contain orders and questions in the same envelope. Separating the order from questions on separate pieces of paper is appreciated and expedites the handling of the order and the questions.

Thanks: S.T.

Oh Oh!!

One of the east coast states may cause the Connecticut O.T.B. and our clients some trouble. It's reported that the state is asking for a court ruling as to whether the state has the power to prevent its citizens from being able to bet by phone into another state (Connecticut).

I've feared something along these lines might occur. Many clients who live in areas or, because of their own personal limitations, can not attend races or satellite facilities have a chance to partake in one of the freer markets of speculation: horse race handicapping

Please let them continue.

New York and Kentucky have telebetting. These states could be affected. I hope not.

Looks as though the much publicized information age is coming our way more and more. This mornings L. A. Times sports section on the horse racing page has a box called, "Horse Racing On-Line." I called and got a recording explaining the service was through Prodigy, an on-line commercial service. The newspaper item says that available through your computer you can get information on horse racing at Santa Anita, two reporter's coverage of Santa Anita the night before the races as well as same day results, jockey and trainer standings, stable notes and a special section on betting systems. *(Not touting their info - just for info only.)*

And in the mail from Autotote, who runs the Connecticut OTB, is more to let us know that the information age is alive and well.

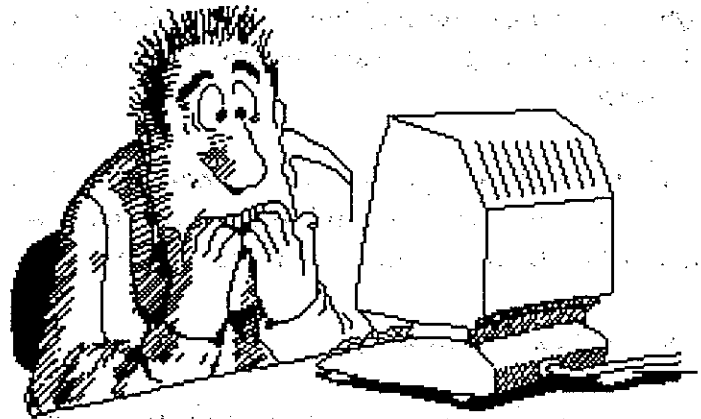

A new service for subscribers to the telebetting service can now get fax on demand. I've had some experience with this concept. The way it works is that you need fax receiving capabilities either in you computer or a regular fax machine. I've called a printer company when I needed help. The printer company had a menu on their phone line from which I selected the information I needed. A short time later my fax machine spewed out pages of information from the printer company of which I was grateful.

This new service does the same thing for \$15 a month in any month you would use it. Any month you didn't use the service, no charge. That \$15 a month charge is for unlimited service.

The service says this includes: overnites, recaps & previews, thoroughbred programs with Daily Racing Form past performance lines, harness programs with USTA past performance lines and results recaps. The number is (203) 821-3100.

THE COMPUTER COLUMN

by Spencer Toner

What do you do when your computer goes down. Well, I'm about to find out. I was working with the new sub-notebook when, without warning, the screen goes into a pattern of the most exotic geometric crazy quilt pattern you'll ever see. The computer wouldn't re-boot by hitting the three finger salute (ctrl, alt, del). Turning the computer off and then on again (a warm boot) failed also. The rear of the case was warm, not hot and I know that heat is the enemy of electronic devices. So, I let the computer cool and tried again.

"Trying is lying", says Dr. Sartin, but that's in another context, or is it?

I was willing to do a little lying to myself, in hopes that something I could of, would of, should of, would make the computer whole and O.K.. again. Nothing worked.

The inevitable happened, I shipped the computer back to the factory. The computer is in a box, in a plane on its way to Kentucky for warranty repair. Let's hope they fix it quickly. I already miss it. Gee I wonder if Maytag builds computers?

This experience leads to the problems of clients calling to say that their handicapping program broke or doesn't seem to run properly. Computers are complex and using them for some time you learn what to do when they act up. In fact they are so complex it seems practical to just get them running again rather than learn all the why and wherefore of computer science.

When one of your handicapping programs from the Methodology breaks. (Breaking, I would define as locking up and the computer not responding to input from the keyboard or something abnormal appears on the screen etc., etc.) and you want to know what to

do. It may not be the fault of the program. You may have a bad file. Possibly some data was entered incorrectly, or a race file with errors was loaded.

When this happens don't panic. Everyone has experienced what you are experiencing. When this happens I generally turn off the computer and then completely restart the computer, and restart the program. That way anything stray that may still be in the RAM portion of your computer's memory will be erased and you get to start with a clean slate. Now I load a race I have saved and was running O.K. in the past. If this works I go back to the race that was running when I had experienced the problem when the break in the program occurred. Look at the screen where the pacelines were entered and see if there are errors that would cause problems. In doing all of this you are eliminating chances that there was operator error, caused by yourself.

If all of these remedies fail, you are justified to cry "HELP". Shane is excellent at solving these problems. Calling the office and talking with Shane is then the best remedy.

Another hint. When you do call for help, have your computer on and be in the Methodology program that is giving you problems. That way you can be directed over the phone and the problem may be resolved easily. It makes such good sense when you call if you are sitting at the computer with the actual problem on your computer screen,.

There are DOS commands that keep coming up in phone conversations that tell me help is needed:

COPY;

To copy a file using the COPY command can be complex. Lets stay away from the complex and just look at the simple side. To copy a file from C:\HRACE> to a floppy disk in your A: drive you need to tell your computer what file you are copying and tell the computer where you wish the file to be copied. As an example lets say you have a race file that you saved and wish to copy this file to a floppy disk. The name of the race in this example is: SA012801.RAC The bottom line on your screen says C: \HRACE>, so type so the whole line looks like this:

C:\HRACE>COPY SA012801.RAC A:

When you hit the ENTER button the process is complete. You have copied this race file to your floppy that is located in your A: drive.

DIRECTORY:

The command DIR lets you look in a directory and see everything that is there. With the addition of two *switches* you won't be overwhelmed as too many separate files flow too quickly by your eye on the screen. There is no chance to see what was flying by. By adding the switch /P you will see one page at a time each time you hit enter. Also by adding the switch /O your files will be in order, alphabetically. So type this command:

DIR/P/O

Now everything stops with the first screen full and is in alphabetical order. Then each time you push enter the screen moves down to allow you to see the next page etc. etc. This continues until you are at the end (bottom) of the directory.

MAKE DIRECTORY

To keep organization of your hard disk drive it's necessary to put your various files in separate logical directories. I have a separate directory for my communication program which directs my modem. Another directory is called WORK where the downloaded files are sent as they are downloaded from BRIS. This directory also has a program to unzip the files since they are received in a compressed format (zipped). This directory also has the conversion programs (HAT2XTK). This directory is where I prepare to handicap and is cleaned out daily so I have a clean and clear environment in which to work tomorrow. Also there is a directory I call S for the first letter of my first name. This directory is where the actual handicapping goes on and contains the advanced programs of the Methodology. By being named with only one letter I reduce the amount of letters to be typed which reduces the chance of error.

O.K. lets make a directory. First you need to be in your ROOT directory. The root directory is where you are when you first turn on your computer as it boots up. There you find yourself looking at the C:\> prompt. As an example let's make a directory and call it WORK. The line will look like this:

C:\>MD\WORK

As you probably guessed the abbreviation MD stands for MAKE DIRECTORY. Of course the actual name of the directory can be anything you desire.

I have no idea how others get along in the use of their computer, but having the opportunity to help others allows me to realize that none of us are as so sophisticated that we know it all. There is a pretty good guarantee that things are going to get more complex. I wish they would be simpler, but that is unlikely.

Once again...

A Special Series of
Articles for Beginners and a
Refresher Course for those in need

E.S.P.

As promised in issue 48, this time we'll explore the use and value of E.S.P. - the determination of a horse's TYPICAL style of running WHEN in form and condition. This means we should concern ourselves with ESP running style ONLY when a horse rates a + (plus) or $\oplus$ (plus within a zero), as often described in previous issues. In $\bigcirc$ races we simply refer to the horse as "out of form." However, before making this distinction we must be most cautious in our determination and thoroughly familiar with our definition of a $\oplus$. It's been in several Follow Up's, beginning with issue #8, with additions detailed in #45 and #46 via the two statistically proven sources of Long Shots as described in our analysis and documentation of the Quad-Rater. However, since the Plus, Minus and Plus within a Zero concept is so vital, this column will be dedicated solely to it in issue #50.

There are two versions of ESP: The VISUAL as determined by position calls, and ENERGY YIELD ESP, as seen on all 4 call Methodology advanced computer program readouts. We have some clients who prefer the visual because they have an inflated notion of their sensory perception and cling to that notion even though it produces losses when the computerized designations would produce wins.

This is America. We have a right to free moral agency regardless of how much it may cost us. Since all of our foreign clients come from democratic nations, the same applies to them.

To the best of my knowledge only Jim Bradshaw, a precious few of his "hands on" students and Tom Brohamer have demonstrated enough "horse sense" to win with any degree of consistency using ONLY the visual ESP.

Those circumstances in which virtually *anyone* can profit from the VISUAL ESP is through their sensory perception of NEED to LEAD and ONE MOVE closers. Such determinations must be made by distance or at least Sprints and Routes. In the case of a NEED TO LEAD horse you must answer questions A & B below and let their answer be your guide. When I say NEED to LEAD, I'm describing horses that never WIN or come in extremely close UNLESS they have the lead beginning with:

Q: a) The First Call (Have to go wire-to wire)

Q: b) The Second Call (Take charge at 2nd Call and never look back)

Determining a ONE MOVE closer is as easily misinterpreted as it is EASY.

Look: Is this a ONE MOVE closer?

Position calls:

F-1	2C	Str.	Fin.
6th - Back 5	5th - Back 4.5	3rd - Back 4	2nd - Back 3

The answer is NO! The horse closed 2 lengths start to finish. This is NOT a one move closer. It is at best a Sustained Pace Presser who made 3 small moves within the race.

How about this horse?

F-1	2C	Str.	Fin.
6th - Back 6	5th - Back 6	4th - Back 5.5	First - WINS

This IS a One Move closer. It gained two positions and a half length between start and the stretch, the big move it made to win. Had it not won but came in CLOSE, the same would apply.

Here is an example that might give the best Visual ESP user trouble:

F-1	2C	Str.	Fin.
5th - Back 3	3rd - Back 3	2nd - Back 2	2nd Back - 1.5

Some VISUALIZERS would call this animal a Presser. Some an Early Presser (because it was only 3 off at the first call). Others might say Sustained Presser, and I know plenty of clients who might say Sustained.

COMPUTERIZED ENERGY EXERTION ESP

Next we'll enter some times and use the same beaten length figures for two different distances. Six furlongs and 8.5 furlongs. We'll let the computer determine ESP.

WHAT!? you say - BOTH THE QUAD-RATER and THOROMATION ESP show the 6 furlong wire-to-wire example as an Early Presser and the 8.5 wire-to-wire horse as a Sustained Presser? You thought ALL wire-to-wire horses were EARLY? NOT SO. This was the costly mistake made by some of the experts at Del Mar last meet. The 6 furlong wire-to-wire horse has a 2nd Call and Final Fraction compounding that defies the definition of *strictly* early, making its Energy Designation E/P, Early Presser, vital knowledge when handicapping this horse from Past Performance charts as opposed to after-the-fact Result Charts. In order to qualify as Early it would have to run a line with times relative to the horse we've designated as EXAM.

For those who have not been subscribing the Follow Up long enough to know what I mean by "time relative to" I mean fractions with similar time and/or percentile GAPS between velocity increments.

SUMMARY

Visual ESP is vital for determining NEED-TO-LEAD horses (and at what point a horse needs to lead) and ONE MOVE CLOSERS. Jim Bradshaw also likes it for evaluating where a horse is usually positioned when it wins or is in the money.

Visual ESP tells us how a horse ran in a PARTICULAR RACE against the specific match up that race.

ENERGY EXERTION ESP tells us how a horse, when in form and condition, tends to exert its energy in ANY race, regardless of the match up.

Any use of ESP should focus on horses that are IN FORM but it is imperative that we *never* eliminate contenders who qualify under the long shot qualifications. I've previously discussed before, but to briefly repeat, they are:

- 1) Horses who run *extremely well*, although, by sensory perception and Speed Rating, ran more slowly than others in the race (confine this to their either Winning, Placing or finishing less than ONE LENGTH behind the winner). It also applies to wire-to-wire winners *providing* they were running against horses that usually run faster than they based on previous Past Performance records.
- 2) Horses that *appear* to have run badly based on Final Beaten Lengths but who ran against an extremely fast pace. To determine this you need only compare their Speed Rating from that pace line with those of other contenders with better finishes. Certain "experts" may tell you they were only "chasing" speed. Perhaps, on occasion this is true. Yet these experts never seem to be able to explain why these kinds of horses often win and pay exceedingly high mutuels.

Understanding both forms of ESP and properly utilizing them to your personal benefit is vital to your success: not just for winning a race but for understanding win and counter energy so essential in picking place and show contenders for exotics.

And PLEASE don't hand me that old saw about how you play to WIN ONLY (I'll accept it only from Jim "the hat" Bradshaw based on friendship, not logic). But from anyone else it is a kind of logic that, based on race results from most tracks, is obsolete and profit robbing. If you're looking for substantial profit you either have to play the Exotics or, like "the hat", wager on more races than most of us have sufficient energy for, OR live in Nevada or in an area where you have enough race choices to wager only on races where your selections will pay higher odds. OR, (and this one has little appeal to most clients I talk to), make HUGE WIN BETS on Spot Plays so that the profits from your WIN ONLY philosophy will be overwhelming.

And to those who say, "I just can't seem to pick the place and show horse" my answers include 1) Hogwash. Take time to learn. And 2) Why then do you keep saying that the horses you bet to win are always coming in second or third? The #2 response group are in the best position. All they have to do is learn to pick Winners.

We have plenty of tools for that and, happily, from what I read in Vox Populi, more and more of you are beginning to properly utilize them. Now if only the rest of you would apply yourself to solutions instead of problems, we'd have instant nirvana.

Unfortunately, in handicapping, as in life, too many persons focus on their problems and not on solutions. This focus is what keeps the practice of medicine, psychiatry and even law all too lucrative. The best way to cure something is to get mad as Hell at yourself for having to go to someone else for whatever it is you want to cure.

Ever notice that people who "hate" doctors, be they of the physical or mental kind, seldom complain of any illness? And, by the same token, the person who says that he/she has "a marvelous doctor", is constantly going to that practitioner for an endless variety of symptoms? Think about it whenever you lose. Remember that movie, *Network* and the phrase, "I'm MAD AS HELL AND I'M NOT GOING TO TAKE IT ANYMORE!"

TOM BROHAMER:
***AN AID TO PACELINE SELECTION
AND DISTANCE SUITABILITY***

One of the most frequent criticisms of computer based methodologies, ours included, is the overreliance on a single paceline to predict a horses performance. The criticism is well directed. Failure to select consistently representative lines is still the most glaring weakness within our client base.

The tendency is to select pacelines reflecting lifetime best efforts or, equally bad, rating lines from unrelated distances and surfaces. Best efforts are usually not repeated, that's why they're "best" efforts. *(Editor's Note: See the basic Yellow Manual, pg 18)* The use of lines from another context merely reflects wishful thinking on the part of the selector. The latter usually produces figures that have absolutely no relationship to the race at hand. Winning a race using figures earned under dissimilar conditions is more coincidence than brilliance. Class, form, or improved conditioning, is usually responsible for winning those races. Players, especially the inexperienced, are often deluded into thinking the turf line used to win a dirt race was inspired. That kind of thinking can produce heartache down the road.

If you get the opportunity, spend some time with our most intuitive handicapper, Jim Bradshaw. Jimmy does not base selections on unrelated surfaces or distances. When betting on a sprinter in a route, the selection is based on the probable pace match-up and not the "figure" earned by the sprinter. Dirt races are not used for turf races and turf sprints are not based on figures from turf routes. In other words, Jimmy's plays are "apples versus apples" scenarios and not wishful thinking. You should do the same. Use sprint pacelines for sprint races; route lines for routes; dirt lines for dirt races; and so on. You get the idea. Don't

mix dissimilar circumstances and hope to have anything other than quicksand upon which to base a bet. There are races where lack of data forces the use of "oranges" in the scenario, but approach those with full knowledge of the weaknesses of your figures. Class, form, and general pace considerations become paramount, not the literal output of the computer program.

I'm going to outline a technique I usually present in our workshops and seminars. It is intended for less experienced clients but the feedback from all levels has been uniformly positive. Think about adopting the technique, at least until you can routinely visualize the procedure in your basic handicapping.

The drill will be to create an "apples-apples" scenario by eliminating, from the past performances, races run under dissimilar conditions. Very simply, if today's race is a fast track sprint we will line out all races run at route distances; races run on other surfaces; seriously troubled efforts; and races run on "off" tracks. We will also eliminate poor races when seriously outclassed (not just a level or two). The result should be an insightful look at performances that have real meaning under today's conditions. Consistency of performance and form cycle clarity are the usual by-products. Paceline selection, unless impractical to do so, will come from the remaining races in the P.P.'s.

A couple of examples should be worth a thousand words: the fourth at Meadowlands run at one mile and seventy yards over a fast track.

4

Meadowlands

1 MILE 70 YARDS. (1:39¹) CLAIMING. Purse \$7,500. Fillies and mares, 3-year-olds and upward. Weights: 3-year-olds, 118 lbs. Older, 122 lbs. Non-winners of three races at a mile or over since September 20, allowed 3 lbs. Two such races, 5 lbs. One such race, 7 lbs. Claiming price \$5,000. (Races where entered for \$4,000 or less not considered).

STRAIGHT TO GLORY

10-13 & 10-4. Draw lines through both of these sprints. They indicate satisfactory current form but have little relation to today's race.

6-5 & 5-17. Also eliminate these races from Straight To Glory's past performances.

4-16 & 3-22. These muddy track efforts are not relative to today's conditions.

After this bit of artwork we have four races to consider for this runner: 9-21, 8-28, 6-21, and 4-26. Paceline selection and distance suitability should be based on these races. More often than not, apparently inconsistent horses often become gems of consistency when offered the right circumstances for their races. The opposite is often true as well; consistently poor races may be exposed and the horse may be eliminated as a contender. In the case of Straight To Glory, the mid-pack sprints seem to indicate a return to form may be in the cards.

We're left with just a few races to consider and the picture is not pretty. This is a bad horse who seems to be in steady decline. Queen Of Naskra's overall record at the distance is very good but recent history suggests she's on hard times and would be a surprise.

Give this exercise a try, you may find it clarifies two very important handicapping factors: form cycles and distance suitability. The picture usually becomes quite clear and when it doesn't you'll know you're in uncharted territory.

VOX POPULI

THE CLIENTS SPEAK

At the outset the Vox Populi segment of the Follow Up kind of reminded me of author Norman Mailer's "Advertisements for Myself." Indeed, it was the policy of a former editor to never publish favorable letters because, in his mind, they inflated the ego of the recipients but did nothing for the reader. My daughter, Mary, convinced me otherwise, as have countless clients who have been so inspired by the words of fellow clients that they grew in stature both as handicappers and as human beings. That is the sole reason for Vox Pop. To let you know from the pen of others that handicapping can be and is being done with consistent success by your peers who are no brighter or less bright than yourself.

Rather than serving as a boost to my personal ego, these letters feed my sense of humility. Each, in its own way, is a testimonial to the true purpose of my original intent: To equate the challenge of handicapping success with success in life itself. You, not I, are meeting that challenge. So these letters are a tribute to you who have written them and you who continue to strive toward the goal expressed by the writers.

Doc Sartin

Dear Dr. Sartin,

A couple of weeks ago I purchased Quad Rater. I received it just in time to play the big Gold Cup feature at SA and caught the \$60+ longshot. I have had several mutuels in the 20's since then. I also have Entropy II and am thinking about investing in Synergetic Matchup II and using all three programs in concert as set forth in the last couple of Follow Up's -preponderance of evidence...

Thanks for all the good work you and your staff has done.

A SECOND NOTE A FEW WEEKS LATER REGARDING THE LAS VEGAS 11/94 SEMINAR--

I had a great time and Glen Connolly explaining his races using Quad-Rater was most enlightening. Also Brohamer and Bradshaw explaining the matchup was the best I've ever heard it explained. Phil Gowens and Ginny Butler were very inspirational...

Sincerely,

CS, Nevada

Dear Doc,

I just finished reading FU #47 and was surprised to see my statement about the early-late "stuff" being one of my main problems. In fact, D.M. called me from Ohio to tell me about it. Since returning from the Meadowlands Workshop I have completed 5 cycles with a Win % of 65% and a Win Price Average of \$9.73. While the Win % may not be as good as other clients, it represents for me the first time that I have been at a consistent level. I've gone from a high of 70% to a low of 55%. What is also important to note is that these cycles included races from Del Mar, and the Meadowlands (2 tracks which I do not model). I also must restate to you that the time you gave me in Baltimore talking about the psychology needed to win was a great help. I still play the tape I made after a bad day. I hope other clients listen to you about both the psychology of winning and the early-late dichotomy, because they really work. Also, I thought I'd let you know that the Quad-Rater with Thoromation is outstanding. As you have stated, it really helps non rocket scientists like me win. Keep it up.

Thanks for the help,

T.G., New Jersey

Dear Jim,

I would like to order the AODDS program... I would like to extend a special thanks for your efforts in making us all winners. Since I have been downloading I haven't had a losing day. I have noticed that the Match Up is only getting the contenders top five 82% of the time, but out of this I have the winner top 2 76% of the time. It is truly amazing for a guy who was a loser for many years.

Many Thanks,
DLC, Washington

Dear Howard:

Just received the latest Follow Up. This one is extremely good (but they all are).

Thank you for such a wonderful Holiday message. It touched me deeply.

...I received Quad Rater in September. I was very excited upon receiving this program as I heard so many positive things.

The first race I invested in paid \$27.70. I was on top of the world. That weekend I invested in 32 races and won 24 for a win percent of 75 with an average mutuel of \$14.65. (I guess beginner's luck, ha ha).

I was quite confused at first, Quad-Rater didn't match Thoromation and vice versa.

I kept it quite simple and just plain common sense.

The following week I spoke to Shane - he gave me some very good pointers. Also that week I spoke to Ginny (Butler) about Quad Rater in conjunction with Thoromation. This was an extremely helpful phone session.

Shane and Ginny are an extreme asset to the Methodology. Thank you Shane and Ginny.

The second week my win percent was 62 with an average mutuel of \$15.20. This made me work harder to get my win percent up.

The third week I was really getting to understand Quad Rater. Each week following got better.

From the day I got Quad Rater till the Breeders Cup, I invested in 196 races and won 141 for a win percent of 71.9. My average mutuel was \$13.21 after receiving Quad Rater.

I am enclosing an example that paid a whopping \$95.80, triggering a \$803.20 Daily Double and \$446.80 Exactor.

It's been a long season, thank you and your people it's been a very SUCCESSFUL ONE.

The best to you and your family in the up coming year.
Seasons Greeting

D.M., British Columbia

DOC'S COMMENT: He learned to profitably use Quad-Rater in concert with Thoromation - so can you. See article, this issue.

Dear Doc:

If you'll think back about two months, you'll remember that I came to Beaumont, my handicapping tail between my legs, complaining that I had a deep-seated distrust of numbers (I'm the son of a mechanical engineer - calling Dr. Freud!) and as a result, didn't trust the readouts from my KGEN/EXDC program. I'd read about the Quad-Rater program in several issues of the Follow Up, and I don't know why but it didn't seem as daunting. You gave me a quick spin around the program. I bought it and dashed out the door. And this is what has happened since:

I'm winning. Winning like crazy.

I saw you on a Friday. I went to Las Vegas on Saturday. Spent two days in the racebook at the Mirage. Walked out with fifteen thousand dollars. Putting it simply, in two days the program paid for itself something like seven hundred times over! I thought to myself, "This was a fluke. Couldn't happen again." Went to Vegas two weeks later and won another fifteen thousand dollars.

Doc, I can't say it any other way. The program is incredible! It's like it's given me x-ray vision. Now I can look at past performances and see things that aren't visible to the naked eye. Yes, I know there's no such thing as a computer program that's going to pick winners for you, but Quad-Rater points me in the direction of winners with amazing regularity. Honestly, it's gotten to the point that I can't imagine not running a race through my computer before wagering on it. That's right - this from the guy who doesn't trust his readouts!

Congratulations on a wonderful program, and thank you so much for helping me to take charge of my handicapping. I don't know how much longer I'll be welcome at the Mirage - but there are other racebooks in Vegas, aren't there?

All the best to you and yours in the coming new year.

Take care

Warmest regards,
P.T., California

Dear Doc,

It was a pleasure seeing you again in Oklahoma City. As always I find your seminars inspiring and very informative. It is always good to learn from the masters – you, the Hat and Tom.

As I promised you, here is my report of using Quad-Rater at Remington Park on Sunday, for the horse with the EP Dream Race–

TOTAL RACES	9
WIN	4
PLACE	2
SHOW	1

When I originally did the 10th race, I did not include the winner, *Timeless Design*. Had I followed the instructions for Quad-Rater I should have included him. I re-worked the race including *Timeless*. He has the EP Dream Race! So the score should have been:

WIN	5
PLACE	2
SHOW	1

Here are the race details:

RACE	# HORSES INCLUDED	EP=0.00	CIGAR GRAPH
1	4	SHOW	AUTO
2	4	WIN	AUTO
4	7	WIN	AUTO
5	6	PLACE	AUTO
6	5	0.	AUTO
7	6	PLACE	AUTO-S
8	4	WIN	AUTO
9	5	WIN	AUTO-S
10	6	WIN	AUTO

I have included a print-out for each of the above races for your review.

Since returning from Oklahoma I have started using Quad-Rater at Hawthorne. As of this writing I have only handicapped one card. The horse with the EP Dream Race did as follows:

TOTAL RACES	7
WIN	2
PLACE	2
SHOW	1

Let me know if you would like me to send you more Quad-Rater reports...
DG, Illinois

Hi Doc,

I'm pleased to write to you. I'm a great fan of yours. Doc, let me tell you a little about myself. I have been a casual horse player my whole life. I would go to the track 4 to 6 times a year and lose. I was begging to win.

I've been picking 64% winners with the Sartin Methodology - betting two horses, which I learned from Tom Brohamer's book. I know the Sartin Methodology very well: feet per second, velocity numbers, % early. My strong point is picking pace lines. Doc, when I do something I go at it 100%.

I'm still a casual player one to two times a week, but I plan on taking an early retirement soon and plan on becoming a full time player. Doc, I would like to thank you for the Sartin Methodology.

Thank You,
GF, New Jersey

Dear Howard:

I spoke to A.N. from Vancouver the other day. It sounds like Hong Kong racing is coming along nicely. We agreed on many topics in the Methodology. The one we agreed most on is how generous you are in your heart, mind and soul.

You've made my life a new and wonderful one. I have a lot more fun and happiness now with a lot more freedom. This is the time to give back to you. If you ever need any research or testing of new or old programs on my bull ring or a mile track or just anything in general, please let me know.

Thank again,
D.C.M., Canada

Dear Doc Sartin,

I am a great believer in all that I have ever read in *The Psychology of Winning* in the Follow Up and if you feel that some telephone therapy is or may be in order I would be most appreciative of any input from you. I only get to my mail box once a week, on Mondays, so please keep that in mind in any response you may make.

Thank you all at PIRCO for all of the help you have given me in the last two years.

Sincerely yours,
W.A., New Hampshire

Dear Sartin Methodology Instructors & Staff:

The other day, I had the pleasant opportunity to speak to Shane with a question regarding the basic manual and would like to thank him for his assistance. As I mentioned to Shane, last summer was my first at handicapping and I've probably been to the races a total of ten times. Most of those were harness races since the evening post time makes it easier to attend the harness races than the Thoroughbreds at Thistle-down (which has a 1:00 P.M. post time). In any event, partially applying your methodology (I don't have it all down yet to the point where I can at least muddle my way through a card using everything in the basic manuals), to an evening's races of paper betting, proved very effective. I treated the harness races as mile routes, used the 1/2 mile call as the first call, and used the calculations to convert times to FPS, %E, %L total energy, AP, and SP, and hit seven of twelve races, i.e., 58%. I feel, as the saying goes, "that ain't too shabby" for a rookie. I used your principle of betting two horses to win, %60-%40, and had a paper ROI of 22.5%. I also bet every race for the practice. A couple should have been passed.

In any event the material is so fascinating, I felt compelled to drop you a line and let you know. Since it will be a while before I can afford to take afternoons off to visit the TBs on a daily basis, it will be necessary to continue to visit the Standardbreds. I hope I'm not going too far afield by applying the methodology to the buggy races. If so, I'd appreciate you letting me know.

S.L., Ohio

DOC'S COMMENT: It was from Buggy Races that all original Pace Concepts were derived.

Dear Doc,

Once a year I get to send you \$87.00 for a first class mailing renewal of my subscription to the ever popular Journal of the Sartin Methodology, more commonly known among us common folk as THE FOLLOW UP.

I look forward to receiving each and every FOLLOW UP as if it were the daily CONGRESSIONAL RECORD. The primary difference is that one is crammed full of horse manure while the other is crammed full of horse sense.

My compliments to you, the Publisher.

A.C., Washington, D.C.

Dear Doc Sartin:

I can tell you, unreservedly, that 1994 was my best year betting on horse races. Please feel free to bask in the glory of your achievements, as I am doing, and of course leave a little bask (a basket?) for all those who helped us achieve our goals. What a great feeling!

It's time for me to get some new stuff! As well as extending my subscription to the Follow Up for another year, please send me the upgrade to XTOR version 2.0 and the new Quad-Rater program all on 3.5 "floppy disks. Enclosed please find \$335.00 US.

All the best, personally and professionally, for 1995 and beyond.

Sincerely,

B.D., Ontario, Canada

(His wagers were at Calder and Woodbine)

Dear Dr. Sartin,

Monday morning as I was beginning to feel good about my grasp of "Sartinology", I had the thought that in the Star Wars episodes had displayed an allegory about "the Force is within YOU."

Having attended the last three Beaumont seminars (they have all been wonderful, helpful and each seeming better than the former), I left the last (workshop) with the feeling that I had accomplished something special. Having seen you Having seen you, David Barrios and Phil Gowens...is to be exposed to practitioners of the Force. Having seen and heard you, The Master, (amusing that you have a resemblance to Alec Guinness in both appearance and role) I am encouraged to subconsciously hear you say "Use the Force, Gordon!" The parallels to the methodology and Star Wars are numerous. We all now the names of the knights of the "dark force". Other parallels are electronics as our assistants and the role of "energy".

God Bless you, Dr. Sartin, for your love and tender care of we student knights. It is the thrill of a lifetime to be associated with you. Many emphatic thanks for insisting that we subscribe to the Follow Up. I immediately started purchasing current back issues and am learning rapidly.

Thanks for Spencer Toner. He is a fresh breeze of humility, and a great encouragement to stick with it and continue learning. The Follow Up is a genuine teaching tool.

GT, California

Dear Howard,

I want to thank you for the insights you gave me during our talk...I have made the (self-talk) tape as you instructed and played it last night. I believe you when you say it is not the programs but the psychology of winning that actually counts. If your help wasn't enough, as fate would have it, I had the pleasure of riding home on Amtrak with Bert Mayne. It was almost eerie how as we talked he repeated the same things as you did especially about the so-called experts. It is amazing that without talk of pace lines or readouts I now have the way to go. I don't know how I was fortunate enough to be in the right place to get all of this insight but I surely will be using it. ... Thank you for taking the time to help me

Sincerely,
TG, New York

Dear Dr. Sartin:

I want to tell you how much I enjoyed the seminar you put on in Oklahoma City the first of October. You were everything I imagined you to be—and then some. Tom Brohamer was kind and approachable and the "Hat" was as he has been described in all your writings. But, I want to express my undying gratitude for the time you spent with me, in YOUR spare time. I think it is laudable for someone who has such a "high profile" to spend time with the "little people". I truly believe that you consider us to be clients and not just faceless numbers.
R.D.H., Texas

Doc,

Please send me Quad-Rater.

Thank you for the may programs I've used in the past, I have made many thousands of dollars off them. I know I'll like Quad-Rater.

J.S., Nevada

Dear Doc,

Please note that because you so wisely described my ability to cash "higher paying winners, exactas and trifectas" in The Follow Up #45, you have forced me into the position of being able to uphold your opinion of me. I'm now cashing them left and right and I'm so grateful for your input into my abilities. Thank you very, very much.

Bestest,
V.Y., California

Dear Doc Sartin,

From the last Follow-Up I received the impression that you were through collecting input on Fractals and were in the process of compiling the final (?) version. However, I wanted to share some of the results from last Sunday's races at the Sonoma County Fair, at Santa Rosa. I used Entropy to narrow my selections to four and entered them in to Thoromation (EXDC). I then loaded the same horses in to Fractals. I had been utilizing Fractals exclusively but wanted to "blend" the two. Naturally, at some risk when they disagreed.

As I have done successfully before, I used Auto B, Fri E for Sprints and Alt X Fri S for Routes. The 100 ratings have been powerful in predicting longshots.

In the Fifth race the winner was 100 Early in a mile race, but rated fourth on EXDC. The place horse was fourth on Fractals but number one on EXDC (a sprinter to route conversion). The winner paid \$41.60, and the Trifecta, which I hit since both programs covered the same four horses paid \$897.00.

In the Eighth race the winner was 100 Early in a 1 1/16 miles race, but also rated fourth in EXDC. I did not have the place and the winner paid \$21.20.

In the Ninth race the winner was fourth in Fractals but number one in EXDC (another sprinter to route). The place horse was 100 S, and SP 1 in EXDC in the mile race. The winner paid \$13.80, and the \$2 exacta paid \$155.00.

In the Tenth race the winner was second Early in a sprint, with 100 in F-W and number one in EP in EXDC. The place horse was a tough call between rating third or fourth. I chose fourth and missed \$61.20 exacta, but the winner paid \$10.40.

In the Eleventh race the winner was 100 E and S. The place horse was strongly rated by EXDC. The Winner paid \$10.20, and the exacta paid \$19.80.

In the Thirteenth race the winner was a 100++ E in a mile race. Unfortunately, Entropy eliminated the place horse. However, the Winner paid \$69.00!! I had started modeling after the first race and had total confidence in placing my win bet by the time the race rolled around.

In summary, betting just the 100 horses paid \$41.60, \$21.20, \$10.20, and \$69.00. Thank you very much.
R.A., California

DOC'S COMMENT; R. A. is correct. We ARE proceeding toward the final version of Fractals. It is input like THIS and material from Steve Schmidt that will make Fractals all we hoped for.

continued next page

Dear Doc:

I have been a client of the Sartin Methodology for approximately two years now. At the time I enrolled I wasn't sure what I was getting into, but as things have turned out it was the best move in handicapping that I have ever made.

Personally, things have been tough here in the northeast part of the country and especially in the Southern Tier part of New York state. We are heavy in the defense industry with IBM, General Electric, Norvel, Links, etc. When the layoffs started we suffered greatly and even now we're still in a depression in this part of the state. I work for a utility as a designer and even we had a 25% reduction in our work force. Those of us who managed to survive the layoffs now are expected to work longer days (with no extra pay). Personally I'm forty seven years old and hope to retire in another eight years. So I put in the ten hour work days.

What this is all leading to is the fact that I haven't been able to donate the time to the sport that I really love. I live approx. 125 miles from Finger Lakes Race Track and I still manage to get there some Friday's, Saturday and Sunday. My record keeping has suffered because by the time I get home from work and do the routine things that have to get done, I'm usually whipped.

I'm one of those guy's you wrote about in issue #48 of the Follow Up, that was trying to be clever and keep my records using Lotus 1-2-3. Needless to say you were 100% correct about getting buried with so much data that it became meaningless. That's when I saw the new program that your coming out with Factor Evaluator, that should be a great help to us handicapper's that have a poor history of keeping records. Please send me a price listing for Factor Evaluator so that I can purchase it as soon as possible.

Also enclosed you will find (an order) for 1 year of the Follow Up and Quad-Rater.

Doc, you and all the great (people) in your organization have done more to advance the art of handicapping in the history of the sport than anyone else. This I truly believe. Even having limited time to devote to handicapping I'm still maintaining a ROI of 1.62 and I know I can do much better. I've been going to the track since I was 23 years old and in all those 24 years of racing I had never been able to achieve this kind of results, even tho' I have always been a pace handicapper it's like your programs are from another dimension, their so advanced.

I can usually have the winner in my tip 5 horses 90% of the time. Then I'll run them thru' EXDC/KGEN COMBO and confirm my plays by running ENTROPY II and SYNERGETIC MATCH-UP II. I get a very high percentage of winners from my top two rated horses by using the factors that are working best (at that time) at my track. But I have to admit I'm having a problem with my Exacta and Trifecta horses. Again, I know it's my fault, because my poor record keeping in this area. I'm sure that Factor Evaluator will go along way in helping me with this problem.

So again, please renew my subscription to the Follow Up (I still reread my back issues and always find something that helps me out) and send me Quad-Rater (should be a great help with my Exacta and Trifecta horses) also an order form so that I can purchase Factor Evaluator.

Sincerely Yours
M.U., New York

May whatever blessings there are in the universe fall upon those of O. Henry House.

Thanks again
CC, New York

Dear Doc Sartin,

A note to express my gratitude to you and your people.

My wife and I have enjoyed the opportunity we had to meet you and the many hours of enjoyment the Methodology has provided us. We thank you for your kindness.

Doc,

... I had the exacta in this race 20 times picked 2-1 by Thoromation, and also \$100.00 on the winner and took more than \$5000.00 out of this race. Leaving the track, I was listening to a local news station on the car radio and a priest from a homeless shelter was making a plea for donations so the 40 kids at this shelter could have a Christmas party. When I got home I just couldn't get this off my mind, and on Sunday, I took a ride out to this shelter which was about 30 minutes from my home. I could not believe the sight all these people in one large room with only curtains separating their individual space. The kids were from infants up to about 11 or 12. I gave the priest \$3000.00 to get the kids some new winter clothes and toys for Christmas.

Doc, the looks on these kids faces when they opened the presents, this had to be the first time in their lives that they ever received something new that was bought just for them. I have never felt better about anything I have ever done in my life and the smiles on these kids faces, Doc, there is no way to describe this feeling. No words, nothing I could say, except that I will be back next year to help.

S.W., New York

DOC'S COMMENT: This is the kind of Holiday Message no greeting card poet could ever match. Bless you, Sheldon.

Doc Sartin

COMMENTARY

WITH A BIG ASSIST FROM SHANE

It would appear that Handicapping is the only field in which persons, almost universally perceived as professional experts, can get away with what in medicine or pharmacology, (as a couple of 'for instances') would be termed *malpractice*. If a surgeon opened your cranium to perform an appendectomy, you might suspect he was a bit off target. If your druggist filled your prescription for penicillin with Valium, you might enjoy the relaxation but sooner or later you'd suspect something was amiss. Pick any other specialized field you want and comparable mistakes, even to the most naive, would be unacceptable.

Yet, in the handicapping field, 'Professionals', under no social or legal pressure to be accurate, are continually barraging the public with the kind of subjectively oriented NON-fact that would be considered felonious in any other profession.

I cite the emphatic statements made in print by two well known *West Coast* professional experts to illustrate my case in point. I stress West Coast because I have not made a sufficiently large day to day study of result charts from the rest of North America to make my point universally accurate. However, I'm working on it. Wanna help? Your NON-West Coast input will be most welcome.

First, there was the commentary in *West Coast Notebook* by renowned handicapping journalist Jerry Antonucci that we printed and refuted in Follow Up #46:

Picking two horses to make the board in a 25-horse field is a challenge, and should be rewarded handsomely. Picking two horses to make the board in a six-horse field is a waste of time. ♦

Having earned so many large mutuels from races with five to seven entrants and, having seen so many examples of similar big wins in small fields by client Tony Hill, this commentary raised my blood pressure sufficiently to assign Shane to handicap EVERY WEST COAST RACE with fields of from 5 to 7 from that day forward. He has been doing so, downloading from BRIS via XTOR (yes, XTOR still works as an excellent downloading program). We printed some example races in Follow Up #46 using Quad-Rater in concert with Thoromation. A marriage made in handicapping heaven.

The results constituted a rebuttal to Antonucci of sufficient magnitude to end the argument...or so I thought.

Yet, in a recent article by the renowned James Quinn, we read this:

James Quinn's Simulcast Alert

"..... I typically react by allowing that a combination of big money and small fields has contributed to a dreadful oversupply of underlays. Nobody can beat the races by playing underlays, I counter, an incontrovertible observation."

"...SMALL FIELDS contributing to a DREADFUL over supply of underlays, ..." etc. By *underlay* does he mean that a horse that he thinks should be 50 to 1 is actually going off at 18 to 1? (see Shane's examples later in this commentary) Or, more to the point, does he mean that the horse HE would choose in short field would pay very little IF it just happened to win? There is one hell of a big difference in the two alternatives.

The similarity between Antonucci and Quinn is that they are both writing from a West Coast perspective. The difference is Antonucci is a newspaper columnist exercising his first amendment right to opinion, whereas Quinn is the author of nine - going on ten- books, and has presumably earned his title of expert, as per his ads in American Turf Monthly and elsewhere. Yet, more applicable than any ad to the advice of most experts is this little gem of a quote from Stanislaw Lem:

You will always find
some Eskimos willing to instruct
the Congolese on how to cope
with heat waves.

—Stanislaw Lem

How true of so much garbage in handicapping books and magazine articles. Eskimos from the frigid North telling those who live in the torrid heat of the African Congo how to deal with a heat wave.

I don't know to what degree the High Mutuels/Short Fields illusion exists everywhere in North America, but I DID read an article by Mark Cramer, who lives mostly in Maryland, about the subject. He declared that this old saw of short field, short price is another one of the many ancient but still potent myths subscribed to by "horseplayers" despite an abundance of evidence to the contrary.

I do not mean to imply that *all short fields* produce long shots. Some are in the five to six dollar range. So are many winners from nine horse fields. What is even more surprising than the number of long shots in West Coast short fields, is the number of winners paying \$7 or more and the high place mutuels that emerge as obvious choices from our advanced programs.

Here are a few examples from the weekend of Martin Luther King three day January holiday and beyond up to the point where we had to stop in order to get this issue to print.

I'll use just \$20 as a base bet and appropriately dutch two horses to win. I'll let you decide on your Exacta and/or Place bet.

January 16

Marshua's Dancer-Gazela Tr-Melvin, F Stute Own-Alpert, Alpert & Stute Mutual Pool \$372,837 Exacta Pool \$357,999 Quinella Pool \$61,007 Triple Pool \$75,940.											
\$2 EXACTA (5-1) PAID \$45.80											
\$2 QUINELLA (1-5) PAID \$29.00											
\$3 TRIPLE (2/1/5) PAID \$654.00											

Gary's Luck One pays \$7. *Fittobetried* pays the same to place. If you wish to ignore place or Exacta wagering and focus on win only, dutch the winner with ANY other horse. 60/40 calls for a \$12 bet on the winner. $6 \times 7 = \$42$. Less your \$20 wager you net \$22.

NOW for the ONLY short field winner in a total of four consecutive days of racing at Santa Anita that would not produce a worthwhile profit when dutched 60/40:

9134—SEVENTH RACE. 6 Furlongs. Purse \$42,000. Allowance. 3-year-olds, Cal-breds.

Index	Horse and Jockey	WL	PP	ST	¼	½	¾	Str.	Fin.	To \$1
9053	Strategist, E Delahoussaye	120	4	5	31½	41½	-	2½	14	.90
9053	If I Only Knew, D Flores	117	7	1	610	68	-	52½	2hd	4.40

(9004)	Satcooy, C Andey	120	6	2	4½	52	-	64½	61	4.40
(9085)	System, G Stevens	117	5	7	7	7	-	7	7	21.10
Scratched — Indosuez										
4—STRATEGIST 3.80 2.80 2.40										
6—IF I ONLY KNEW 3.40 2.80										
1—HOLIDAY DREAM 3.00										

\$12 wagered is $6 \times 3.80 = \$22.80$. Gosh, we only win \$2.80! Was it worth the bet? YES, because the 2 horses with the next LOWEST odds went off at 4.4 to one AND the others were at odds of to one of 6.1, 12.3, 17.7 and 21.1.

The trick is to stay EVEN or be only a dollar or two behind (or ahead) when the BIG payoff does occur. This way, instead of having to make up for a lot of losses with your big win, you make full profit.

In previous Follow Up's I've discoursed ad nauseum about the bevy of lower priced mutuels from major tracks based on many factors not the least of which is the simulcasting of "name" tracks like those in Southern California which are carded (not fixed) in a manner to produce *easily detected* winners so that Joe Innocent, the amateur horseplayer can brag about getting three or four winners that day. He may lose money, but he gets winners. THAT's what makes the simulcasting of S. California tracks so *profitable*.

However, because the races are *carded*, not *fixed*, to benefit the more obvious choices, each racing day produces an average of three extremely high paying winners. Take those examples from the same January 16 at Santa Anita. Just follow one of the procedures Tom Brohamer outlined at the November Las Vegas Seminar; and featured in Tom's article in this edition of the Follow Up: CROSS OUT ALL of a horse's races run at distance where a horse NEVER performs well. Using that guideline we land on the fourth race back as the paceline for *Navegante*. Look at the readouts AND the results:

9129—SECOND RACE. 6 Furlongs. Purse \$12,000. Claiming. 4-year-olds and up. Claiming price 10,000

Index	Horse and Jockey	WL	PP	ST	¼	½	¾	Str.	Fin.	To \$1

Kind of takes the sting out of only making a short profit in a couple of races over four consecutive days, doesn't it?

What I'm stating *emphatically* is that there are enough longer priced winners in short fields to justify my thesis. You just have to be able to *get* them. Apparently conventional wisdom does not. As Tom Ainslie has so wisely stated - "The way to overcome lower mutuels is with *better handicapping!*"

The causes of this iconoclastic irony: high mutuels in short fields, are many. The most important reasons being the over-all quality of U.S. thoroughbreds has diminished dramatically over the past few years and that in short fields, so-called *racing luck*, being blocked or crowded by other contenders, is reduced to the point where all entrants have a maximum opportunity to display their innate talent.

Now in fairness to James Quinn, I must say that the true subject of his article was to give some tips on how to win S. California races to horseplayers - even handicappers - in the hinterlands. Mixed in with some of his famous didactic subjectivity were many positive facts. Without taking advantage of the good publishers of American Turf Monthly by reproducing the entire article, I'll just insert the few valid points made by Quinn where he is an expert.

Here are some of James Quinn's more viable tips that can benefit all who wager on races from S. California. They are excerpted from his article in the January issue of American Turf Monthly. The title of the article is *Simulcast Alert, Hot Tips for Handicapping the Southern California Circuit*:

TAKE IT FROM THE EXPERT...

...JAMES QUINN can help the novice with fundamental aspects of the game and will elevate veteran players to new levels of parimutuel performance.

Following long layoffs, southern California horses win their fair share of races.

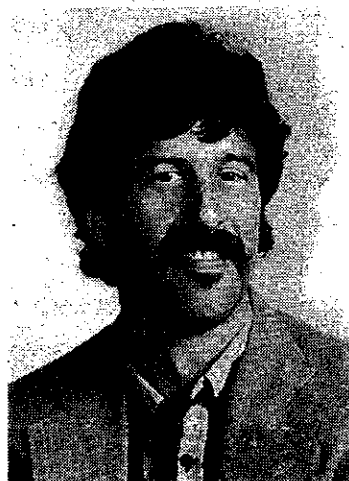

Shippers from northern California win their fair share in southern California at \$25,000 claiming and lower, but are usually outclassed at \$32,000 claiming and higher, and in all non-claiming races.

As a rule, races limited to California-breds will be competitive with open races at comparable class levels.

Pay strict attention to the southern California stakes program, all divisions, which is the best in the nation.

*\$25,000 claiming = maidens
\$32,000 claiming = allowance;
non-winners of one other than...
\$50,000 claiming = allowance;
non-winners of two other than...
Above \$62,500 claiming = classified
allowance and open/restricted stakes
having purses below \$100,000*

Now, I'll turn things over to Shane for his presentation of some of the ongoing evidence compiled since last summer at Hollywood Park, but this time gathered sequentially from Friday, January 14 through Monday, January 16, 1995 at Santa Anita:

SHANE SARTIN:

Well, here I am again with another batch of races with seven horses or less. All of these races are from Santa Anita just after those days when the jockeys refused to ride due to the massive rainstorms we went through here in California (I heard they scraped off a couple of inches of muck from the surface to stabilize it somewhat). Two of the races are from Jan. 14th and three from Jan. 15th, 1995, which made up the first triple of the day and paid \$941.70 (Okay, so the second race for that group had eight horses. It's still pretty short). As usual, I download from BRIS and then select my pacelines via XTOR using the same criteria as I mentioned in Follow Up #48. That is, using the best speed rating from the last three races of comparable distance, surface and sometimes class. After doing this, I put the races through Quad Rater, and then through Thoromation. Often times I will use the "HIDE" feature in Quad Rater so that I don't include obvious non-contenders when copying races into Thoromation. So if you see fewer horses in these Thoromation readouts, you'll know why.

IT'S NO SECRET THAT I'M A SMALL
BETTOR. ONLY 58 BUCKS FOR THE
DAY. PLUS, THE COMPANY PAYS MY
DOWNLOADING COST. YET WITH QUAD,
AND T'MATION AS A COROLLARY, I
DID PRETTY GOOD. MY DAD SAYS
THAT THE "VALUE" EXPERTS SAY
THAT MY R.O.I. IS IMPOSSIBLE.
BUT HE WON'T LET ME READ THEIR
BOOKS, SO I DON'T KNOW. I DO
KNOW THAT FACTOR EVALUATOR HAS
HELPED IMPROVE BOTH MY HANDI-
CAPPING AND PROFIT A WHOLE LOT.

SHANE.....

DOC CONTINUES:

I don't want to sound like I'm beating a dead horse, but here are a few more examples without readouts, all of which were in Quad-Rater, Synergetic Match Up II and/or Thoromation's top 2:

You might be interested in how Factor Evaluator, from Shane's and my handicapping, got us winners and place horses. During this period we found that the Auto Adjust was getting the lower price horses while AUTO-S preferred the higher odds horses. I must emphasize that these Factor Evaluator conclusions come from our handicapping during this period. These findings are not generic. YOU must determine what factors WIN, PLACE and SHOW from your own evaluation of factors.

This article is purposefully lengthy because I still hear from clients, especially at major track markets who persist in clinging to the MISinformation about short fields and also about the futility of boxing three horses in an Exacta and, most especially irritating, their downgrading of finding the place horse, not merely for Exactas, because they often pay more than the winner. It was to counter such B.S. that we developed Quad-Rater as a handicapping tool to find winners and in-the-money horses; and Factor Evaluator² so that you can determine which readouts in each program will produce the contenders that WIN, PLACE and SHOW.

I keep hearing that you cannot make any money dutching two horses to win

WORSE CASE SCENARIO

As a firm believer in the fairness doctrine, I searched for a day when short fields DID produce relatively low mutuels. We found a day when *all* the races had short fields from 5 to 7. This was one of those anomaly days caused by the highly publicized California "storm of '95".

The lowest mutuel was \$3.60 - the highest was \$10. If we had skipped the 5 horse field race the average Win Mutuel was \$7.15. However, in the interest of displaying complete fairness in my adversary role, I will include the \$3.60 winner in my figures. First, a look at the NON maiden race results charts:

Wagering level:\$5 win-\$4 Place(1 horse)-\$12 Exacta Box-\$48 Tri. Box

I keep hearing that you cannot make any money dutching two horses to win when the winner only pays between \$6 and \$7. This is not true mathematically or otherwise. Here is a day where the overall average win odds *seemed* to reflect the opinions of Antonucci and Quinn. That's the bad news. The good news is that all six of the non-maiden winners ranked one or two in all of our recommended programs.

With the possible exception of the 7th race, the so-called "value players" would have been sitting on their hands on this showery, sloppy track, January 25, Santa Anita. Either that or stayed home because of the rain.

Weather-caused "off tracks" scare too many of you. These kinds of conditions produce the easily detected obvious horses more than they do the longer priced horses who tend to win most often when tracks are drying out. This would be especially true on a day where a lot of trainers scratched their horses because of rain. The fewer horses that remained entered were those whose trainers (yes, I said it) had no fear for their animal's performance.

AVE. WIN MUTUEL	AVE. PLACE HORSE MUTUEL
\$6.90	\$5.15

If you dutch a \$6.90 average win mutuel 60/40 and assume that the low odds horse won every time, (which it did not in these races), your bet would be thus: $\$3 \times \$6.90 = 1.5 \times 6.9$ or \$10.35. More than doubling your money on that \$5 bet. If you bet \$4 on the place horse, your return would average \$10.30 per race to place. All six winners came up easily in the top 2 in Quad, Synergetic Match Up II and Thoromation. 5 of the 6 place horses were likewise designated as such by readouts from the same programs.

Win Wagers = 6 X \$5 = \$30
Win Return 5 X \$10.35 = \$62.10 - \$30 = 32.10
Return on Investment Win = \$2.07*
Place Wagers = 6 X \$4 = \$24
Place Return 5 X 5.15 = 51.50 - \$24 = \$25.75 net profit
Return on Investment Place = \$2.15
Profit 52.50 - 28 = \$24.50

* in our figuring of ROI, we add the dollar. By other standards, the profit per dollar wagered would be: WIN: \$1.07; PLACE: \$1.85

I won't figure Exacta or Trifecta profits. I'll leave that up to you. But I shake my head in complete bewilderment at those of you who cling to the stubborn notion of "I only bet to win". The big money is in the exotics. Andy Beyer's book *Beyer on Speed* emphasizes this fact. So do many other lesser lights, including me. That means learning how to isolate Place and Show horses. Refusing to even attempt to learn is stubborn resistance of the first order. Fortunately Factor Evaluator has been designed as the best teacher of this skill.

Now fade out and fade in the next day's non-maiden races with fields of seven or less. Today the track is listed as Cloudy, Muddy turning to Good. Here are the non-maiden short field race results:

NO TRIFECTA THESE RACES

The rating/ranking determination leading to wagering decision in Quad or any other program are reinforced through the use of the new Factor Evaluator² (see article this issue). It answers that old and ubiquitous question that clients have asked for years: "How do I know which readout(s) to use?" The tools are there, it's time to USE them.

The toughest aspect of my work, from the beginning, has been the attempt to dissuade clients from clinging to ancient myths or yesterday's rules. To accept the dramatic changes that have occurred in racing in just the past few years as reflected in result charts mutuels. And, caused partly by the decline of America's Breeding Industry together with the proliferation of off-site wagering - and particularly the ability of major tracks to beam signals throughout the U.S., Mexico and Canada.

Friday, January 27, 1995. Track Cloudy & Good. I'll use ONE maiden, 4 year olds up, short field (5 horses) race because ALL horses had pacelines. NO first time starters. There was also a 4 horse feature race on this day where both the winner and place horse were standouts on all of our programs so it was a NO PLAY race.

Average Win Mutuel - \$10.75. Average Place Mutuel - \$4.55 (better than winning a Sports Bet).

I could go on doing this for every S. California racing day of any meet but I'll stop here with the third successive day in this January week. I hope you've seen enough short field mixed price mutuels to convince you that the old saw of Short Field/Short Price is just what I said at the start: An old, outdated and contaminated myth. We're living in *today's* racing world, NOT yesterday's.

Taking a three day Win and actual Place horse mutuel average, here is what we see:

Three Day Short (7 or less) Field Average, including worst case scenario:

Win Mutuel = \$10.93 Average Place Horse Mutuel = \$6.05

If you throw in the Monday MLK holiday, Short Field Mutuels are out of sight. I don't mean to isolate Quinn's statements on this subject. His article was just handy. Virtually all the leading experts have expressed the same thing. I think the problem is that when someone is called an *expert* they tend to rest on their laurels, develop fixed, subjective opinions and cease researching. What else could it be? Thank goodness I'm NOT an expert.

9202—THIRD RACE. One Mile. Purse \$39,000. Maiden. 4-year-olds and up.

DOC SARTIN

BOOK REVIEW

SCARED
MONEY

MARK CRAMER

With *Scared Money*, written in the form of a novel, Mark Cramer again becomes the first establishment author to produce a work whose theme should be the bell cow of all future "handicapping" books. By establishment author I mean one who has had a work published by a major trade house such as Wm. Morrow or Houghton-Mifflin. Mark gave Wm. Morrow a whirl with *Cycles*, but this time, through his pal, noted author Mike Helm, Mark opted for City Miner Publishers in Berkeley, CA. Perhaps Mark will get a fair share of royalties this time. I only hope it was the publisher, not Mark, who chose the names of the persons who praise the book on the dust jacket. With the exception of Tom Ainslie, the names recommending the book would steer me clear of it if I didn't know Cramer so well.

The possible tragedy that could emerge from my own praise of this book is based on the way certain members of the handicapping literati have followed my leads and predictions in the past. I fear that a goodly number of unqualified writers will take a stab at authoring similar themes filled with plagiarized crap and will probably make big profits from the gullibility of a naive "horseplayer" public.

In essence I'm referring to the emerging focus on the Psychology of Winning, as opposed to the ongoing flow of unoriginal, repetitive works from writers dispensing handicapping information and lessons that have NOT undergone much transition since Tom Ainslie first so well articulated them in 1968.

Mark Cramer has always been an open devotee of my Psychology of Winning column in the Follow Up. But before I ever emerged on the handicapping scene,

he included the mental, attitudinal aspects of selection and wagering as being a most vital and important part of the handicapping process.

More than being a pioneering journey in the direction handicapping books should have taken over a decade ago, Cramer's new novel is a fun book to read for *everyone*, including the unfortunate many who will miss its essence and the innate point made so well on every page. The book IS entertaining at every level. It's protagonist is a fellow with some of Mark's talents and qualities who jobs around as a jazz pianist. I know him. Instead of being a Nordic looking teacher of romance language, like Mark, the hero is half Latin-American, half Jewish of European descent who speaks Spanish. And he's a horseplayer, which almost qualifies him for the late Sammy Davis Jr.'s definition of a REAL minority: "A short, Black Jew with only one eye." Actually, one-eyed people enjoy far more social acceptance than "horseplayer", so our protagonist, Colombian born Mateo, takes the name Matt. Biblical, like Mark. Since the setting of the book is in the NOW, jazz piano gigs for a guy who digs the kind of music associated with Ella Fitzgerald, The Duke, The Count, Miles Davis, Charlie Parker, and the like, are not much in demand. Wow, can I identify with this – except that I go back even farther than Miles Davis.

When he splits with his girl friend, he's forced to live in his car, and, because he resides in Los Angeles, parking it where he won't get caught is almost as big a problem as it would be in New York. You should now be getting a picture of a homeless Latin-looking guy working sporadically playing an unpopular brand of music who's looking for the gal that got away...or a reasonable substitute.

If someone like this could afford a psychiatrist, which he can't, but let's say he finds a free one...what would the Doc prescribe? Go out and become a professional handicapper, right? Sure, just ask any physician or clinical psychologist associated with a Behavioral Medicine Clinic that is recommended by Gambler's Anonymous.

Yet, against all sociologically acceptable dictates, that's just what our hero

does: Determines to become a truly PROFESSIONAL (like make your living at it) HANDICAPPER. First, of course, he needs a beautiful new girl friend. This is not only true in a novel, but in life. Women are never given proper consideration for the number of destitute guys they've put back on their feet. Any jazz pianist can tell you that this is an irrefutable truism.

So right away, even at its superficial level, we have a highly believable work. I'll leave it to you to follow the rest of the novel's plot. Phillips Racing Newsletter, who openly didn't like Mark's great initial novel, *Please Hold All Tickets*, (presumably because it WAS a novel) said, in December, they hadn't read it yet but that they would review it in the January edition. They did NOT. THAT should help sales of the book considerably since we have so many horseplayers who seem to play the game of the blind following the blind.

Although NO reader, regardless of intellect or persuasion will fail to enjoy this book, its real essence begins with Cramer's preface:

PREFACE

I recall an impassioned confession from a corporate executive.

"Mark," he told me. "I'd gladly dump my job for the race track if I could only make a portion of what I make at work."

While numerous horseplayers have already made this unconventional choice, even more continue to lead a double life, maintaining their position in the straight world but dedicating an intense portion of their existence to improving their game. Unlike the hard-core cynics found in most popular racing fiction, these are gutsy romantics who truly believe the races can be beaten. They cannot be pigeonholed by age, sex or profession. Often with family responsibilities, they must daily find that delicate balance between their struggle to beat the odds and their desire to fulfill a role in society.

Thanks in part to the popular cliché of the degenerate horseplayer, however, anyone trying to become a winning player must first psychologically overcome the scorn heaped on them from society at large. *Scared Money* is about the passionate dream of becoming a pro, of building the self-confidence necessary to prevail in a game where 98 percent of the players habitually get beaten.

Though horseplayers are bombarded with systems and methodologies that promise to make them winners, the truth is that even some of the best handicappers are psychologically conditioned to lose.

The stories that Matt narrates in *Scared Money* confront such vital psychological issues as dealing with losing streaks, relating to loved ones, avoiding dependency, overcoming deep-seated cultural taboos and building self-confidence.

The fictionalized setting here, based on predicaments any good horseplayer can relate to, hopefully will allow readers to experience, rather than being told, what they must do to confront the ultimate enemy within.

Not only horseplayers but anyone who has ever contemplated abandoning a predictable life in favor of one based on calculated risk should appreciate Matt's sometimes hilarious often complicated struggle towards realizing himself.

—Mark Cramer
Saratoga, 1994

Starting with this Preface I put so many markers between quotable pages in this book that if I photocopied them all this review would contain almost the whole work.

A few other gems include:

Later that afternoon, I met Sonia for lunch in Chinatown. I asked her for her opinion. Was I pressing? Mischievously she suggested we consult a fortune cookie. After cracking open my cookie, both of us could have been recruited by the New Agers. The message said: *The wise farmer plants more than one crop.*

Am I flattering myself or is this an inference about betting on two horses to win or at least multiple choice wagering?

Part of my losing streak had been caused by getting too hung up on continuity rather than change. The Morella bet was but one of these tired repetitions.

With each betting pattern, a handicapper has to decide whether several losses are a normal part of a down cycle with an inevitable upturn down the road, or whether that particular pattern is no longer valid.

In a few short phrases, something I've been trying to get across for over 20 years. Don't rely on any one factor. Look for corollaries; and, per something like the Factor Evaluator, KNOW WHAT FACTORS ARE CURRENTLY VALID!

It was suddenly clear to me that everything you do outside the track has an impact on your wagering. In the morning you swat at a fly and in the afternoon you decide against using the three horse in your exacta, and somehow these two events have a secret connection.

Needs no comment. An OBVIOUS fact of life. Observe it.

Without a doubt, the best book on betting horses is the player's own records. No expert's book would have explained that, for me, the difference between a winning and a losing streak was primarily one of decision making. And decision making was linked to things like attitude and inspiration.

Horse racing as therapy had not been a conscious plan. It just materialized and worked with Willy. Maybe it would work with Vince. He could substitute a harmless but demanding passion in place of a destructive one.

(he) had reminded me that dissonance was the name of the game. He had also contended that I was playing too cautiously, influenced by the doubt and vacillation that comes with a losing streak.

Immediately after publication of *Scared Money*, Mark went to Bolivia to teach English to Spanish speaking citizens. Perhaps by the time he returns some of his apparently close buddies will forgive him THIS!

If one day I would ever have the chance to become a pro, then the least I could do today was to stick with race where my insight transcended the banal fixations of classic handicapping.

And THIS!

I had been hard on myself for not betting more. Now I realized that lots of the guys who could really pull the trigger were machos at even-money and wimps at ten to one.

What about this one?

Success at the races is a holistic enterprise. If a person can handle making off-track decisions under stress, then he is ready to handle the races.

HOLISTIC! This has been our theme for many years. It's nice to have one's thesis echoed. Almost as nice as being an iconoclast. Of course, Mark's one too. He just has a knack of keeping his friends despite the fact.

To set this scene: The protagonist has abandoned his improvisational jazz piano styling and his love of dissonant chord structure and is accused by his bass player - "Man you're playin' like a cocktail pianist..." (That's equivalent to elevator music). Recognizing his lapse, Matt thinks to himself...

In the meantime, I had to be prepared to bet on races where my improvising skills and the dissonance I loved so much could play a role.

In short back to jazz. I have always said *Ours is a jazz methodology!*

Spencer should love this. It fits in with his Editorial this issue.

I opened my form to the sixth race. I looked gleefully for the most-likely loser.

Breaths there a Money Management "expert" alive who hasn't berated this philosophy?

Dumb decision in not boxing all three horses in the exacta. So what if a three-horse exacta box is the wrong strategy in the long run. I had the short run to consider.

Then there is this one which is a possible, but less than optimal, endorsement of my philosophy. It's more of a plug for the 8-1.

To compound my depression, two hours before the call from Danielle, I had made the dumbest decision of my race track life. I had two contenders in the feature at Hollywood Park, one of them 8-1 and the other 3-1, and I had played the 3-1. As the 8-1 was crossing the wire five lengths ahead of the field, I was asking myself why I had bet the lower-odds horse. Intellectually, I knew that you just don't split hairs when deciding between two contenders. You're supposed to bet the one with the highest potential payoff, you pinhead, or at least bet them both if the odds are high enough.

Since Mark has often virtually begged me to take issue with something he writes, let's see: Let's say the guy bet \$40. He bets the "wrong" horse. He loses. He's out the forty. Now, had he dutched his two standout choices 60-40, the loser, had it won, WOULD have paid \$96. A profit of \$46 on his \$40 bet. His other choice, the horse that won pays $\$18 \times 40\% \text{ of } 40 = 16$ or $8 \times \$18 = \144 . A profit of \$104. Instead he goes home with nothing.

That sums up anything with which I can take any issue. Otherwise the book was a great inspiration to ME!

If it is true that my own work inspired, even to a little degree, some of the author's theme, I am flattered. I'm also highly motivated to get away from all the emphasis we've lately put on handicapping per se and return to the gal who brought us to the party in the first place. By whatever name you call her, she's The Psychology of Winning.

Most of you, and the percentage rises weekly, are more than adequate handicappers. Many are better than I if one uses the traditionally accepted definition of handicapping. Many of you frequently make more money from your effort than even our most distinguished teachers. Yet many of you still cannot resolve your personal anxieties and self-doubts. As a result you make, overall, far less than you should and compound each succession of a few losses with idiotic mistakes. The kind of behavior that Mark stresses so strongly in this book.

For this reason, as per the last several seminars where a private consultations were encouraged, 87% of all questions...other than those technical ones involving downloading or how do I turn the darn computer on...were NOT about handicapping but about psychological problems pertaining to emotional equanimity, anxiety, self confidence and, after Follow Up #47, Attention Deficit Hyper/Hypo Active Disorder.

When I began I promised to teach clients the Art and Science of WINNING, not handicapping. I have a total of 48 feet of shelf space here at the office filed mostly with books on handicapping. I have almost twice that many at home. Each volume is filled with various bits of information and MISinformation that is largely so repetitive that at times it seems they were all plagiarized from something written by the same original author. Come to think of it, with a few notable exceptions, they were.

It's NOT that some of these works are less than excellent. The fact of the their pages subjective contaminations that have rendered the information less than optimally useful and turned the MISinformation into popular "horseplayer" MYTHology.

What all of us who allege that we are teaching this - or whatever METHODOlogy - is being taught at the moment - we must remember when we attempt to instruct clients or others on the subject of "handicapping" per se, we seldom do no more than parrot something already said, read or written by ourselves or someone else. Hence, thanks to Mark Cramer and his *Scared Money*, I am reminded of my TRUE responsibility to clients. TEACH WINNING...NOT what is loosely termed but never adequately defined...HANDICAPPING.

Do yourself a favor. Read Mark's book. It's cover priced at \$19.95 + tax.

Howard G. Sartin, Ph.D

The Psychology of Winning

My eyes were certainly opened at the November Las Vegas Seminar. We announced that the teachers would be available on request for private consultation on any subject about which that teacher was qualified. To protect confidentiality all requests were in writing and given to me for the assignment of a consultant. Perhaps you will be as surprised as I at the result. There were 64 requests. 12 were for technical support (how to download, how to get the printer to work, etc.), and these were assigned to Shane and Spencer. Only 9 were handicapping questions. They were assigned to Bradshaw, Brohamer or Connolly, depending on their nature. That left 43 problems that were purely in the realm of the psychological, requesting counseling from either Phil Gowens or myself. Thank goodness Phil was there. 43 out of 64 is 67.14%. For you students of mathematics and statistics, 67.14 is almost exactly the number that constitutes a majority on a standard deviation co-efficient of correlation scale.

Do you think for one second that the majority of questions would be about psychological problems (some very deep) if they had to be asked in a public forum? Of course not. Like any other seminar or workshop the questions would be about handicapping or computer programs and the answers would, for the most part, merely confirm what the questioners already knew.

The plain truth is that, except for some newer clients, most of you KNOW how to pick contenders and pace lines and *winners*. Your records prove it incontrovertibly. Yet you fail to optimally act upon your knowledge because of anxiety, indecision, lack of determined focus and a number of other factors that have little or nothing to do with handicapping itself. We have a number of clients who say that the reason they don't go to seminars or workshops anymore is because they feel most of the handicapping and computer program instruction is old hat to them - stuff they already know. This may be true, but the question is, are they performing profitably from that knowledge?

We know that many are. Theirs are among the testimonials in the Follow Up's Vox Populi feature. Still, some are NOT - for the simple reason that there is still a cataclysmic void between their knowledge and the ability to put that knowledge into positive action.

This is a psychological problem that can be resolved. We know this because so many

clients have resolved it. With the addition of Phil Gowens to our teaching staff we now have more ability to help in that resolution. Our only problem now is to get NON-winning clients to accept the fact that, after absorbing just so much knowledge, their problems are psychological.

CASE IN POINT: Phil Gowens worked with a certain client who discounted the value of the Psychology of Winning. The client was a male, with an abundance of macho whose nature and occupation both dictated that psychology was for girls and sissies. Phil's relationship with this client was sufficiently deceptive to make the client think that he was getting handicapping lessons when all along he was getting therapy. The fact of the matter is that Phil did not dispense even one iota of handicapping matter - it was all psychotherapy. But because effective psychologists are all deceptive (we're a sneaky lot by nature and by training), this client never realized that his progress toward becoming a big monetary winner was psychotherapy based. Phil is a master of making therapy fun by disguising it as an exercise in improving handicapping.

Incidentally, the reason Phil is not at the March Las Vegas Workshop is that his wife Gloria won them a ten day vacation for two in Argentina. Ironically Buenos Aires, and Argentina in general, has the largest population per capita of psychologists and psychoanalysts in the world. Wow, will Phil be glad to get home!

In future seminars and workshops we'll offer more private counseling, and we'll direct more podium time to giving solutions to the kind of problems most heard in private. This way no one will be embarrassed and all attendees can maintain that wide-eyed innocent look of "he must mean you, not me". This is what we used to do when our seminar attendance was at its highest level.

Then we started this business of going over races chosen not by the attendees but the teachers. Big deal. And when a teacher misses a race, some smart ass walks up and says, "That's the last time I'll ever listen to an EXPERT." Just the kind of attitude we DON'T need. At the 1994 New Jersey Workshop, however YOU the attendee chose the races and were allowed to process them on computer and be the prime source of contender and pace line selection. That's the way it should be done: by the process of group participation. That's the way we'll do it at the March Workshop in Las Vegas.

That's the basis of group therapy. The Sartin Methodology is based on the therapeutic process. A self-help procedure for making you a consistent winner, not *touting*.

Ever since my Follow Up #47 article on *Attention Deficit Hyper/Hypo Activity Disorder*, phone calls and letters have been pouring in by the dozens. Never before throughout the Follow Up's history has any one article elicited such response. It seems that a great number of our clients flunked the test attached to the article.

Ironically, a number of the communications came from those who had already been diagnosed with ADHD telling me how they were able to cope by intense focusing and over-compensation. But most merely wanted advice on what to do about it. Not being an M.D., I could not prescribe for them either Ritalin or Cyclert and would not have prescribed any of the more powerful dextro-amphetamines, regardless. The over-the-counter (HEALTH STORE) medications known as: MENTAL EDGE and L-PYROGLUTAMIC (which may also be called L-Pyroglutamate) have proved quite effective for some.

I also said in the article that many other disorders might *appear* like (mimic) or be associated with ADHD. Many of you asked me about them. Genetic Neuro-Transmitter disorders that can be disturbing but not necessarily debilitating. I have one. It's called Synesthesia and comes in several varieties: Chromesthesia, Audiothesia...it makes you dream in technicolor, hear sights and see sounds. How would you like to look at a paceline and hear a Bach Prelude or Stan Kenton's *Artistry in Rhythm*? Or on hearing the word "love" see a beautiful sunset?

In answer to some of those questions, there are a number of disorders that mimic or manifest symptoms similar to those seen in ADHD that can be just as easily treated. You may wish to consult a physician (M.D.) *qualified* on the subjects. I stress *qualified*. Remember that when I went into kidney failure, my general practitioner M.D. originally said it was nothing but an inner ear infection. I had to plead with him for a blood chemistry test. The next day he called all panicky to tell me that I'd be on dialysis for the rest of my life. I reminded him that it was I who said my problem related to liver, kidney or pancreas problems and insisted on a blood chemistry test. Now when I see him he lets me diagnose and prescribe for myself. That's the upside. The down side is that medicine has become so complex that med schools can't really teach diagnostics as thoroughly as they once could.

Thus I am in no way knocking the medical profession, per se. Some of our most cherished clients are M.D.'s. Many of them are renowned specialists. And in today's medical world it takes a specialist or an older, wiser experienced G.P. like our beloved Dr. Paul Flowers to diagnose and effectively treat today's medical problems, so many of which are stress (and environmentally) related. Yes, I *do* have a great deal of respect for many M.D.'s.

Of particular interest to many of you might be the fact that the recommended treatment for virtually all non-pathological neuro-transmitter disorders, or functional disorders that mimic them, is: Appropriate medication (pharmacological or alternative medicine-as in herbs/vitamins) AND psychotherapy. Naturally, all the books recommend that this psychotherapy be conducted by a professional. That's economics, not necessarily fact. In the long run all psychotherapy for NONpsychotic or NONpathological persons is SELF-therapy: Individual insight into the problem using techniques such as 'self-talk' to work toward a solution that takes extreme focus and will power. As for what to say when you talk to yourself, here are two highly recommended, lay-terminology books to read:

They are both paperbacks and should be available at most volume sales book stores.

Back to the subject of Attention Disorder. Three months after my Psychology of Winning piece appeared in the follow Up, a syndicated newspaper article appeared throughout the country. Ron Ross sent me a copy from the San Diego Union. The article did make hero's out of certain celebrities suspected of ADHD:

For adults with ADD, life is driven by distraction

By JOHN BARRY
Knight-Ridder News Service

They are life's artists, channel-surfers, skydivers, original thinkers, fly-by-nighters, poets, bungee-jumpers, composers and one-night stands. Adults with attention deficit disorder are sometimes good, sometimes bad, but they are never dull.

They are like Kyle Miko, 20, of Hollywood, Fla., weight lifter, swimmer, all-around avid sportsman: In the past year, Miko has changed residences, jobs and girlfriends. Or psychology student and mother of four Jo Ann Lee of Hollywood: After five minutes of computer research, she finds herself switching her PC over to the "Mine-sweepers" game.

Just a decade ago, doctors believed that children with the inborn affliction ADD, usually characterized by hyperactivity and distraction, grew out of it in adulthood. Now doctors know many people carry ADD all their lives.

Adults just exhibit different symptoms. The fidgety kid who couldn't sit still in class becomes the corporate raider, or the tailgater in rush hour. The kid who stared off into space during tests becomes the poet, or the always-late worker.

There are legendary names attached to ADD: Mozart, Thomas Edison, Albert Einstein, John F. Kennedy, Abraham Lincoln, Ben Franklin, Edgar Allan Poe, Henry Ford, Salvador Dali, George Bernard Shaw and Emily Dickinson. All had traits that fit the ADD profile.

In their new book, "Driven to Distraction," Boston psychiatrists Edward M. Hallowell and John J. Ratey, both of whom have ADD, borrow a line of Dickinson verse to describe how the disorder affects adults:

"The thought behind, I strove to join

Unto the thought before —

But Sequence unravelled out of Sound

Like Balls — upon a Floor."

Like parent, like child?

"For years it was in front of my face but I didn't see it," says Coral Gables, Fla., psychologist Jerome Poliacoff, an ADD specialist. "Invariably, when a kid is sent to me with ADD, I can find a parent with ADD."

Poliacoff and his medical partner, psychiatrist Roger Rousseau, are forming an adult-ADD practice, and hope to bring national experts to Miami next fall to speak to South Florida's family practitioners.

The cause of ADD is the same in children and adults: a slight imbalance of neurotransmitters in the parts of the brain that regulate attention, impulse control and mood. Eight to 10 percent of the world's population has it.

Treatment is the same, too: usually a combination of drug therapy and counseling. The most popular ADD drug is Ritalin, which helps patients focus.

ADD is not always disabling. Characteristics of adult ADD include risk-taking, creativity and nonlinear thinking. People with ADD often aren't satisfied with a single pursuit. They sometimes typify the so-called Renaissance Man, a master of many arts.

Ben Franklin and Thomas Jefferson — both statesmen, scientists, philosophers, writers and connoisseurs — may owe the breadth of their genius to ADD. The United States has sometimes been characterized as a nation founded by people with ADD.

But there are others who suffer from the disorder. "Grown-ups don't fidget so much as they act impulsively," says Poliacoff. "They get married, or start a business, or leave a job based on impulse. Or they are inattentive. They miss the boss's instructions, or show up late, or miss the turnoff at the exit."

Whether an adult with ADD could benefit from Ritalin or other treatments depends on how much ADD interferes with his or her life.

But it's usually harder for adults to get help, mostly because a diagnosis is harder to come by.

No screening center

In "Driven to Distraction," Hallowell and Ratey write: "The diagnosis gets made by circuitous routes. With children, school should act as a kind of diagnostic screening center for the various learning problems. But adults have no such center. Rare is the workplace that would consider an evaluation for ADD in an employee who was erratic, underachieving and inattentive."

Often, an adult with ADD finds it hard to accept the diagnosis — even when he or she knows better.

As a child, Kyle Miko was a textbook ADD case. "We had to bolt his bedroom furniture to the floor to keep it in one place," says his mother, Pat. "When he was 2, he tried to jump out of a moving car."

But after a turbulent adolescence, kept partially in check by Ritalin, several years at a military school and intense sports activities, Miko says he grew out of hyperactivity and now questions whether he still has ADD.

His mother says she has the answer: He has moved back in with her after quitting a job and breaking up with his girlfriend in Wisconsin. That's been the pattern of his early adulthood.

If he wanted to live with her, she told her son, he would have to attend support-group meetings for adults with ADD sponsored by ChADD, Children with Attention Deficit Disorder, a national organization based in Plantation, Fla.

Miko is not taking Ritalin, but is considering it. He is now taking a journeyman's course in construction and he worries about sticking to the classes.

"I don't feel I need it all the time, but I'd like to have it for school," he says.

Positive side effect

Jo Ann Lee discovered she has ADD only after three of her four children were diagnosed with it. She was not a hyperactive child — in many ADD cases, there is no hyperactive component — but she has had difficulty all her life focusing on tasks, particularly tedious ones. She has never taken Ritalin, although three of her children have.

Lee's disorder had a beneficial side effect: It led her into the study of psychology. She now works as a psychological resident for Broward County psychologist Arnold Feiner, a longtime liaison to the South Broward/North Dade chapter of ChADD.

But she still has to contend with its effects on her life. "I can watch a movie and really enjoy it," she says, "and two weeks later see it again and say, 'I don't remember any of this.' It's never in my mind long enough to get processed into long-term memory."

But Lee adds that she is not taking Ritalin "because I've found other ways to function," she says. "As you get older and mature, you learn coping skills."

Coping skills recommended in "Driven to Distraction":

- Make use of reminders, such as lists, calendars and alarm clocks.
- Use pizzazz. Use color coding for files, texts and schedules.
- For paperwork, use the principle of OHIO: only handle it once.
- Break down large tasks into small ones.
- Prioritize rather than procrastinate.
- Do what you're good at.
- Keep a notebook with you to jot down good ideas.
- Leave time between engagements to gather your thoughts.

ADD reflected in wide range of behaviors

■ Common characteristics of adults with attention deficit disorder (ADD):

- A sense of underachievement.
- Difficulty getting organized.
- Chronic procrastination.
- Tendency to start many projects, but trouble following through.
- Tendency to say whatever comes to mind, regardless of timing or consequences.
- Needs high stimulation.
- Intolerant of boredom.
- Easily distracted, tendency to tune out or drift away in conversation.
- Can hyperfocus at times.
- Often creative, intuitive, highly intelligent.
- Has difficulty following rules, proper procedures.
- Impatient, low tolerance of frustration.
- Impulsive, verbally or in action; hot-tempered.
- Tendency to worry needlessly, endlessly.
- Insecure.
- Mood swings, especially when disengaged from a person or project.
- Physical or cognitive restlessness.
- Tendency toward addictive behavior.
- Chronic self-esteem problems.
- Inaccurate self-observation.
- Family or childhood history of ADD, other disorders of impulse control.

An elite group: From left, Albert Einstein, Edgar Allan Poe and Salvador Dali are three of history's more notable personalities who had attention deficit disorder. Those who suffer from the brain disorder are also likely to be nonlinear thinkers, risk takers and creative people.

The effect of this article should be highly beneficial to those who have or suspect that they have the disorder. Mozart, Einstein (who I mentioned in my article), Edison, Henry Ford, Emily Dickinson, George Bernard Shaw, along with Ben Franklin and Abe Lincoln, both of whom have been lifted by time above politics; and John Kennedy, who many refuse to lift above politics; along with Salvador Dali and Edgar Allan Poe.

Most of these are the kinds of names that people would delight in being associated and share a little disorder with. Even though the disorder wasn't named until 1980, long after all of the above were deceased, their personal histories are filled with data that indicates the presence of ADHD. So now, instead of being distraught or even ashamed of having the disorder we can wave it proudly as a flag of honor with our name emblazoned upon it.

Just be sure to maintain a sharp focus and continued *over compensation* so that your ability to assimilate data and your subsequent use of that data in handicapping does not suffer. Either that or advance quantum physics or invent a new light bulb.

In reference to my earlier statement about the huge response to that Follow Up #46 ADHD article, it must be recognized that not only do many other *functional*, as opposed to physiological, factors tend to mimic any disorder or disease we see or hear symptomatically described, but just the stimulus of the description alone can create the response of our "having it." This is called "Associative Empathic Hypochondriasis." We all suffer from it from time to time.

There are some ludicrous diseases and disorders defined in the Psychiatric Diagnostic and Statistical Manual-IV (DSM IV). Dozens more, taking up an additional 187 pages over the number in DSM IIIA. Granted that it can be dangerous for many lay persons to read any medical book written specifically for those who are health professionals.

Many perhaps, but not most.

For those with sufficient intelligence and perception to evaluate their content, knowledge of the medical information contained in the Merck Manual and the Physician's Desk Reference-Pharmaceuticals should be almost mandatory or the patient can become the victim of all too frequent incorrect diagnosis and improper prescription of certain drugs, but especially when several counter indicative drugs are prescribed. Such knowledge can also lower your medical bills by thousands of dollars when used to catch your M.D. or hospital in a reversible error.

As for the lay person reading DSM IV, it could be dangerous but on the other hand reading it in its entirety will not only keep one totally occupied for weeks, but also convince the reader that the whole world is so mad that he/she won't worry about whatever is they may think they suffer. DSM IV will convince them that virtually any and all behavior constitutes at least one diagnosable disorder.

When we finally come to sense that the whole world is mad, perhaps we will join Scaramouche in learning the gift of laughter.

Q&A WITH THE DOC

We get questions from those of you who purchased the initial version of the Quad-Rater program which, on the 3 year best section list INNER. This is, in fact, a non-existent function which slipped by our testers. NO HARM - just don't use it! We have since removed that option from the program.

If the track at which you are currently handicapping has an inner dirt or inner turf track you simply enter three year best times for those tracks under dirt and turf as specified for any other track. If you wish to do so without disturbing the 3 Year Best times for the main dirt and/or turf tracks, merely call the inner track something else and store your 3 Year Best times accordingly.

EXAMPLE: AQU Inner Dirt - name the track AID. Belmont Inner Turf - name the track BIT. This way you will still have your AQU or BEL.

Quad has been tested and used throughout the U.S., Canada and Asia and continues to get rave notices and produce spectacular profits when used as directed in its accompanying manual and in various Follow Up articles.

Still there are some adventurous clients who like to re-invent the wheel even if it costs them. I have always admired America's great adventurers so I'm not complaining. After all, aren't they what made America great by killing off the Indians and most of the buffalo?

But be careful. The Indians are back with a vengeance. Gambling casinos and off-track betting. So are the buffalo with their meat selling at a premium higher than beef.

Some are still clinging to the myths that 3 year best times, because they were made by extremely fast horses, are not optimal. These people choose to enter alleged pars or what they refer to as representative times. They cannot get it through their heads that all static times are relative and that the program automatically adjusts for the vagaries of time differentials.

If you insist on going against a tried and proven procedure you must do so at your own risk. And, even more important, the key feature of entering 0 when the program asks for Speed Rating and having it AUTO-produce the same or, especially, a *different* track's speed Rating to *today's* track will be lost to you. Ironically many of those who are experimenting with time other than 3 year best are the very ones who, when the program first came out, sent us some of their extensive and highly profitable win records.

I can readily understand someone not wishing to subordinate their ego to my direction. That's rugged individualism. But when it come to messing with our computer program prescriptions, I can only hope that they are not only rugged individualists but also rich individualists because it will cost dearly.

On the subject of Quad, and this applies also to all of our four call programs, we receive numerous questions, especially from newer members about the following:

Q: How do I make a Track to Track Adjustment?

A: You DON'T!!! A great deal of time and effort went into creating, testing and perfecting AUTOMATIC ADJUSTMENTS that do the job for you. Some of these people demand to know how we do this. That's our secret - Get Factor Evaluator and use it as directed. You'll see immediately what factors are best handling any given situation based on your handicapping. It also can make a Result Chart Profile, which is less predictive by far than an evaluation of your own handicapping.

Sad to say, it is extremely difficult to help people who do not keep essential records. Even harder to help those who persist in leaving out winners and/or place and show horses. The guidelines, as close to rules as we'll ever come, that were published in the Quad manual and in several Follow Up's for what horses to enter from which line have solved this problem for countless numbers of clients. I use them. Shane uses them. We have no problem getting winners, some paying out of sight high mutuels. You can do the same if you abandon your stubborn resistance and stop clinging to outmoded mythical rules.

Q: With Quad-Rater, how do I figure Early Late bias' - both horses and track?

A: You don't have to. It's done for you within the program. When certain people view the Cigar Graphs both of which are adjusted, they sometimes ignore my statement that the thick and thin lines do not represent 2nd Call and Third Fraction. Getting people to understand this has been difficult.

Examine the readouts on the next page closely. Note that in Quad-Rater the DREAM RACE is based on the adjusted Early Pace - the average of 1st and 2nd fraction of the horse who is best in that average. In this case *Tajo*. I have often said that this horse, the one whose EP line equals the Dream Race EP line has thus far not won very many races but is almost always in-the-money (based always on your entering the horse). Now look at the thin line on the Cigar Graph. See where it says Finish and then gives a Ranking. That means FINISH, NOT 3rd Fraction. From the lines you enter, and in this race Shane originally entered seven horses (it was only an eight horse field). He only kept those who made the top five in either POR or POH. I will often go as deep as six because I know you will and I want to be able to put myself in your head when helping you.

NOW, the program automatically determines things like running style and track valence (or bias, if you prefer) based upon the match up of contenders and various other Chaos Formula indicators of who is most likely to finish first or in-the-money at the track being handicapped.

After narrowing the field to five or six with the help of Quad's line graphs, POR, POH and LS Detector Readouts some savvy clients don't even use the Cigar Graphs. They make their decision at this point. At S. California and a few other warm weather tracks, there are those with enough skill to do this. I'm seldom, but sometimes, among them. So is Shane. But, as it says on some of those supervised exercise commercials - 'don't try this at home.'

Now, for those wagering more than \$20 per race, we have emphasized that you copy your final contenders to either Synergetic Match Up or Thoromation as the best confirming corollaries for Quad. I don't know about you, but I'm not inclined to bet \$50 to \$200 on a combination of selections without a corollary, and those mentioned are the best!

Now I see my confirming corollary and I'm ready, able and relatively un-anxious about making a sizable wager.

Next question is the oldest in the book:

Q: How do I know which Quad readout to use?

A: After reading the Quad-Rater manual and all the related Follow Up articles, if still in doubt, get (or make your own) Factor Evaluator. If it seems like I'm pushing this program, I am. This program will become instrumental in making you money and answer so many questions, including the one above.

Then often comes the question which may seem funny to many of you, but is frequently asked:

Q: What do I do about leaving the winner out of the computer so often?

A: Put it in. That's the answer I'm often tempted to give. But I'll bite my tongue and just respond by saying that contender selection has been addressed by us for years at seminars, workshops and, especially in the Follow Up. Granted, certain guidelines have been eliminated and others expanded upon over the years as racing has changed. Yet, in the final analysis, it is incumbent upon the handicapper him/herself to go over races where the winner was not figured and to determine why. And, what would happen if that horse was entered from a representative line. And by representative I mean, emphatically **REPRESENTATIVE OF TODAY'S RACING REALITIES**.

Q: Do I need to use the APV, Sartin Class Rating-Beyer number, etc. screen in Quad-Rater?

A: You don't *need* to do anything. Many find the procedure helpful.

Q: How do I use the...(describing the above mentioned option)?

A: As directed in the Quad manual.

Q: What is SCR? What does it do and how is it figured?

A: SCR is the Sartin Class Rating. A slight improvement over that last Class Rating improvement which was a slight improvement over the one all clients can read *all about* in your Basic Manual (the yellow manual). Essentially it offers the combined values of Average Purse Value (APV), Earnings per Start and In-The-Money Finishes within the framework of a single number.

Q: I'm looking at some horses on my computer screen. One has a 75 SCR the other a 45. What's the difference? Which is best?

A: The difference is 30. The 75 is best BUT that does not mean it is the best horse, only that it has the higher class rating. **YOU MUST** use your entire program to determine the contenders that are over-all best. **ANYONE** who thinks that they can pick horses by *any* kind of class rating alone is deluding themselves.

Class is just a numerical measurement determined primarily by man-made factors. Certain aspects of numerical class can help eliminate certain contenders but does not pick winners, per se. Like Speed Ratings, Beyer Numbers, or any other numerical rating designation, **CLASS** is just another tool in a holistic process.

And finally a question from a client who is not familiar with some of our terminology. He asks about EP, SP, FX, and FW. I should refrain from answering these because they are defined in the basic yellow manual (that's the one you all get with membership). He also asks about %MED, Total Energy, Hidden Energy, Late Energy, and Median Energy, MUV and UXR. Those I will answer gladly:

EP - Velocity (or Energy) Early Pace. Pace to the 2nd Call in all programs except Quad Rater where it is the Chaos Formula for the First and Second Fractions, AVERAGED (sort of).

SP - Velocity (or Energy) of the 2nd Call plus Third Fraction, AVERAGED.

FX - Factor X. The 1st and 3rd Fractions, AVERAGED.

FW - Early and Sustained Pace, AVERAGED.

%MED - The percentage of a horse's Total Energy to the 2nd Call - or in Quad-Rater, a Chaos Formula percentage of total energy used in the 1st and 2nd fraction, AVERAGED.

TOTAL ENERGY - The energy expended in a horse's effort based on fractional velocity or energy expended from start to finish.

HIDDEN ENERGY - Energy (or velocity) of the 2nd and 3rd Fractions AVERAGED.

LATE ENERGY - Energy (or velocity) of the 3rd Fraction.

MEDIAN ENERGY - The Energy equivalent of Early Pace (EP).

MUV - Match Up Variegate. The lower the number, the longer a contender is likely (based on your entries) to maintain dominance over the rest of the field. UXR numbers can be evaluated by distance and surface to determine the numerical range from whence come winners and in-the-money horses.

UXR - Units of Energy needed to recover in order to match the Dream Race. It is the combination of EMUV and SMUV and measures an animal's Dream Race Deficiencies Early, (EMUV) Sustained (SMUV), and Total (UXR).

UXR can and should be evaluated in the same manner as MUV. Each is part of the Thoromation sector of our new Factor Evaluator program.

And that's the name of that tune.

THE MATCH UP DEFINED

BY JIM BRADSHAW

A race is a Single Unified Force Field producing Quantum Results – NOT from a MODEL, but through Self-Interacting Dynamics of the horses making up the field.

Within that Unified Field there is a continuum of PROBABILITY distribution for all possible measurements of the functions of incremental race times based on potential ENERGY distribution and frequency of multiple interaction of horses within the unique force field of each single race as perceived from information contained in the Daily Racing Form.

...now do you see where I get all those funny words?
Doc

THE SARTIN METHODOLOGY ANNOUNCES

FACTOR EVALUATOR

A MODELING/PROFILING SPREADSHEET COMPUTER PROGRAM
DESIGNED EXCLUSIVELY FOR SARTIN METHODOLOGY PROGRAMS
NOW FULLY AUTOMATED - THE COMPUTER DOES THE WORK!

YOU READ ABOUT IT IN THE FOLLOW UP...

FACTOR EVALUATOR 2A -With this proven, thoroughly tested key to higher profits, you can determine precisely which of your computer readouts to use in your wagering decisions for WIN, PLACE and SHOW... and for Exactas & Trifectas.

FACTOR EVALUATOR 2A -No more confusion over readout interpretation. NO MORE Firsts and Thirds in your Exacta boxes...no more missing Trifectas because you left out the Show horse.

FACTOR EVALUATOR 2A -Regardless of which Sartin program you use, Factor Evaluator will provide you only with the *proven, viable* factors that produce an abundance of horses that WIN, PLACE or SHOW.

FACTOR EVALUATOR 2A -Includes a special Option Screen for YOUR readout selections.

FACTOR EVALUATOR 2A -Has none of the complex, difficult instruction procedures common to commercial spreadsheet programs!

"I've both purchased and been given a number of expensive spreadsheet programs. All were difficult to load and even more complicated and frustrating to use. I've designed THIS ONE for those who, like me, cannot comprehend those kinds of complex instructions. I sincerely and firmly believe every client should own this program..."

Then - get a complete Financial Summary of your wagers, expenses, your profit and your exact return of investment - all at the touch of a few keys - at the end of each day, or wagering period, **by track**, there is a dynamic feature called FINANCIAL SUMMARY. It is the bottom line revelation of what you spent and what you made. You merely enter all of your wagers: Win, Place, Show, Exacta, Trifecta, Pick Six, or other exotics - PLUS your little side-bets that are often so costly. Then you tell your computer how much you spent and it gives you your net for the day and your ROI compiled automatically by each wagering category so that you will know where your betting strength lies.

Anatomy of TWO Problem Races

Guest Analyst: Leo Vitali

Hawthorn Park - December 30, 1994

Leo Vitali from Illinois is a man of few words and fewer readouts.

I chose him as our guest analyst this time because, like so many others whose races we'll be using in the future, really came around to professional level skills in recent months.

It wasn't too long ago that he was writing me plaintive letters filed with questions. I don't recall being "Mr. Nice Guy" in my responses - something like the equivalent of "take two aspirin and call me in the morning." Actually it was, "The answers to ALL your questions are in the Follow Up and in the Quad-Rater and other manuals. Don't just subscribe, read the damned thing!"

I felt a bit chagrined when, after a short time not hearing from Leo, he wrote me this:

Dr. Sartin: I thought you might like to see these two long shots and Perfectas (Exactas) your Quad-Rater got for me. \$165 & \$307 plus a nice \$20 win bet on each of the winners. I also used Synergetic Match Up II with Quad as you suggested.

Leo's analysis of these races can be found by simply reviewing his readouts. He followed the contender/pace line selection guidelines as instructed from previous Follow Ups and the Quad Manual. Only once did he go back farther than three races and THAT horse did nothing, anyway. His current track, Hawthorne, seems to have no problem with short fields as we so often do in S. California. Leo had to look over a LOT of horses.

What Leo did, you can do. He had questions, yes. Just like many of YOU. HE took the responsibility of re-reading our material and found his answers. So can YOU.

6

6 Furlongs (1:08.1) MAIDEN SPECIAL WEIGHT. Purse \$15,400 (includes \$1,400 IAF). Fillies and mares, 3 and 4-year-olds. Illinois registered, conceived and/or foaled. Weights: 3-year-olds, 118 lbs. 4-year-olds, 120 lbs.

DOC COMMENTS:

I am always pleased to see a client take the bull by the horns and, despite all the mainstream advice to the contrary, follow what I prescribed and WIN \$\$\$.

You'll note that the 6th race was a Maiden Special Weight with one first time starter. Okay to handicap (almost said Okay to Play because it rhymes). Look at the LOW Speed Ratings. Spencer can almost run that fast. Makes contender selection easier, however, despite the \$21.80 Win Payoff. Note, too, that Leo didn't balk at just following my prescription to wager on his 3rd Adjusted choice (9th race) across the board and in the Perfecta (Exacta).

In the 9th race Leo had to go a little deeper to get his \$22.60 winner. It *did not* come up at all on the RAW graphs but was 3rd on the AUTO ADJUST. The \$7.20 Place horse that keyed the big Perfecta was tops on all readouts. That's *by design* so you can win *more* Exotics since finding Place horses seems to be most client's biggest problem (Avis vs Hertz complex).

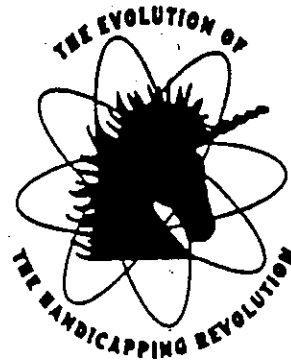

In S. California, when normal weather conditions prevail, Cigar Graph Adjustments seem to be not UNimportant, but *less* important than they are at Hawthorne and other tracks where weather and shippers are so often a big factor. Leo learned that from *evaluating factors* that won, placed and showed at his track(s).

This is why I'm so keen on everyone getting the Factor Evaluator and the reason it's selling for such a low price. Its use will make *all* clients aware of the differing factors that dictate which horses will win and place and show. It's an important step toward PROFIT.

Learn while you drive, exercise, relax!

1. The first step in the research process is to identify the research problem.

2. The second step is to conduct a literature review.

3. The third step is to develop a research hypothesis.

4. The fourth step is to design the research study.

5. The fifth step is to collect data.

6. The sixth step is to analyze the data.

7. The seventh step is to interpret the results.

8. The eighth step is to write the report.

9. The ninth step is to present the findings.

10. The tenth step is to conclude the study.

11. The eleventh step is to disseminate the findings.

12. The twelfth step is to evaluate the research process.

13. The thirteenth step is to reflect on the experience.

14. The fourteenth step is to plan for the future.

15. The fifteenth step is to end the study.

16. The sixteenth step is to review the literature.

17. The seventeenth step is to develop a research plan.

18. The eighteenth step is to collect data.

19. The nineteenth step is to analyze the data.

20. The twentieth step is to interpret the results.

21. The twenty-first step is to write the report.

22. The twenty-second step is to present the findings.

23. The twenty-third step is to conclude the study.

24. The twenty-fourth step is to disseminate the findings.

25. The twenty-fifth step is to evaluate the research process.

26. The twenty-sixth step is to reflect on the experience.

27. The twenty-seventh step is to plan for the future.

28. The twenty-eighth step is to end the study.

29. The twenty-ninth step is to review the literature.

30. The thirtieth step is to develop a research plan.
